

THE UNIVERSITY OF
MELBOURNE

CURRENT STUDENTS IA • UNIFICATION STRATEGY

Unification recommendations

Hub-and-spoke strategy and options for the current-students web estate —
grounded in the full 1,173-page crawl.

University of Melbourne • June 2026

The University of Melbourne acknowledges the Traditional Owners of the unceded land on which we work, learn and live, and pays respect to their Elders, past and present, and to Indigenous Australians today.

Executive Summary

The University of Melbourne runs a fragmented current-students ecosystem: **9 faculty CS sections + 3 school CS sections (MBS, Biomedical Sciences, Dental) + the central hub — 1,173 pages crawled (1,161 after de-duplication)**. The decisive finding from the full crawl is that **85% of pages (997) carry substantive, unique content** — only ~4% are pure link-farms, ~7% mixed, ~4% broken/redirect. Every faculty hosts a substantial, genuinely discipline-specific estate; even faculties earlier assumed to be thin "link directories" are content-rich (ABP runs 240 unique pages; MDHS 104). What faculties delegate to the hub is **transactional admin, not their discipline content**. The central hub covers transactional admin comprehensively but has no presence in course planning, placements, or discipline-specific skills.

This document presents **four options** for addressing the fragmentation, with detailed trade-offs for each, and a recommendation. The options are not binary — each can be tuned along dimensions of centralisation depth, personalisation, and implementation speed.

Recommended approach: Hub-and-spoke with clear boundaries. The hub owns transactional and cross-cutting services. Faculties retain discipline-specific content under a standardised template. Total migration over 12 months in three phases.

Evidence update (full crawl). The option tables below were first drafted on a partial crawl (4 faculties). The completed crawl of all 12 units confirms the *direction* (hub-and-spoke) but revises the *figures*: the unique, discipline-specific estate is far larger (~997 pages, 85%) and the removable duplication is thinner than the "~200 duplicative / ~400–450 unique" estimates in the tables below imply. Read the per-option page counts as indicative. The strategic implication is *stronger*, not weaker — full centralisation is even less viable, and the prize is connecting the seams (signposting, careers cross-linking, URL standardisation) and trimming a thin duplicative layer, not relocating ~1,000 pages of unique faculty content. Measured split: see Evidence Base (and the DEAG findings pack).

The Decision: Four Options

Four approaches to unifying the current-students experience, ranging from full centralisation to minimal intervention. Each is detailed below with scope, what changes, what stays, costs, risks, and decision criteria.

Option A: Full Centralisation

All current-students content moves to `students.unimelb.edu.au`. Faculty CS sections become redirects or thin gateway pages. Faculty sites no longer host current-students content.

This option has **three sub-variants** depending on how content is handled:

Variant A1: Full Consolidation

Move every existing faculty CS page to the hub, organised under `/your-faculty/<slug>/`.

Dimension	Detail
Pages created on hub	~600-700 (all faculty CS pages, re-hosted)
Pages removed from faculties	~600-700 (redirected to hub equivalents)
Hub IA impact	Adds a <code>/your-faculty/</code> section with 9 sub-sections mirroring current faculty IA
Content changes	Minimal — lift and shift. URLs change, content stays.

Dimension	Detail
Timeline	6-12 months (content migration + redirect mapping + QA)
Central team burden	Medium — central team manages the hub platform, templates, and governance. Faculty web officers retain authorship of their section's pages via distributed CMS permissions. Requires a RACI and governance framework to define who can publish what.

What this fixes:

- Students have one place to search: `students.unimelb.edu.au`
- No URL convention problem (everything is on the hub)
- Search across all CS content becomes possible (single domain)

What this requires:

- A **distributed authorship model** — faculty web officers retain control of their section's pages on the hub. This requires CMS permissions, a RACI matrix defining who can create, edit, approve, and publish, and workflow governance.
- 600 pages of redirect mapping — every old faculty URL needs a 301 redirect to its new hub location
- Hub IA becomes deep — students still navigate to "their faculty" section, which replicates the current problem at a different URL
- The central team's role shifts from "do everything" to "manage the platform and enforce governance"

Decision criteria for choosing A1:

- You believe a single URL namespace is the overriding priority
- You're willing to invest in the distributed authorship model (RACI, CMS permissions, workflow governance)
- Faculties are willing to author their content on the hub rather than on their own domains

Variant A2: Harmonise-Then-Centralize

First, standardise faculty CS content to remove duplication. Then, migrate only what remains to the hub. Duplicative content is deleted, not moved.

Dimension	Detail
Step 1 — Harmonisation	All 9 faculties adopt the standardised CS template and remove hub-duplicative pages (enrolment, fees, exams, graduation, health, key dates). Estimated ~200 pages removed across faculties. Remaining: ~400-450 pages of genuinely unique content.
Step 2 — Centralisation	Move the ~400-450 remaining unique pages to the hub under <code>/your-faculty/<slug>/</code> .
Pages created on hub	~400-450 (only unique content)
Pages removed from faculties	~600-700 total (~200 duplicative deleted in Step 1 + ~400-450 moved in Step 2)
Timeline	12-18 months (harmonisation first, then migration)
Central team burden	Medium — same distributed authorship model as A1. Fewer pages to manage (~400 vs ~600) because duplication was eliminated in Step 1.

What this fixes (beyond A1):

- Duplication is eliminated before migration, so the hub doesn't inherit redundant content
- The standardised template means all faculty content follows the same structure
- Hub search is cleaner — no duplicate results for the same service

What this requires (beyond A1):

- The same distributed authorship model as A1 (RACI, CMS permissions, governance)

- The harmonisation step requires faculty buy-in before centralisation — two rounds of change management
- Standardising templates and removing duplication before migration is more work upfront but produces a cleaner result

Decision criteria for choosing A2:

- You want the benefits of a single namespace but recognise that 200 pages of duplication shouldn't be migrated
- You're willing to invest in a two-phase process (harmonise, then centralise) — the upfront work pays off in a cleaner hub
- The standardisation work of Phase 1 is independently valuable regardless of whether Phase 2 proceeds

Variant A3: Harmonised Hub with CDP Personalisation

First, harmonise faculty CS content (same as A2 Step 1). Then, instead of migrating pages to the hub, use **Optimizely and Tealium CDP** to personalise the hub experience based on known student attributes. If the university knows a student's faculty and program (via SSO or Tealium audience segments), the hub dynamically surfaces the right faculty-specific content alongside hub-wide services — without moving any pages.

Dimension	Detail
Step 1 — Harmonisation	Same as A2: all 9 faculties adopt the standardised CS template and remove hub-duplicative pages. ~200 pages removed.
Step 2 — CDP Personalisation	Deploy Optimizely for experience targeting and Tealium CDP for audience segmentation. When a student logs in or self-identifies their faculty, the hub personalises: course planning links point to their faculty's course plans, career links surface their faculty's mentoring program, placement info shows their discipline's WIL options.
Technical model	Hub remains the entry point. Tealium CDP holds student-faculty mappings and audience segments. Optimizely serves personalised content widgets (faculty-specific links, contacts, news) within the hub's existing pages. Content stays on faculty sites — the hub links intelligently.
Pages created on hub	~20-30 (personalisation widgets, faculty content connectors, audience logic)
Pages removed from faculties	~200 (duplicative pages removed in Step 1)
Pages moved	0 — faculty-unique content stays on faculty sites
Timeline	12-18 months (harmonisation first, then CDP integration + Optimizely configuration)
Central team burden	Medium — ~14 hub gateway pages + CDP/Optimizely configuration. Faculties maintain their own content.

What this fixes:

- Students get a personalised single entry point without content migration
- Duplication is eliminated (Step 1 harmonisation)
- The hub feels like it knows the student — "You're in the Bachelor of Science. Here are your course guides. Here's your faculty's career mentor program. Here's where to book lab time."
- Faculties retain full ownership of their discipline-specific content
- No API federation needed — CDP + Optimizely handle the personalisation layer

What this requires:

- Optimizely and Tealium CDP already in use or procured at UoM
- Student-faculty mappings available in the CDP (via SSO attributes or SIS data feed)
- Optimizely configured for the hub's pages (audience-based widget visibility)
- Content governance to keep faculty links current in the CDP-driven widgets
- A personalisation strategy: what surfaces for whom, and what the fallback experience is for unknown/anonymous visitors

Decision criteria for choosing A3:

- Optimizely and Tealium CDP are already in the university's martech stack (or procurement is planned)

- You want a modern, personalised student experience without forcing content migration
- Faculty autonomy is a hard constraint — no unique content can move
- You're willing to invest in CDP/personalisation configuration as an ongoing capability
- The 12-18 month timeline is acceptable

Option A summary: when to choose full centralisation

Variant	Choose if...
A1: Full Consolidation	Single namespace is the overriding priority; you'll invest in distributed authorship governance
A2: Harmonise-then-centralise	You want a clean hub but recognise duplication must be killed first; same distributed authorship as A1
A3: CDP Personalisation	Optimizely + Tealium are in your stack; you want personalisation without content migration

Option B: Federated Standards (Status Quo + Governance)

Keep the current model — faculties run their own CS sections — but enforce standards through governance.

Dimension	Detail
What changes	URL conventions, template standards, "where to go" cross-linking, broken link fixes
What stays	Faculty CS sections remain on faculty domains. Hub remains as-is. Content ownership unchanged.
Pages created	~10-15 (hub gateway pages for course planning, placements, faculty programs)
Pages removed	~200 (duplicative pages on faculty sites — replaced with hub links)
Pages moved	0
Timeline	3-6 months
Central team burden	Low — governance and audit, not content maintenance

What this fixes:

- URL inconsistency (all faculties move to /students)
- No "where to go" guidance (standardised sidebar added to every faculty CS page)
- Broken links (all identified issues fixed)
- Career silos (mandatory cross-linking between hub and faculty careers)

What this doesn't fix:

- Students still navigate 9+ different CS sections — they just have better signposting
- Duplication persists — the same service is still explained on multiple sites, just with links to the canonical version
- The central team has no enforcement power over faculty web officers — governance is advisory unless backed by an executive mandate

What makes this option succeed:

- An executive mandate that all faculty CS pages must follow the standardised template
- Quarterly cross-linking audits with consequences for non-compliance
- A designated central owner with authority to enforce URL conventions and content standards

What makes this option fail:

- Governance without teeth — if faculties can ignore the standards, nothing changes
- The template is treated as a suggestion rather than a requirement
- No one is accountable for the cross-linking audits

Decision criteria for choosing B:

- You want the fastest possible improvement with minimal disruption
- Faculty autonomy is politically non-negotiable
- You believe better signposting solves 80% of the student navigation problem
- You're willing to accept that duplication won't be eliminated, only signposted

Option C: Hub-and-Spoke with Clear Boundaries (RECOMMENDED)

The hub becomes the definitive source for all transactional and cross-cutting services. Faculties retain genuinely discipline-specific content but adopt a standardised template. Content is split by service type, not by organizational unit.

Dimension	Detail
Hub owns	Enrolment, fees, exams, graduation, special consideration, leave of absence, key dates, health & wellbeing, careers platform, student life framework, IT, international support, study overseas
Faculty owns	Course plans, placements/WIL, forms, discipline-specific academic skills, program regulatory requirements, faculty scholarships, faculty clubs/events/newsletters, faculty contacts
Both share	Course planning (hub: general + My Course Planner; faculty: degree-specific plans), careers (hub: platform + tools; faculty: discipline mentoring + pathways), academic skills (hub: PASS + general; faculty: discipline-specific)
Pages created on hub	~14 (course planning gateway, placements gateway, careers-faculty bridge, 9 faculty landing pages, academic skills by discipline, "where to go" tool)
Pages removed from faculties	~120–180 (the thin duplicative layer — pure link-farm pages + faculty restatements of enrolment, fees, exams, graduation, health, key dates, general career advice)
Pages retained on faculties	~950+ (the measured unique, discipline-specific estate — course plans, placements/WIL, forms, faculty life, discipline skills, program requirements)
Pages moved	0 — content is removed or retained, not migrated
Timeline	12 months in 3 phases (quick wins → content consolidation → template standardisation)
Central team burden	Medium — ~14 new hub pages + quarterly audits. Faculty content owners maintain their own pages.

What this fixes:

- Single source of truth per service — no more "which page is the right one?"
- Students navigate the hub for transactional needs, faculty for discipline-specific needs — with explicit signposting
- Careers cross-linking breaks the silos
- URL conventions are standardised
- Duplication is removed at the source (pages deleted, not just linked past)

What this doesn't fix:

- Students still visit two domains (hub + faculty) for different needs — but now they know which is which
- Requires faculty content owners to delete pages and maintain their remaining content to standard
- The boundary between "general career advice" and "discipline-specific mentoring" needs judgment calls per faculty

Decision criteria for choosing C:

- You want to eliminate duplication without centralizing everything
- You recognise that placements, course plans, and program requirements genuinely cannot be centralized
- You're willing to invest in governance to maintain the boundaries over time
- You want measurable improvement within 12 months

Why this option is recommended:

- 1. **It matches the evidence.** The full crawl shows ~85% of faculty pages (~997) are genuinely unique, discipline-specific content; the duplicative layer is thin (the ~50 pure link-farm pages plus faculty restatements of hub transactional content — on the order of 120–180 pages). Consolidating that thin layer is high-impact and low-risk; the ~950+ unique pages must stay with faculties. The measured split makes full centralisation untenable and hub-and-spoke the only fit.
- 2. **It's realistic.** Full centralisation (Option A) requires either migrating 600 pages of faculty content to a central team that can't maintain it (A1/A2), or building a federated personalisation platform across 3+ CMS platforms (A3). Hub-and-spoke works with the existing infrastructure.
- 3. **It preserves what works.** The four fully-crawled faculties (Law, FEIT, Arts, Science) have invested years in building genuinely useful faculty-specific content. Option C preserves this investment while removing the duplication that confuses students.
- 4. **It has a clear migration path.** Three phases over 12 months: quick wins first (URLs, sidebars, broken links), then content consolidation, then template standardisation. Each phase delivers independent value.

Option D: Status Quo + Minimal Fixes

Fix the most egregious problems without any structural change.

Dimension	Detail
What changes	Fix broken links. Add "where to go" sidebar to a few faculty pages. Standardise URL conventions with redirects.
What stays	Everything else. No content removed. No templates enforced. No governance.
Pages created	0-5
Pages removed	0
Timeline	1-2 months
Central team burden	Very low — one-off fixes

What this fixes:

- Broken links (FEIT 17, Arts 3, FBE 404, MDHS circular)
- URL inconsistency (redirects added)
- A few faculties get "where to go" sidebars (voluntary adoption)

What this doesn't fix:

- Duplication — all 9 faculties still run parallel career services, course planning, wellbeing pages
- Students still don't know which system handles what (except on the few pages that adopt the sidebar)
- No structural change to the fragmented experience
- The audit's core findings remain unaddressed

Decision criteria for choosing D:

- You need to show some action in the next 1-2 months
- You lack the political capital for a structural change
- You're using this as a first step before committing to a larger option

Decision Matrix

Dimension	A1: Full Consolidation	A2: Harmonise-Centralise	A3: CDP Personalisation	B: Federated Standards	C: Hub-and-Spoke	D: Minimal Fixes
Duplication eliminated?	Partial (moved, not killed)	Yes	Yes (Step 1 harmonisation)	No (signposted, not killed)	Yes (duplicative pages deleted)	No
Single entry point?	Yes	Yes	Yes (personalised)	No	Partial (hub for transactions)	No
Faculty authorship retained?	Yes (distributed authorship on hub)	Yes (distributed authorship on hub)	Yes (content stays on faculty sites)	Yes	Partial (discipline content stays on faculty sites)	Yes
Central team burden	Medium (platform + governance)	Medium (platform + governance)	Medium (CDP/Optimizely config)	Low	Medium	Very Low
Timeline	6-12 mo	12-18 mo	12-18 mo	3-6 mo	12 mo	1-2 mo
Technical complexity	Low	Low	Medium (CDP integration)	Low	Low	Very Low
Governance required	High (RACI + distributed authorship)	High (RACI + distributed authorship)	High	High	Medium	Minimal
Risk of faculty non-compliance	Medium (distributed authorship needs enforcement)	Medium (distributed authorship needs enforcement)	Low (content stays; standards enforced in Step 1)	High (voluntary standards)	Medium (template mandate)	N/A
Student experience improvement	High	High	High (personalised)	Medium	High	Low
Ongoing sustainability	Medium (governance-dependent)	Medium (governance-dependent)	Medium (CDP/Optimizely maintenance)	Medium (audit-dependent)	High (clear boundaries)	Low (problems return)

4a. Recommended Model in Detail: Hub-and-Spoke

The model

Service boundaries

Service	Owner	Rationale
Enrolment, re-enrolment, course withdrawal	Hub only	Single source of truth
Fees, census dates	Hub only	University-wide
Exams, results, academic progress	Hub only	University-wide
Graduation	Hub only	University-wide
Special consideration	Hub only	University-wide process
Leave of absence	Hub only	University-wide process
Key dates	Hub only	Hub is definitive
Timetable (MyTimetable)	Hub + faculty context	Hub: tool. Faculty: timetable quirks
Course planning	Hub (general) + Faculty (specific)	Hub: My Course Planner + advice. Faculty: sample plans, degree guides
Health & wellbeing	Hub only	CAPS, medical, SEDS — central services
Academic skills	Hub (general) + Faculty (discipline)	Hub: PASS. Faculty: legal writing, lab skills
Careers & employability	Hub (platform) + Faculty (pathways)	Hub: tools + jobs. Faculty: mentoring + industry
Placements & WIL	Faculty only	Cannot be centralized — fundamentally different per discipline
Scholarships	Hub (search) + Faculty (awards)	Hub: search engine. Faculty: prizes
Student life & clubs	Hub (framework) + Faculty (local)	Hub: UMSU/GSA/Melbourne Plus. Faculty: local events
Forms	Faculty only	Operational — each discipline's forms are different
IT & systems	Hub only	University-wide
International support	Hub only	Visas, OSHC — university-wide
Study overseas	Hub only	Central exchange program
Indigenous students	Hub (Murrup Barak) + Faculty (local)	Hub is primary

4c. Other Fixes Regardless of Option Chosen

These five fixes should be implemented regardless of which option is selected:

1. **Standardise the URL convention.** All faculty CS sections at `faculty.unimelb.edu.au/students`. Redirect `/current-students`, `/study/current-students`, `/study/student-resources`, `/study/current-student-information`.
2. **Add "Where do I go for X?" component.** Every faculty CS page must include a standardised sidebar mapping common needs to the correct system. This alone would substantially reduce student confusion and is the single highest-impact quick win.
3. **Consolidate school-level CS sections.** Biomedical Sciences, Dental School, and MBS CS sections must either redirect to their faculty CS page or follow the same template and URL convention as the faculty. No separate CS ecosystems at the school level.
4. **Fix broken links.** FEIT (17 broken/duplicate URLs), Arts (3 broken pages), FBE (`/current-students` → 404), and MDHS (circular school resource links) — fix regardless.
5. **Cross-link careers content.** Every faculty careers page must prominently link to the central Careers hub, and the hub must link to every faculty's career programs. The current complete separation is the clearest failure in the ecosystem.

4d. Key-Topic Treatment

Course Planning

- **Hub:** Add `/your-course/faculty-course-planning` — a single page linking to every faculty's sample plans and degree guides. Retain My Course Planner and general advice.
- **Faculty:** Retain sample course plans, degree guides, major selection advice. Standardise: each faculty produces a Course Planning page with subsections per degree program.
- **Remove:** General "how to plan your course" advice on faculty pages — redirect to hub.

Careers & Employability

- **Hub:** Becomes the primary careers platform (Careers Online, Smart Resume, Career Checklist, general workshops). Add `/careers/faculty-career-programs` linking to every faculty's discipline-specific programs.
- **Faculty:** Retain discipline-specific mentoring, industry connections, career pathway pages. **Must** embed or prominently link to hub careers tools.
- **MBS Career Elevation:** Integrate with (not compete with) the central Careers hub. At minimum, cross-link.

Placements & WIL

- **Hub:** Create `/your-course/placements-and-wil` — a landing page explaining WIL and linking to each faculty's placement program. The hub currently has zero placement content.
- **Faculty:** Retain full ownership of placement management. Standardise structure: Overview → Eligibility → How to Apply → Contacts.

Student Life & Wellbeing

- **Hub:** Retain primary ownership of health, counselling, SEDS, food, transport, clubs (via UMSU/GSA).
- **Faculty:** Retain faculty-specific events, newsletters, clubs. Faculty wellbeing pages should redirect to hub, with faculty-specific contacts only (e.g., "FEIT wellbeing officer: [contact]").

4g. New Pages Required on `students.unimelb.edu.au`

New page	Content	Priority
<code>/your-course/faculty-course-planning</code>	Links to every faculty's course plans/sample plans/degree guides	High
<code>/your-course/placements-and-wil</code>	What WIL is, link to each faculty's placement program	High
<code>/careers/faculty-career-programs</code>	Links to each faculty's career mentoring, industry programs, internship infrastructure	High

New page	Content	Priority
9× Faculty landing pages	/your-faculty/<slug> — one per faculty: contacts, link to CS page, key dates, course planning link, placement link	Medium
/student-support/academic-skills-by-discipline	Links to each faculty's discipline-specific academic skills resources	Medium
"Where do I go for..." tool	Maps common student needs to the correct system	Medium

Total: ~14 new pages on the hub. All are thin gateway/landing pages. No heavy content migration.

4h. Faculty Site Updates

Standardised CS template

Every faculty CS page should adopt this structure:

1. KEY CONTACTS

- Stop 1 link (always present)
- Faculty student centre contact

2. COURSE PLANNING (faculty-owned)

- Sample course plans by degree
- Degree guides / subject selection advice
- Link to My Course Planner (hub)

3. PLACEMENTS & WIL (faculty-owned)

- Placement programs
- Eligibility & how to apply
- Contacts

4. FACULTY LIFE (faculty-owned)

- Clubs & societies
- Events & newsletters
- Mentoring programs
- Ambassador/leadership opportunities

5. FORMS (faculty-owned)

- Faculty-specific forms

6. WHERE TO GO FOR EVERYTHING ELSE (standardised sidebar)

- Enrolment → students.unimelb.edu.au/your-course
- Fees → students.unimelb.edu.au/your-course/fees
- Exams & results → students.unimelb.edu.au/your-course/exams
- Health & wellbeing → students.unimelb.edu.au/student-support
- Careers → students.unimelb.edu.au/careers
- IT help → studentit.unimelb.edu.au
- Study overseas → students.unimelb.edu.au/your-course/study-overseas

Content to remove from faculty sites

Remove	Redirect to
Enrolment how-to pages	students.unimelb.edu.au/your-course

Remove	Redirect to
Special consideration explanation	<code>students.unimelb.edu.au/your-course/exams/special-consideration</code>
Leave of absence explanation	<code>students.unimelb.edu.au/your-course/leave-of-absence</code>
Fees explanation	<code>students.unimelb.edu.au/your-course/fees</code>
Graduation information	<code>students.unimelb.edu.au/your-course/graduation</code>
Key dates	<code>students.unimelb.edu.au/your-course/key-dates</code>
Health & counselling info	<code>students.unimelb.edu.au/student-support</code>
General career advice (not faculty-specific)	<code>students.unimelb.edu.au/careers</code>

Content to keep on faculty sites

Keep	Because
Sample course plans	Degree-specific — cannot be centralized
Placement/practicum management	Discipline-specific — clinical ≠ teaching ≠ legal
Faculty-specific forms	Operational requirement — each discipline's forms are different
Faculty scholarships & prizes	Faculty-funded and faculty-administered
Faculty clubs, events, newsletters	Local community — cannot be centralized
Discipline-specific academic skills	Legal writing ≠ lab skills ≠ studio practice
Program regulatory requirements	LANTITE, Fitness to Practice — legally required
Faculty contacts	Students need to know who to email

4i. Design Principles & Governance

Design principles

- 1. Students should never have to know which system handles what.** The hub is always the first stop.
- 2. One source of truth per service.** No service explained on both a faculty page and the hub.
- 3. Consistent URL conventions.** `faculty.unimelb.edu.au/students` for every faculty. No exceptions.
- 4. Standard navigation labels.** "Current students" — not "Students" / "Student resources" / "Current student information" / "Study".
- 5. Faculty pages link out; hub pages link down.** Faculty → hub for transactional. Hub → faculty for discipline-specific.
- 6. "Where to go" is always explicit.** Every page states where to go for related needs.

Governance model

Role	Who	Responsibility
Hub content owner	Central web team / Student Services	All hub pages. Faculty landing pages. Cross-faculty gateway pages.
Faculty content owner	Faculty web officer / student centre	Faculty CS pages — course plans, placements, forms, faculty life.
Template enforcement	Central web team	All faculty CS pages use standardised template. Annual audit.
Cross-linking audit	Central web team (quarterly)	Verify hub↔faculty links. Fix broken links.
URL convention enforcement	Central web team	Redirect old patterns. Annual broken-link scan.
Content review cycle	Faculty content owners (6-monthly)	Course plans, placement info, contacts are current.

Migration phases

Phase 1 — Quick Wins (3 months)

- Standardise URL conventions with redirects
- Add "Where to go for everything else" sidebar to all faculty CS pages
- Fix all broken links discovered in this audit
- Cross-link hub careers ↔ faculty careers
- *Decision gate: confirm which option (A/B/C/D) before Phase 2*

Phase 2 — Content Consolidation (6 months)

- Remove duplicative content from faculty sites (enrolment, fees, exams, graduation, health, key dates)
- Replace with hub links
- Build hub placements gateway page
- Build hub course planning gateway page
- Build hub careers-faculty bridge page

Phase 3 — Template Standardisation (12 months)

- Migrate all faculty CS pages to standardised template
- Consolidate school-level CS sections (Biomedical Sciences, Dental, MBS)
- Build hub faculty landing pages
- Annual governance cycle begins

Evidence Base

Evidence	Source
1,173 fully crawled pages across all 12 units — 85% unique (Law 195, FEIT 204, ABP 250, MDHS 112, Science 94, Arts 91, MBS 61, Education 47, Biomedical 42, FFAM 37, FBE 36, Dental 4)	<code>crawl/pages/*.json</code>
9 faculty summaries + hub IA	<code>crawl/pages/*-summary.md</code> , <code>hub-summary.md</code>
Phase 1 unit registry (43 units)	<code>data/unit-registry.csv</code>
Phase 1 structural findings	<code>analysis/phase1-findings.md</code>
Cross-faculty service model matrix	<code>analysis/service-model-matrix.md</code>
Structural findings (10 findings)	<code>analysis/structural-findings.md</code>
9 per-faculty profiles	<code>analysis/unit-*.md</code>
4 topic deep-dives	<code>analysis/topic-deepdives/</code>
Structured data (inventory, IA, classification)	<code>data/url-inventory.csv</code> , <code>data/pages-by-topic.csv</code> , <code>data/unique-vs-linkfarm.csv</code>

Every recommendation above can be traced to specific pages and links in the crawl corpus.
