

 CURRENT STUDENTS · SERVICE EXPERIENCE

The end-to-end student experience

An alignment discussion on overlaps across our current-students websites

For discussion · June 2026

■ About this session

Our current-students content lives across many websites — the central hub, nine faculties and three schools. Students move between them, end to end.

This is an alignment conversation: where do these experiences overlap, what is already underway to address them, and what might we do together.

This pack is a discussion guide — not a set of recommendations. The data sets the scene; the questions are ours to work through.

TODAY'S TOPICS

Course planning

Employability

Faculty service requests

Applications for further study

■ What students are trying to do

Students don't experience our websites as 'central' or 'faculty' — they have needs that run across the whole year, and they cross between sites as they go.

To discuss: Where in this journey do students cross between websites most — and where does that help or hinder them?

■ The shared landscape

A full content scan of the current-students estate — the central hub plus nine faculties and three schools. The same student need is often served in more than one place; some content is genuinely discipline-specific, and some is shared.

1,161

pages of current-students content

13

separate websites

6

different web-address patterns

Central hub · Architecture, Building & Planning · Arts · Business & Economics · Education · Engineering & IT · Fine Arts & Music · Law · Medicine, Dentistry & Health Sciences · Science — plus separate Business School, Biomedical Sciences and Dental school sites.

Descriptive only — a scan of what exists and where, not an assessment.

■ A lens for today: overlap

Overlap isn't automatically a problem. Sometimes it is helpful local context; sometimes it is duplicated effort or mixed messages. For each topic today, we will look at where the content sits — then ask whether the overlap is intentional, and whether it helps or hinders the student.

■ Overlap at a glance

Where each topic is provided today, across the estate. The same need often appears in several places.

Topic	Central hub	Faculties	Schools	Cross-linked?
Course planning	Planner + Handbook	Every faculty	MBS, Biomedical	Partly
Careers	Central platform	8 of 9	MBS	Rarely
Placements / WIL	—	Every faculty	Some	—
Service requests	Stop 1 + processes	Student centres + forms	Some	Mixed
Further study	Some	Faculties	Some	Mixed

To discuss: Is this the right picture? Where is the overlap intentional and helpful — and where is it accidental?

■ Course planning

WHAT THE DATA SHOWS

- Around 207 pages relate to course planning — across the central hub (My Course Planner, the Handbook) and every faculty.
- Two schools — Business (MBS) and Biomedical Sciences — hold about 46% of it, a level below their faculty.
- It spans many forms: degree sample plans, subject-selection guides, breadth and diploma options, prerequisites and quotas, honours and research-project planning.
- The central planning tool is sometimes re-presented on faculty sites, and the section is reached through several different web addresses.

TO DISCUSS

- Where do students actually start when planning their course?
- Which parts are genuinely degree-specific, and which are shared?
- What is already underway to align course planning?
- What would make course planning feel seamless to a student?

■ Employability

WHAT THE DATA SHOWS

- Around 351 pages relate to employability — roughly 144 on careers and 207 on work-integrated learning (placements, internships).
- Careers content appears in 8 of 9 faculties, plus Melbourne Business School, alongside the central careers platform.
- Today the central and faculty careers content largely do not link to each other; several near-identical 'Employability in [discipline]' pages exist.
- Work-integrated learning sits entirely with faculties; there is no central placements page.

TO DISCUSS

- How does a student discover careers and placement support — central, faculty, or both?
- Where does the current split serve students well, and where does it confuse?
- What is already in flight here (for example, the Employability Service Integration work)?
- What would a joined-up employability journey feel like?

■ Faculty service requests

WHAT THE DATA SHOWS

- Students request help — special consideration, forms, advising, enrolment changes — through several channels: Stop 1 centrally, faculty student centres, and around 210 faculty forms and admin pages.
- Some requests are university-wide processes (special consideration, leave of absence, fees); others are specific to a faculty or school.
- Across the estate, about 227 pages touch enrolment, exams, fees and special consideration — and the same process is often described in more than one place.
- Where a student starts (central or faculty) often differs from where the request is actually handled.

TO DISCUSS

- When a student needs to request something, where do they go first — and where do they end up?
- Which service requests are genuinely faculty-specific, and which are university-wide?
- What is underway to streamline how students request service?
- Where are the hand-offs that frustrate students or duplicate effort?

■ Applications for further study

WHAT THE DATA SHOWS

- 'What next' content spans honours, graduate and coursework pathways, course transfers, concurrent diplomas, and research candidature.
- It sits across faculties and schools — for example faculty honours pages and graduate-pathway guides.
- It overlaps with admissions / future-students messaging, and with course-planning content.
- Research candidature alone is around 240 pages, largely held by faculties.

TO DISCUSS

- How does a current student find out about further study options?
- Where should 'current student' stop and 'future student / admissions' begin?
- What is already underway to support student progression?
- How do we make the path to further study clear for current students?

■ One student, four topics

Maya · second-year Science undergraduate · one semester

1 Course planning — Plans her second-year subjects

Hub planner + Science course guides

2 Employability — Looks for a summer internship

Science WIL pages — nothing central

3 Service request — Applies for special consideration

Starts at Stop 1 → handled by the faculty

4 Further study — Starts weighing up Honours

Science Honours info (would compare faculties)

In one semester Maya crosses the central hub, her faculty site and a school site several times — with no single thread tying it together. **To discuss: where in this one journey would small changes make the biggest difference?**

■ Capturing today's discussion

We'll capture the conversation here — to revisit together, not to conclude today.

Overlaps to align	Already in flight	Worth exploring	Owners / next step

■ Where to from here — together

Not conclusions — questions to take forward.

- Across the four topics, what did we agree are the real overlaps?
- What is already in flight that we could connect or build on?
- For each topic — what is one thing we'd like to explore next, and who is involved?
- How will we keep aligned as this work continues?

■ Appendix

Backup detail — per-faculty data, for reference if the discussion calls for specifics.

■ Who holds what — pages by faculty and topic

Faculty / school	Course planning	Careers	Placements / WIL	Forms / admin	Research candidature
Arts	6	22	13	16	28
ABP / MSD	29	13	9	26	43
Business & Economics	8	2	0	1	8
Education	20	23	24	4	1
Engineering & IT	2	19	17	1	31
Fine Arts & Music	6	4	5	22	12
Law	11	24	36	66	86
Medicine, Dentistry & HS	4	13	96	36	2
Science	26	4	2	2	10
Melbourne Business School *	58	0	0	1	13
Biomedical Sciences *	37	17	4	34	4
Dental School *	0	0	0	3	3

* school-level site (runs its own current-students section below its faculty). Page counts are descriptive — they show where content sits, not its quality. Source: full crawl, June 2026.
