

THE UNIVERSITY OF
MELBOURNE

CURRENT STUDENTS IA · TOPIC EVIDENCE

Topic deep-dives

Content typology, distribution and consolidation verdict across 18 topics of the current-students estate (prose; full page lists in the source notes + CSV).

University of Melbourne · June 2026

The University of Melbourne acknowledges the Traditional Owners of the unceded land on which we work, learn and live, and pays respect to their Elders, past and present, and to Indigenous Australians today.

Eighteen topic notes covering the full current-students content estate (1,161 deduped pages across 9 faculties + 3 schools + the hub). Each note follows the same structure: intro · distribution table · content-type typology · legitimate-vs-hub-overlapping · recommendation · full per-faculty page-list appendix. Raw per-topic lists are in `_pagelists/`; structured data in `../.. /data/`.

The notes (by page count)

Topic	Pages	Verdict	Headline finding
subjects-timetable	319	mixed	Largest topic, but 64% is ABP/MSD's design-studio archive ; the rest is a thin hub-owned timetabling spine (MyTimetable, census, overloading) echoed by faculties + legit discipline subject catalogues.
orientation	289	inflated	FEIT holds 204 (71%) by nesting its whole estate under <code>/orientation/</code> paths; genuine orientation is a thin faculty-owned welcome layer.
transactional-admin	227	hub-owned	enrolment + exams/results + special-con + fees + library: only 6 of 227 pages sit on the hub domain ; faculty content is restatement/local-wrappers/noise — the estate's clearest consolidation target.
research-candidature	241	faculty-owned	Legit (milestones, studios, faculty funding) but inflated by ~70 Law researcher-profile pages; hub-own the candidature lifecycle spine, convert bios to a directory.
it-systems	235	artefact tag	78% is mis-classified FEIT content; genuine ~30–40 pages — faculty-owned only for physical labs/equipment loans; hub owns the Student IT / LMS / portal spine.
student-life	214	faculty-owned	Largely legit (clubs, mentoring, awards, enrichment); ~⅓ is internal bloat (MSD studio archive, Science committee rosters).
forms-admin	212	mixed	Concentrated in Law (66) + MDHS (70 pre-placement compliance); faculty forms hubs are legit, but offer-acceptance/enrolment/special-con admin overlaps the hub.
course-planning	207	faculty-owned	Degree-specific plans dominate; MBS + Biomedical = 46% ; thin hub-overlapping layer (generic advice, re-hosted My Course Planner).
placements-wil	206	faculty-owned	MDHS holds 47% (clinical compliance); near-zero hub overlap; the gap is discoverability (hub has no WIL front door), not duplication.
contacts-support	177	mixed	Most diffuse topic; ~half is Arts+Law restatements of hub wellbeing/equity/careers + duplicate/stub pages.
careers-employability	141	mixed	Legit core (regulated pathways, internship subjects, mentoring) beneath a heavily duplicated hub-overlap layer (7 near-identical "Employability in X" pages). <i>Deeper ESI analysis held separately in the employability workspace.</i>
scholarships	141	consolidate	Hub holds zero; FEIT 50%; mostly generic process scaffolding (rounds, T&Cs, FAQs, winner galleries) → consolidate into central <code>scholarships.unimelb.edu.au</code> .
international	135	mislabelled	~80% is faculty-owned outbound mobility (exchange, partnerships); genuine inbound support (visas/OSHC/ESOS) is absent and hub-owned.
graduation	125	misnomer	Almost no ceremony content — captures HDR candidature lifecycle + honours/awards; the hub-owned apply-to-graduate spine is missing here.
clubs-events	104	faculty-owned	Overwhelmingly faculty community content; only hub overlap is the generic club-admin wrapper + self-duplication.
wellbeing-health	87	mixed	Half is MDHS clinical-placement compliance (mis-tagged); genuine pastoral content is 6 near-duplicate "Wellbeing + Ambassadors" landings to collapse into one hub page.
inclusion-equity	49	consolidate	Noise-heavy (~45% false positives); genuine ~13 pages of Indigenous/equity/disability that parallel-reinvent the central service.
academic-skills	37	hub-overlapping	Only discipline-bound skills (legal research, academic English, thesis writing) are legit; generic landings duplicate the central service.

⚠ Data-quality caveat — topic counts are inflated by classifier artifacts

The full crawl's topic tags carry systematic noise; the **counts overstate real content** and the notes correct for it. Four recurring artifacts:

1. **MSD studio archive** (~700 near-identical past-studio pages) inflates *subjects-timetable* and *student-life*.
2. **FEIT path-nesting** (its whole estate under `/orientation/` , `/students/it...`) inflates *orientation* and *it-systems*.
3. **Law researcher-profile pages** (~70 GRD bios) inflate *research-candidature* and *inclusion-equity*.
4. **Tag mislabelling** — *international* is mostly outbound mobility; *graduation* is mostly HDR lifecycle.

These should be fixed at source (de-archive MSD studios; flatten FEIT path-nesting and URL-churn; convert researcher bios to a directory; fix Biomedical's 16 redirect stubs).

Cross-cutting takeaways (feed the recommendations)

- **Clearest consolidation targets:** transactional-admin (hub already owns it), scholarships (central catalogue exists), the duplicated "Employability in X" / "Wellbeing + Ambassadors" landings, and contacts-support restatements.
- **Genuinely faculty-owned (do not centralise):** placements/WIL, course plans, research candidature, clubs/events, discipline-specific skills.
- **Real hub gaps:** placements/WIL discovery, inbound international support, the apply-to-graduate spine, a faculty-course-planning gateway.
- **The recurring fix is the same as the estate-wide finding:** connect the seams + trim a thin duplicative layer + fix data-quality artifacts — not relocate the large unique faculty estate.

Topic Deep-Dive: Subjects & Timetabling

Cross-faculty analysis from the full crawl. June 2026.

319 subjects-timetable-tagged pages make this the single largest content topic in the audit. But the volume is wildly skewed: one school (ABP/MSD) holds **64%** of it, almost entirely as design-studio subject pages and studio archives going back to 2008. Strip those out and the topic is small and split — a thin layer of genuinely transactional hub content (MyTimetable, census dates, overloading) mis-attributed to faculties, plus legitimately discipline-specific subject catalogues (clinics, studios, internships, quota subjects). The duplication problem here is *archival bloat*, not cross-faculty redundancy.

Distribution — who holds it

Unit	Pages	What dominates
Architecture, Building & Planning (MSD)	204	Design studios + travelling-studio archives (2008–2026)
Law	30	Daily-rebuilt subject listings, MLS clinic subjects, subject delivery
Education	25	Placement-bound subjects, extensions/assessment, timetabling
Arts	21	Experiential-learning/internship subjects + re-hosted hub pages
Science	15	First-year subject sets, internship & research-project subjects, quota
MDHS	7	Placement subjects (during/conclusion of placement)
Engineering & IT (FEIT)	6	Internship subjects, MyTimetable/class-registration re-hosts
Fine Arts & Music	6	Timetable & room bookings, performance exam timetables
Business & Economics (FBE)	2	Intensives, Compulsory Quantitative Requirement
Biomedical Sciences (school · MDHS)	2	Quota subjects, first-year subject planning
Melbourne Business School (school · FBE)	1	Subject selection & advanced standing
Total	319	

ABP/MSD alone is bigger than every other unit combined. The count is inflated by MSD treating each studio offering (and every past-year archive — "Semester 2 2017 Studio 24", "2014 Studio Archive") as a standalone subject page; this is one school's content-management habit, not a true measure of where subject information lives.

Types of Subjects & Timetabling content

- Design-studio subject pages & studio archives** — the dominant category by raw count, and effectively unique to one school. *MSD* runs ~150+ pages under `subject-information/msd-studios` and `travelling-studios` — current offerings ("Open Studio: Worlding", "Threshold", "Wasteocene") plus a deep year-by-year archive ("Semester 1 2017 Thesis 5", "2009 Past Studios"). Discipline-specific and pedagogically real, but the historical archive drives most of the volume.
- The hub transactional spine (re-surfaced through faculties)** — the genuinely cross-cutting, transactional pages every student needs, owned by the hub but crawled under faculty tags because faculties link to them. Hub-domain pages caught here: **"Class timetable"** ("MyTimetable is the system you use to create and view your class schedule"), **"Check your subject census dates"** ("Every subject offered by the University has a census date"), **"Overloading"** ("enrol in more subjects than the standard amount... you will need to apply to overload"), **"Cross-institutional study"**. *Arts* surfaces all four; *FEIT* re-hosts MyTimetable as "Graduate Coursework Students (Domestic/International)".
- Subject catalogues / "what subjects can I take" listings** — discipline-scoped lists of available subjects. *Law* "JD subjects" (2,103w) and "MLM subjects" (1,901w) are daily-rebuilt listings ("This page is updated daily... considered indicative at the time of last update") — Handbook-derived data restated locally. *Science* "First year subject sets" and the per-discipline "starting in the Bachelor of Science" guides.

4. **Quota & restricted-enrolment subjects** — subjects with capped places and selection rules. *Science* "Quota subjects" (1,774w); *MSD* "Quota Subjects"; *Biomedical* "Quota Subjects" (1,452w). Three faculties independently maintain near-identical-in-purpose quota pages.
5. **Clinic, internship & experiential-learning subjects** — credit-bearing placement/practice subjects, deeply discipline-specific. *Law* MLS clinics ("Legal Internship", "Stateless Legal Clinic", "Tax Clinic", "Public Interest Law Clinic"); *Arts* "Experiential Learning", "Journalism Internship", "EMA Internship Subject", "Industry Project (ARTS30001)"; *Science* "Internships in the Faculty of Science", "Undergraduate research projects"; *FEIT* "Internship subjects".
6. **Subject delivery, timetabling & room bookings** — how/when/where subjects run. *FFAM* "Timetable & Room Bookings" (1,598w), "Practical Music and Performance Timetable", "Conservatorium performance examinations"; *Education* "Student Timetabling"; *Law* "Subject delivery", "Acceleration Guidelines"; *MSD* "SM2 2017 Studio Key Dates".
7. **Assessment, extensions & special consideration (subject-level)** — rules attached to taking subjects. *Education* runs a cluster — "FoE Extensions", "FoE Assessment Penalties", "Attendance Hurdles", "Reassessment", "Special Consideration", "Unsatisfactory performance" — much of which restates central assessment policy in a faculty voice.
8. **Subject enrolment mechanics & requirements** — enrolling in / selecting subjects. *Education* "Course Enrolment", "Subject Enrolment", "Permission to Teach"; *FBE* "Compulsory Quantitative Requirement", "Summer & Winter Intensives"; *MBS* "Subject Selection and Advanced Standing"; *Biomedical* "Plan your First Year Subjects".

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Design-studio offerings & catalogues (MSD)	Re-hosted MyTimetable / class timetable (FEIT, Arts)
Clinic & internship subjects (Law, Arts, Science, FEIT)	Census-date / overloading restatements
Quota-subject rules (per discipline)	Cross-institutional study (Law restates the hub page verbatim)
Performance/room-booking timetables (FFAM)	Subject-level assessment/extension/special-consideration policy (Education)
Daily subject listings tied to a degree (Law JD/MLM)	Generic "how to enrol in subjects" advice
Subject delivery & acceleration rules (Law, Education)	Studio <i>archives</i> (internal record-keeping, not current-student need)

The balance is unusual for this estate: most of the *raw volume* is legitimately faculty-owned (studios, clinics, catalogues), but it is heavily padded by MSD's historical archive, while the small set of pages students most need — the timetabling/census/overloading spine — is hub-owned and merely echoed by faculties. The redundancy is vertical (faculty restates hub) and archival (MSD keeps everything), not horizontal duplication across faculties.

Recommendation

- **Hub owns the transactional spine, unambiguously:** MyTimetable/class timetable, census dates, overloading, and cross-institutional study are single-source-of-truth hub pages. Faculties should *link*, never restate — retire Law's verbatim cross-institutional copy and FEIT's MyTimetable re-hosts.
- **Faculties keep the discipline-specific catalogue:** studios, clinics, internship/experiential subjects, performance timetables, and quota rules are genuinely theirs and cannot be centralised.
- **De-archive MSD:** move the studio archive (2008–2018 "Past Studios" / "Studio Archive" pages — well over half of ABP's 204) out of the current-students estate into a separate showcase/archive. This single move shrinks the topic's footprint by roughly a third and stops the audit being dominated by one school's record-keeping.
- **Add one hub gateway + standard:** a hub "Subjects & timetabling" page that links every faculty's subject catalogue and the MyTimetable tool, plus a standard that subject-level assessment/extension/special-consideration content (Education's cluster) defers to the central policy page rather than re-authoring it.
- **Highest-value fix: separate the live timetabling spine from archival subject bloat.** Students need MyTimetable, census dates and overloading to be one obvious hub destination; the 130+ MSD archive pages should not sit in the same content class as the page that tells someone when their fees lock in.

Topic Deep-Dive: Orientation

Cross-faculty analysis from the full crawl. June 2026.

289 orientation-tagged pages sit across the faculty estate — a deceptively large count that ranks orientation among the bigger topics, but the number is almost entirely a tagging artifact. **FEIT alone holds 204 of the 289 (71%)** because it nests nearly its whole current-students estate (scholarships, clubs, internships, study-overseas) under `/orientation/` URL paths — only 45 of those 204 URLs actually contain `/orientation/` as a content segment, and most of the rest are unrelated. The *genuine* orientation footprint is small, thin, and **legitimately faculty-owned**: per-degree "welcome / orientation week" landing pages and "accept your offer and get started" checklists. The duplication problem here is not cross-faculty overlap — it is one faculty's information architecture flooding the topic.

Distribution — who holds it

Unit	Pages	What dominates
Engineering & IT (FEIT)	204	Whole estate nested under <code>/orientation/</code> paths — scholarships, clubs, internships, study-overseas
Biomedical Sciences (school · MDHS)	24	"Plan your Bachelor of Biomedicine" + per-program orientation landings
Arts	20	Graduate-research commencement/induction + BA orientation event
Medicine, Dentistry & Health Sciences	14	Placement "before placement / day one" induction (not real orientation)
Law	12	JD/MLM orientation + "accept your offer and get started" + GRD profiles
Architecture, Building & Planning (MSD)	6	Peer mentoring + studio/course-plan pages (mis-tagged)
Science	3	Per-degree orientation (BSc, BAg, graduate getting-started)
Fine Arts & Music	3	One orientation landing + student-guide link-farm
Business & Economics (FBE)	2	One BCom orientation page
Melbourne Business School (school · FBE)	1	One orientation landing
Total	289	

FEIT is not "the orientation faculty" — it is a measurement distortion. Its `/student-experience/orientation/` tree is a deep navigational spine that parents content far beyond orientation (internships at 4,800+ words, scholarship rounds, Dean's Honours lists), so the crawler tagged the whole subtree. Strip FEIT's noise and the real estate is ~85 pages, of which only a handful per faculty are true orientation pages.

Types of Orientation content

- Per-degree orientation / welcome landings** — the genuine core: a dated welcome event for a named cohort. *Law* "Orientation" ("JD Orientation 4–5 February 2026, Melbourne Law School"); *Science* "Bachelor of Science Orientation", "Bachelor of Agriculture Orientation"; *Arts* "Bachelor of Arts Orientation" ("Welcome to the BA! ... Monday 20 July 2026, Forum Theatre"); *Biomedical* "Biomedicine Orientation" ("2026 Orientation Events ... 23–27 February"); *FBE* / *MBS* / *FFAM* each a single "Orientation" page.
- "Accept your offer and get started" / new-student checklists** — the pre-arrival transactional step, faculty-flavoured. *Law* "Accept Your Offer & Get Started | JD" (1,823w) and the Masters equivalent; *FEIT* "New Student Checklist (International Students)", "New Student Checklist (Domestic Students)", "Intro to Uni" (accepting offers).
- Graduate-research commencement & induction** — a distinct orientation track for HDR candidates. *Arts* "Graduate Research Orientation", "Commence your candidature", "Commencement form checklist", "Course enrolment information"; *FEIT* "Arrival and commencement checklist" (research).

4. **Orientation-program structure (before / during / after)** — multi-page programs, almost exclusively FEIT. *FEIT* "Engineering & IT Orientation Program", "Before Orientation", "After Orientation", "Graduate Orientation", "Orientation feedback survey", plus "Welcome to Melbourne: International Student Webinars" and "Melbourne Talks".
5. **Pre-arrival IT, software & systems setup** — onboarding into University platforms, all under FEIT's orientation tree. *FEIT* "Student IT", "Chat with Student IT", "General Software for UoM Students", "Calculator Policy", "International Student Resources", "Explore University Platforms and Systems".
6. **Placement induction mis-tagged as orientation** — MDHS's "before placement / day one of placement" pages are clinical-placement onboarding, not course orientation. *MDHS* "Before placement" (×8 across audiology, nursing, social work, psychology, dental), "Day one of placement", "Insurance".
7. **Peer mentoring & first-cohort community** — the social side of starting out. *FEIT* "Peer Connect Program", "Student Ambassador Leadership Program"; *MSD* "MSD Peer Mentoring Program"; *Biomedical* "Student Societies".
8. **FEIT estate swept in by URL path (noise)** — not orientation at all, but tagged because of `/orientation/` parentage: scholarship rounds and terms, Dean's Honours lists, clubs/societies, self-sourced & international internships, study-overseas research programs, skills series. This is the bulk of the 204 and the single biggest data-quality issue in the topic.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Per-degree orientation event landings (dates, venues, cohort) — Law, Science, Arts, Biomedical, FBE	Generic "what is Orientation week" / University-wide welcome framing
Faculty "accept your offer and get started" checklists	Pre-arrival IT/software/systems setup (FEIT) — University-wide, owned by the hub
Graduate-research commencement & induction (Arts, FEIT)	"Welcome to Melbourne" international webinars / Melbourne Talks
Discipline peer-mentoring & society intros	"New student checklist" generic steps the hub already owns
Placement induction (MDHS) — belongs to placements, not orientation	

The balance is the inverse of most topics: the *genuinely* orientation-specific content (the dated welcome event per degree) is small and rightly faculty-owned, while a large share of what is *tagged* orientation — IT setup, welcome webinars, generic checklists — is University-wide and should sit on the hub. The MDHS placement pages and FEIT's swept-in estate are simply mis-tagged.

Recommendation

- **Hub owns the welcome spine:** a single canonical "Orientation" hub page — University-wide Orientation week dates, the pre-arrival checklist, IT/software/systems setup, and "Welcome to Melbourne" international onboarding — so faculties stop each restating it (FEIT's whole `before-orientation` IT tree is hub material).
- **Faculties keep the dated event:** each faculty owns one "[Degree] Orientation" page with its cohort's date/venue/schedule and a peer-mentoring link — this is the only part that cannot be centralised, and it is exactly what students need from a faculty.
- **Add one hub gateway:** `students.unimelb.edu.au/new-students/orientation` linking to every faculty's orientation-event page, so a commencing student finds their faculty's welcome from the centre (currently each faculty publishes in isolation).
- **Fix the tagging — the highest-value action:** FEIT's `/student-experience/orientation/` URL tree should not parent scholarships, clubs, and internships; re-home them so the orientation topic stops absorbing ~160 unrelated pages, and re-tag MDHS "before placement" pages under placements, not orientation.
- **Standardise the entry pattern:** retire faculty "accept your offer and get started" checklist duplicates in favour of linking the hub checklist, keeping only genuinely faculty-specific commencement steps (e.g. Law JD enrolment, Arts HDR commencement forms).

Topic Deep-Dive: Transactional Admin

Cross-faculty analysis from the full crawl — enrolment, exams & results, special consideration, fees, library. June 2026.

227 pages across the faculty estate carry one of the five transactional tags — enrolment (84), exams & results (78), fees & finance (33), special consideration (25), library (7). This is the cluster the audit thesis bites hardest on. Unlike course-planning (where the volume is genuinely degree-specific) or subjects (where faculties own the content), the transactional spine is **hub-definitive**: the rules for how you enrol, what a grade means, how special consideration is adjudicated, when fees are due, and how the library works are set centrally on `students.unimelb.edu.au` and `policy.unimelb.edu.au`. The faculty pages here are overwhelmingly **restatements, local-process wrappers, or redirects** — and the crawl proves it: of all 227 pages, only **6 sit on the hub domain**, and 4 of those 6 surfaced *because Arts pages deep-link straight into the hub's canonical `course-admin/*` pages* (census dates, overloading, cross-institutional study, class timetable) rather than reproduce them. That is the consolidation argument in a single data point — when a faculty does it right, the crawler finds a hub URL, not a faculty one. This is the **single clearest consolidation target in the estate**.

Distribution — who holds it

Faculty / unit	Enrol	Exams	Spec con	Fees	Library	Total	What dominates
Law	25	24	3	6	2	60	JD/MLM enrolment + grading restated per cohort; GRD student-profile false positives
Education	15	23	13	4	0	55	Placement/ITE assessment & extension wrappers; one MT FAQ (5,447w) absorbs everything
Architecture, Building & Planning (MSD)	16	0	6	6	2	30	Enrolment forms + extension form; studio-archive false positives on fees/library
Arts	10	6	0	4	0	23	Census/overloading/cross-institutional — but mostly links to the hub's own pages
Fine Arts & Music	11	8	2	1	0	22	Conservatorium enrolment/exam forms (genuinely local); thin link-farms
Medicine, Dentistry & Health Sciences	3	11	0	3	0	17	Placement assessment/conclusion pages tagged as exams; Dental forms
Business & Economics (FBE)	1	3	0	9	0	13	Assessment + Exam Viewing FAQ; PhD stipend/fee-remission pages
Engineering & IT (FEIT)	3	3	1	0	0	7	Orientation enrolment steps; one good extensions/spec-con page (1,347w)
Total	84	78	25	33	7	227	

Two faculties — **Law and Education** — hold **115 of 227 pages (51%)**. But this is not ownership in the course-planning sense; it is *volume of restatement*. Law's 60 pages are inflated by ~15 graduate-researcher profile pages (e.g. "Daria Vasilevskaia", "Charlie Hock") that the topic classifier swept in on stray keyword matches; Education's 55 are dominated by a single 5,447-word Master of Teaching FAQ that touches enrolment, assessment, extensions and special consideration all at once. Strip the false positives and what remains is a thin local layer over a hub-owned spine.

Domain signal (the headline): 219 of 227 pages live on faculty/school domains, 6 on `students.unimelb.edu.au`, 2 are course-finder redirects to `study.unimelb.edu.au`. The hub *is* the source of truth; the faculty estate is the echo.

The five sub-topics

Enrolment (84) — the largest, and the most restated

The hub owns the transactional act of enrolment end-to-end: my.unimelb / the Student Portal, the [census-dates](#), [overloading](#), [cross-institutional study](#) and leave-of-absence machinery. What faculties legitimately host is a thin band of **local enrolment process**: form repositories (MSD "List of Forms", FFAM "Conservatorium Subject/Ensemble Enrolment Forms"), accept-your-offer/orientation steps (Law, FEIT), and cohort-specific rules (Law "JD subjects" / "MLM subjects", prerequisite waivers). Everything else is duplication — 22 of these pages are *mixed* (transactional content bolted onto a page about something else), and the four Arts pages that scored highest are literally the hub's own `course-admin/*` URLs picked up because Arts links to them. **Verdict: ~70% restatement/redirect, ~30% legitimate local process (forms, offer-acceptance, cohort rules).**

Exams & Results (78) — grading is a central policy; faculties add penalty/hurdle local rules

The definition of grades, results release, exam timetabling and the Assessment and Results Policy are hub/policy-owned. The genuinely faculty-specific slice is **local assessment rules**: hurdle requirements, attendance hurdles, penalty schedules, reassessment, exam-viewing (FBE "Exam Viewing FAQ", Education "FoE Assessment Penalties" / "Attendance Hurdles" / "Reassessment", Law "Student Achievement and Grading", FFAM "Conservatorium performance examinations"). But this topic is the noisiest: **Law contributes 24 pages of which the majority are graduate-researcher *profile* pages** misclassified by keyword, and MDHS's 11 are placement assessment/conclusion pages. Strip those and exams-results is a small set of real local-rule pages over a hub-defined grading spine. **Verdict: heavy false-positive inflation; the real content is local assessment rules (legit) over hub-owned grading definitions (duplicated).**

Special Consideration (25) — the textbook hub-owned policy

Special consideration is a **single university process** with one application path, governed centrally. There is nothing degree-specific about its rules. Yet 13 of 25 tagged pages are Education's (the MT FAQ again, plus "FoE Extensions", "Special Consideration", "Attendance and absences"), and the cleanest comparison in the whole topic is between FEIT's "Extensions and Special consideration" (1,347w — a full local restatement) and Law's "Special consideration" (598w — a near-verbatim restatement of the central policy with a local contact). These pages exist almost entirely to **re-explain a hub policy in faculty voice**. The only legitimate faculty content is the *local extension* process where faculties genuinely hold discretion (short extensions, placement attendance), which is distinct from university special consideration. **Verdict: the purest duplication in the cluster — one central process, restated 25 times.**

Fees & Finance (33) — almost none of this is real faculty fees content

Fees, due dates, payment, financial hardship, fee remission and Commonwealth assistance are entirely hub/Stop-1-owned. The faculty estate has **essentially no legitimate fees content** — and the crawl shows it: of 33 tagged pages, the top hits are MSD travelling-studio and studio-archive pages (false positives on "fee"/"cost" mentions), Law study-overseas and locker-hire pages, and FBE *PhD stipend and fee-remission* scholarship pages (research-funding, not coursework fees). The only arguably-legitimate items are scholarship/grant pages and the Arts travel grant — and those belong under scholarships, not fees. **Verdict: ~90% false-positive or scholarship-adjacent; near-zero genuine faculty fees ownership. Pure consolidation/hub-redirect territory.**

Library (7) — not a faculty topic at all

The Library is a university-wide service (library.unimelb.edu.au) with its own site outside this crawl's faculty scope. The 7 pages tagged here are **noise**: two Arts 404 error pages, an MSD studio-archive pair, a Law "About the Centre and facilities" page (the Legal Academic Skills centre, not the library) and a 19-word link-farm. **Verdict: zero legitimate faculty library content; the topic confirms faculties don't — and shouldn't — host library material.**

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Hub-overlapping (consolidation candidates)
Local enrolment <i>forms</i> repositories (MSD, FFAM Conservatorium forms)	Generic "how to enrol / re-enrol" restatements
Accept-your-offer / orientation enrolment steps (Law, FEIT)	Special consideration policy restated per faculty (~ the whole 25)
Cohort-specific subject rules & prerequisite waivers (Law JD/MLM)	Census dates / overloading / cross-institutional (hub <code>course-admin/*</code> pages already canonical)

Faculty-owned (cannot be centralised)	Hub-overlapping (consolidation candidates)
Local assessment rules: hurdles, penalties, reassessment, exam-viewing (FBE, Education, FFAM)	Grade-definition / results-release restatements
Faculty-discretion <i>extensions</i> (distinct from university spec-con)	All fees content except scholarships ($\approx$ the whole 33)
Research-funding stipends & fee-remission (FBE — belongs under scholarships)	All library content ($\approx$ the whole 7)

The balance here is the inverse of course-planning. There, most content was legitimately faculty-owned. **Here, most of it is hub-overlapping.** The legitimately-local residue is narrow: form repositories, offer-acceptance steps, and the genuine local-discretion bands (faculty extensions, assessment hurdles/penalties). Everything else restates a central rule or is a classifier false positive.

Recommendation (transactional admin under hub-and-spoke)

- **Declare the hub the single source of truth** for the transactional spine: enrolment mechanics, grading & results, special consideration, fees, and library. These pages already exist and are canonical on `students.unimelb.edu.au` and `policy.unimelb.edu.au` — the faculty restatements add maintenance cost and version-drift risk, not value.
- **Faculties link, never restate.** Replace every faculty page that re-explains a central process with a one-line signpost to the hub canonical page. The Arts pattern (deep-linking to `course-admin/census-dates`, `.../overloading`, `.../cross-institutional-study`) is the model the other faculties should copy — and the proof it works is that those are the only "faculty" pages the crawler resolved to a hub URL.
- **Remove the duplicative pages outright** where there is no local discretion: the ~25 special-consideration restatements (keep only genuine faculty *extension* process), the ~33 fees pages (re-file the handful of scholarship/stipend pages under Scholarships; redirect the rest), and the library tag entirely.
- **Keep the narrow legitimate residue and label it clearly:** local enrolment *forms*, offer-acceptance/orientation steps, and local assessment rules (hurdles, penalties, reassessment, exam-viewing). These are the only pages with content the hub cannot hold.
- **Fix the "where to go" signpost.** Each faculty should expose one consistent "Enrolment, results & admin" landing page whose entire job is to (a) link to the hub's transactional pages and (b) surface the faculty's genuine local exceptions (forms, hurdles, extensions). One label, one location, across all eight faculties — so a student never has to guess whether enrolment lives centrally or locally. It lives centrally; the faculty page just points there.
- **Clean the classifier signal.** ~15 Law graduate-researcher profile pages and the MSD studio-archive cluster are false positives inflating these topics; excluding them sharpens the (already strong) duplication picture and should be reflected in the final page inventory.

Topic Deep-Dive: Research Candidature

Cross-faculty analysis from the full crawl. June 2026.

241 research-candidature-tagged pages make this the **third-largest content topic** in the estate — behind only subjects/timetabling (319) and orientation (289), and just ahead of course-planning (207). It is almost entirely **faculty-owned** (204 of 241 pages classify as `unique`) and almost entirely **legitimate**: graduate research is discipline-bound, supervised, and milestone-gated, so faculties genuinely need their own content. The catch is *volume* — a large slice of the count is not substantive guidance at all but **per-student profile pages** (Law alone publishes ~70 graduate-researcher bios) and a **candidature-management spine** (commencement → milestone reviews → variations → thesis submission) that every faculty restates around a single central system.

Distribution — who holds it

Unit	Pages	What dominates
Law	86	~70 individual graduate-researcher profile pages + PhD/MPhil milestones
Architecture, Building & Planning (MSD)	43	Thesis/research studios + studio archive (Master of Architecture/Urban Design/Planning)
Engineering & IT (FEIT)	31	Candidature lifecycle (getting started → progress review → thesis) + research scholarships + overseas research
Arts	28	The canonical "manage your research program" spine (milestones, variations, conversion, thesis)
Melbourne Business School (school · FBE)	13	"Research Pathway" variants of master's course plans
Fine Arts & Music	12	Research-degree info, grants/writing-up awards, progress reviews, research ethics
Science	10	Research-project subjects + graduate-research course guide, scholarships, contacts
Business & Economics (FBE)	8	PhD candidature, stipends & fee remissions, prizes
Biomedical Sciences (school · MDHS)	4	Research-project subject + Deans' Honours
Dental (school · MDHS)	3	Student-resources research page + internal grants
Medicine, Dentistry & Health Sciences	2	Clinical-neuropsychology + research-pathways advising
Education	1	ITE assessment
Total	241	

Law alone holds **36%** of the topic — but that is an artefact of one design choice (a public profile page per graduate researcher), not 86 pages of distinct candidature guidance. Strip the profiles and Law's substantive footprint is closer to a dozen pages, putting the *real* content leaders at Arts, FEIT and MSD.

Types of Research Candidature content

- The candidature-management lifecycle spine** — commencement → progress/milestone reviews → candidature variations → conversion/transfer → thesis submission. This is the canonical research-degree journey and recurs almost identically across faculties. *Arts* is the cleanest expression ("Milestone reviews", "Candidature variations", "Course conversion" [MA↔PhD], "Thesis submission", "Commence your candidature"); *FEIT* mirrors it ("Arrival and commencement checklist", "Reviewing your progress", "Course requirements", "Submitting your thesis and beyond"); *FBE* condenses it into a single "Your Candidature".
- Discipline-specific degree milestones / requirements** — the genuinely faculty-owned layer that sits *on top of* the central system. *Law* "PhD (Law) Milestones" (2,912w) and "MPhil (Law) Milestones" (2,857w) are explicit about this: they "outline

Melbourne Law School's discipline-specific requirements to **complement online progress review forms generated by the Candidature Management System.** *FFAM* "Progress reviews for research students"; *Science* "Course guide: Graduate research".

3. **Individual graduate-researcher profile pages** — a bio per candidate (thesis topic, supervisors, bio). Overwhelmingly *Law* (~70 pages: Bongkot Napaumporn, Liam Elphick, Kevin Yam, ...), with *FEIT* "Meet our graduate researchers" (3,201w) doing the same job as a single roster. The single biggest driver of this topic's page count, and the least like "guidance."
4. **Research scholarships, stipends, grants & prizes** — funding content specific to research candidature. *FEIT* (a whole cluster: "Scholarships for Graduate Researchers", "Summer/Winter Round 2026", "Conference Travel Grant", "PhD Write Up Award"); *FBE* ("Stipends and fee remissions", "FBE Doctoral Program Stipend", "Research training and development scholarships"); *FFAM* ("Grants and internal funding", "MCM Director's Writing Up Award"); *Law* ("Research Support Funds", "McNiff Scholarship"); *Dental* ("MDS Internal Grants").
5. **Supervision & the supervisor-candidate relationship** — *Law* "Supervision"; threaded through the *FFAM*/Arts manage-your-program sections. A distinct, advice-style content type separate from the transactional milestones.
6. **Research-project / thesis subjects** (coursework-embedded research) — research components inside coursework degrees rather than standalone HDR. *Science* "Research Project Subjects | Vet & Ag Sciences" (3,185w), "Master of Science research projects", "Undergraduate research projects", "Differences in Major and Minor Research Projects"; *Biomedical* "BIOM30003 Biomedical Science Research Project"; *MBS* the "Research Pathway" variant of every master's plan (13 pages). This type overlaps the course-planning topic — the same pages are dual-tagged.
7. **Research studios & creative-practice research output** — discipline-specific to the practice-based disciplines. *MSD* dominates: thesis studios and a deep studio archive (Master of Architecture "Open Studio: Worlding", "Thesis Studio", "Semester 2 2017 Thesis 7", and many 2017–18 archive pages); *FFAM* "PhD Music Performance", "Master of Music (Research)", "Portfolio Recordings Support Scheme".
8. **Research enrichment, community & life** — cohort-building and skills beyond the thesis. *Law* "Enrichment" (1,593w), "MLS Graduate Researchers Association (GRA)", "Student Life and Societies"; *FEIT* "Life at FEIT", "Thesis writing events", "Internships", "Student clubs"; *Arts* "Enriching your graduate research", "ArtsModules".
9. **Research ethics, integrity & induction** — compliance and onboarding for researchers. *FFAM* "Research Ethics & Integrity"; *Science* "Online guides and Faculty inductions", "Important contacts for graduate researchers", "Events for graduate researchers"; *FEIT* "Building access and ID cards — Graduate Researchers", "Get in touch".

A cross-cutting pattern: the candidature lifecycle (Type 1) is the same journey everywhere because it is **driven by one central system** (the Candidature Management System and its online progress-review forms). What faculties legitimately add is the *discipline-specific* milestone detail (Type 2), the people (Type 3), the money (Type 4), and the practice-based output (Type 7).

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Discipline-specific PhD/MPhil milestones (Law, FFAM)	Generic candidature lifecycle prose: commencement, progress reviews, variations, conversion, thesis submission (Arts, FEIT, FBE all restate it)
Individual graduate-researcher profiles (Law, FEIT)	Generic "how progress review / milestone / thesis submission works" — owned by the Candidature Management System + Grad Research Hub
Research studios & creative-practice output (MSD, FFAM)	Faculty restatements of University-wide HDR scholarship <i>policy</i> (vs faculty-specific schemes, which stay)
Faculty-specific scholarships, grants & writing-up awards (FEIT, FBE, FFAM, Dental)	"Getting started / arrival checklist" boilerplate duplicated per faculty
Research-project <i>subjects</i> embedded in coursework (Science, Biomedical, MBS)	Generic supervision and research-integrity advice (University-wide policy)
Overseas/international research programs (FEIT)	

The balance tips **faculty-owned** — but for two different reasons than course-planning. About half the count is *legitimately* discipline-bound (milestones, studios, faculty-specific funding, research subjects). The other half is **not duplicated guidance so much as inflated structure**: ~70+ profile pages and a lifecycle spine that every faculty re-narrates around a single central system the hub already owns.

Recommendation

- **Hub owns the candidature spine:** a single canonical "Managing your candidature" set — commencement, milestone/progress reviews, candidature variations, conversion/transfer, thesis submission — sourced from the Candidature Management System and the Graduate Research Hub. Faculties link to it rather than re-narrating it (Arts, FEIT and FBE currently each maintain their own copy).
- **Faculties keep the discipline layer:** PhD/MPhil milestone *specifics*, research studios and creative-practice output, faculty-specific scholarships/grants/writing-up awards, and research-project subjects. These are exactly the content the hub cannot write.
- **Add one hub gateway:** `students.unimelb.edu.au/.../graduate-research/faculty-requirements` — a thin index linking each faculty's discipline-specific milestone and supervision pages, so a candidate can get from the central spine to their school's requirements in one hop (today this only works in reverse).
- **Treat graduate-researcher profiles as a directory, not pages:** ~70 individual Law bios (and FEIT's equivalent) belong in a filterable researcher directory / data-driven listing, not as 70 standalone tagged pages — this single change deflates the topic's count without losing any content.
- **Highest-value fix:** consolidate the duplicated candidature lifecycle into one hub-owned spine and convert per-student bios to a directory. Together these remove the bulk of the non-discipline-specific page count while leaving every faculty's genuinely owned milestone, studio, and funding content untouched.

Topic Deep-Dive: IT & Systems

Cross-faculty analysis from the full crawl. June 2026.

235 IT-systems-tagged pages sit across the faculty estate, but the count is badly misleading: **183 of them (78%) are FEIT**, and most of those are not about IT at all — they are internships, scholarships, clubs, orientation and study-overseas pages swept in because they live under an "Engineering and Information Technology" faculty whose every URL says `eng.unimelb.edu.au`. Strip the noise and the *genuine* IT-and-systems signal is small, faculty-owned where it concerns physical facilities (computing labs, equipment loans, A/V suites), and almost entirely hub-overlapping where it concerns the transactional spine (Student IT helpdesk, software, the LMS, MyTimetable, the student portal/SSO).

Distribution — who holds it

Unit	Pages	What dominates
Engineering & IT (FEIT)	183	Mostly mis-tagged (internships, scholarships, clubs, orientation); thin genuine core (Student IT, software, ID cards)
Arts	11	A/V loan equipment + video edit suites + hub course-admin pages cross-tagged in
Architecture, Building & Planning (MSD)	10	One deep "IT Support" page + studio archives + club/forms pages
Business & Economics (FBE)	8	Computing spaces / facilities rules / virtual lab — each duplicated (BCom + faculty)
Education	5	"Student Services and IT" (password/helpdesk) + placement-bound pages
Biomedical Sciences (school · MDHS)	5	Course redirects + the student-portal SSO redirect
Law	4	Canvas/LMS community + landing pages
Medicine, Dentistry & Health Sciences	4	Placement IP / clinical pages (tenuously tagged)
Fine Arts & Music	3	Tech Support & Facilities (3,501w) + instrument loans
Melbourne Business School (school · FBE)	2	Open-access computing spaces + virtual lab
Total	235	

FEIT alone accounts for **78%** of the tag — the single most lopsided distribution in the audit — but that is a faculty-namespaces artefact, not a real concentration of IT content. The honest topic is roughly 30–40 genuinely IT-flavoured pages spread thinly across the other nine units.

Types of IT & Systems content

- 1. Student computing spaces, labs & facilities rules** — physical/virtual lab provision and the rules governing it. *FBE* "Student Computing Spaces", "FBE computing facilities rules", "FBE virtual lab" (each existing twice — once under `/bcom/` and once under `/services/`); *MBS* "Open Access Student Computing Spaces", "Virtual Lab". Genuinely faculty-owned because the rooms and machines are.
- 2. Faculty IT support / helpdesk pages** — discipline-specific support fronts. The richest is *ABP/MSD* "IT Support" (3,247w) — "Computer and software information for BDes and MSD students", including faculty-specific notes such as Adobe Creative Cloud licensing changes; *Education* "Student Services and IT" ("Forgot your password? ... Student IT and eLearning Support ... using university applications, accessing your email"). The MSD page is legitimately local; the Education page is mostly a restatement of the hub's Student IT service.
- 3. Software access & device requirements** — what to install, what hardware to bring. *FEIT* "General Software for UoM Students", "Technology requirements and available resources", "Calculator Policy". Software entitlements are a University-wide service;

the calculator policy is the only genuinely faculty-specific item.

4. **Student IT contact & live-chat channels** — how to reach support. *FEIT* "Student IT", "Student IT Contact", "Chat with Student IT". These point at the same central Student IT service the hub already owns; re-fronting it per faculty is pure overlap.
5. **The LMS / Canvas & learning platforms** — course-delivery systems. *Law* "Legal Academic Skills LMS Community" ("automatically enrolled ... it will appear on your Canvas dashboard ... Log in to the LMS"). The LMS itself is central; the *community content* inside it is faculty-owned.
6. **Equipment, instrument & A/V loans** — bookable kit tied to studio/performance disciplines. *FFAM* "Tech Support and Facilities" (3,501w — the largest IT-tagged page in the estate, covering equipment loans, technical staff, digital printing), "Instrument Loans"; *Arts* "Audio/Visual loan equipment", "Video edit suites" (×2), "Book a room and hire equipment". Strongly faculty-owned — the kit is physical and program-specific.
7. **Core student systems: portal, SSO, timetable, census** — the transactional spine, cross-tagged in. *Biomedical* "Student portal" (a 302 redirect to SSO/SAML sign-in); *Arts*-surfaced hub pages "Class timetable" ("MyTimetable is the system you use to create and view your class schedule"), "Check your subject census dates", "Cross-institutional study". These are unambiguously hub assets that happen to carry the IT tag.
8. **Building access & ID cards** — the physical-access system. *FEIT* "Building access and ID cards" (two variants, coursework vs graduate-researcher). Card/access systems are University-wide infrastructure with thin faculty-specific instructions.
9. **Tagging noise (not genuinely IT)** — the dominant "type" by raw count. The FEIT bucket is overwhelmingly internships ("Self-sourced internships" 4,864w, "University-sourced internships", the internship FAQ), scholarships and Dean's Honours pages, student clubs, orientation, and study-overseas/international-research programs. They are IT-tagged only because they sit on the `eng.unimelb.edu.au` (Engineering *and* IT) domain — a classifier false-positive, not real IT content.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Computing labs / facilities rules (FBE, MBS)	Faculty "Student IT" / helpdesk / live-chat re-fronts (FEIT, Education)
Faculty IT-support specifics — software licensing, studio kit (MSD, FFAM)	General software entitlements for all UoM students (FEIT)
Equipment / instrument / A/V loans (FFAM, Arts)	Student portal / SSO, MyTimetable, census dates (cross-tagged hub pages)
LMS <i>community content</i> — e.g. Legal Academic Skills (Law)	Building access & ID-card system instructions
Calculator policy, discipline device rules (FEIT)	Generic "accessing email / resetting password" restatements

The balance is unusual for this audit: the *legitimate* faculty-owned core is small but real (physical labs, loanable kit, a couple of genuinely local IT-support pages), while the bulk of the tag is either hub-overlapping restatements of the central Student IT spine **or** outright mis-classification. Very little net unique content sits here once the FEIT namespace artefact is removed.

Recommendation

- **Hub owns the IT spine outright:** Student IT helpdesk + live chat, software/device entitlements, password/account/email, the LMS (Canvas), MyTimetable, student portal/SSO, and building access/ID cards. These are single-source-of-truth services; faculties should link, never restate.
- **Faculties keep only what is physically theirs:** computing labs and their rules, studio/A-V/instrument loan systems, and genuinely local IT-support notes (e.g. MSD's Adobe licensing, FFAM tech support). These cannot be centralised.
- **Stop re-fronting Student IT:** retire the FEIT "Student IT / Student IT Contact / Chat with Student IT" trio and Education's helpdesk restatement in favour of one deep-link to the hub Student IT page.
- **De-duplicate within FBE:** the computing-spaces / rules / virtual-lab set exists twice (`/bcom/` and `/services/`); collapse to one canonical copy each.

- **Highest-value fix — fix the tag, not the content:** the FEIT `eng.unimelb.edu.au` namespace is poisoning this topic (183 of 235 pages, ~78%, mostly non-IT). Re-classify the internship/scholarship/club/orientation pages to their true topics so the IT-systems inventory reflects the ~30–40 genuinely IT pages — without that, every metric on this topic is distorted.

Topic Deep-Dive: Student Life

Cross-faculty analysis from the full crawl. June 2026.

214 student-life-tagged pages sit across the faculty estate — a mid-to-large topic, comparable in size to course-planning (207). It is almost entirely **faculty-owned**, and mostly *legitimately* so: clubs, mentoring, ambassador programs, faculty awards and discipline-specific enrichment are inherently local. But the raw count is inflated by two non-content patterns — MSD's **studio archive** and Science's **student-staff committee member roster** — which together account for roughly a third of the topic without adding student-facing "how to" content.

Distribution — who holds it

Unit	Pages	What dominates
Architecture, Building & Planning (MSD)	60	Studio archive + student-experience hub (clubs, mentoring, awards, exhibitions)
Law	46	JD enrichment: clinics + global degree-partnership pages
Science	38	Student-staff reference committee member bios + volunteering/wellbeing
Engineering & IT (FEIT)	25	Eng & IT Community, peer/ambassador programs, Community Awards winners
Medicine, Dentistry & Health Sciences	25	Student enrichment (mentoring, leadership, clubs) + placement student content
Arts	7	Student advisory council, student ambassadors
Fine Arts & Music	4	Ignite LAB, career mentoring, employability
Business & Economics (FBE)	3	BCom First Semester Guide
Education	3	Student advisory committee, ambassador program, ICAS
Biomedical Sciences (school · MDHS)	2	"Shape your experience" landing
Melbourne Business School (school · FBE)	1	Wellbeing ambassadors
Total	214	

ABP/MSD alone holds **28%** of the topic — but the bulk of that is the MSD studio archive (2014–2026 studio briefs) and is really subject/portfolio content shelved under "student experience", not transferable student-life advice.

Types of Student Life content

- 1. Clubs, societies & student associations** — the canonical "student life" content. *MSD* "Clubs and Societies" / "Information for clubs"; *Science* "Student Clubs and Societies"; *MDHS* "Student Clubs and Societies"; *Law* "Student Life and Societies" (separate JD, MLM and graduate-researcher variants). Inherently local — each faculty has its own clubs.
- 2. Peer mentoring & ambassador programs** — structured peer-to-peer schemes. *FEIT* "Peer Connect Program", "Student Ambassador Leadership Program"; *MSD* "Peer Mentoring Program", "Student Ambassador & Leadership Program", "Construction Ambassador Program"; *Science* "Science Ambassadors", discipline-specific "Data Science / Biotechnology Peer-to-Peer Mentoring"; *Arts*, *Education* and *FFAM* each run their own ambassador/mentoring page.
- 3. Student representation & governance** — committees and councils that give students a voice. *Science* "Student-Staff Reference Committee" (plus ~30 individual committee-member bio pages — Hannah Ramsey, Kylie Wang, Viraj Patel...); *Arts* "Arts Student Advisory Council"; *Education* "Education Student Advisory Committee"; *MDHS* "Student Advisory Council", "Student Leadership"; *MSD* "Student Representation on Faculty Committees", "Student Forum", "Student Feedback, Complaints and Grievances".
- 4. Faculty awards, recognition & celebrations** — *MSD* "Dean's Honours Awards" (2023, 2024); *FEIT* "Community Awards" (FAQs, nomination, and a winners page **per year, 2022–2025**); *MDHS* "Chancellor's Scholars" (with individual scholar bios — Garry Zhu, Emily Sun, Zahra Ataie).

5. **Discipline-specific enrichment & experiential programs** — the line where "student life" blurs into curriculum. *Law's MLS Clinics* (Tax, Public Interest, Climate Resilience, Indigenous Legal Advocacy, NDIS/Disability) and **global learning / degree partnerships** (Oxford, Cambridge, NYU, NUS, Peking...) — 30+ Law pages; *FFAM* "Ignite LAB"; *Arts* "The Social Impact Project"; *FEIT* cross-faculty "pathway" pages (Commerce, Design, Science, Biomedicine/Engineering).
6. **Wellbeing & belonging events** — *Science* "Student wellbeing", "SWOT Vac Wellbeing Brunch"; *FEIT* "Wellbeing Series"; *MDHS* "Chat Fest" (international graduate-entry students). (The transactional wellbeing/health spine lives under its own topic; these are local community events.)
7. **Indigenous student experience** — *FEIT* "Indigenous Student Experience"; *MDHS* "MDHS Indigenous Student Success". Faculty-tailored, but a clear hub-coordination candidate.
8. **Orientation & "starting out" / first-semester guides** — *FBE* "BCom First Semester Guide" (a week-by-week SSO-gated walkthrough); *Law* "Orientation", "Student Cards and Law Students' Study Area"; *Education* "Introduction to Contemporary Australian Schooling (ICAS)".
9. **Studio / exhibition archive (MSD-specific artefact)** — the largest single block: *MSD* "MSD Studios" briefs (Threshold, Five Mile Creek, Go East Young Wo(Man)...) and the 2014–2018 "MSD Studio Archive", plus "MSDx" student-exhibition resources. This is portfolio/subject material parked under student-experience, and is the main reason ABP's count is so high.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Clubs, societies & student associations (all faculties)	Generic "what is student life / get involved" framing pages
Discipline enrichment — MLS Clinics, global partnerships, Ignite LAB	Indigenous student experience (hub should coordinate a standard)
Faculty awards & recognition (Dean's Honours, Community Awards)	Wellbeing-event pages that restate the central wellbeing spine
Student representation committees & councils	Orientation / "starting out" generic onboarding content
MSD studio & exhibition archive (discipline artefact)	Ambassador/mentoring pages reduced to thin "register here" stubs

The balance is strongly **faculty-owned** — clubs, mentoring, awards and enrichment are intrinsically local and the genuine hub overlap is thin. The real problem here is not duplication of the hub but **internal bloat**: roster bios (Science) and archival studio briefs (MSD) swell the count without being reusable student-life guidance.

Recommendation

- **Hub owns:** the cross-cutting "Getting involved at Melbourne" gateway — university-wide clubs/UMSU, volunteering, and the canonical wellbeing/belonging spine — as the single front door students reach for first.
- **Faculties keep:** their clubs, peer-mentoring and ambassador programs, faculty awards, student-representation committees, and discipline-specific enrichment (Law clinics, global partnerships, Ignite LAB) — none of this can or should be centralised.
- **Add one hub gateway page:** students.unimelb.edu.au/student-life/faculty-communities — a thin index linking each faculty's student-experience hub, so a student can find "what's on in my faculty" from the centre (today these are invisible from the hub).
- **Set a standard, don't centralise:** Indigenous student experience and wellbeing events should follow a hub-defined template/label so they're consistent and discoverable, while faculties retain the local content.
- **Highest-value fix:** stop tagging the MSD studio archive and the Science committee-member bio pages as "student life." Re-classify the studios as subject/portfolio content and collapse the committee roster behind its parent page — that alone removes ~60 low-value pages from this topic and makes the genuinely useful student-life content findable.

Topic Deep-Dive: Forms & Admin

Cross-faculty analysis from the full crawl. June 2026.

212 forms-admin-tagged pages sit across the faculty estate — a mid-sized topic, but the most *heterogeneous* one in the audit: it is less a single content type than the catch-all "administrative spine" of student life (accept-your-offer, enrol, apply for an extension, get a police check, hit a candidature milestone, fill in a form). The volume is **concentrated and lumpy** rather than evenly duplicated — MDHS's 36 near-identical pre-placement compliance pages and Law's 66 transactional/global-program pages alone are half the topic. Most of it is legitimately faculty-owned process, but a thick seam overlaps the hub's transactional core — and two pages in this very set are *already* hub-hosted (`students.unimelb.edu.au/course-admin/...`), proving the boundary is being crossed both ways.

Distribution — who holds it

Unit	Pages	What dominates
Law	66	Offer/enrolment + JD/MLM subject listings + global degree-partnership programs + GRD milestones
Medicine, Dentistry & Health Sciences	36	Pre-placement compliance checks (immunisation, police, WWCC, AHPRA)
Biomedical Sciences (school · MDHS)	34	Planning/honours/research-project admin (shared with course-planning)
Architecture, Building & Planning (MSD)	26	"List of Forms" hub + extension form + studio-archive admin
Fine Arts & Music	22	Conservatorium forms hub (enrolment, ensemble, special-permission, approval)
Arts	16	Graduate-research commencement/candidature admin + internships + hub re-hosts
Education	4	Placement forms/policies + assessment penalties + WWCC
Dental (school · MDHS)	3	Student-resources + a single "Forms" page + internal grants
Science	2	Spillover (IT subject set, a redirect)
Engineering & IT (FEIT)	1	Calculator Policy
Business & Economics (FBE)	1	Honours entry/application
Melbourne Business School (school · FBE)	1	Key Dates and Contacts
Total	212	

Law and the two MDHS units (faculty + Biomedical school) hold **64%** of the topic. The long tail is striking: six units hold ten pages or fewer, yet most of those *are* the faculty's real forms hub — so the topic is simultaneously over-concentrated at the top and under-served at the bottom.

Types of Forms & Admin content

- 1. Pre-placement compliance checks** — the single largest cluster, and almost entirely MDHS. Each check is its own page on an identical "What is it? / What do I need? / How long?" template: *MDHS* "Working with Children Check", "Australian Police Check", "Overseas Police Record", "NDIS Worker Screening Check", "Mask Fit Testing", "Hepatitis B / MMR / Pertussis / TB / Varicella / Influenza", "AHPRA Registration", "CPR and First Aid", "Summary of checks", "Sonia". *Education* re-states two of these ("Working with Children Check", "Placement forms"). This is genuinely registration- and placement-bound content — but the *check definitions themselves* (what a WWCC or police check is) are generic and re-explained per faculty.
- 2. Faculty "list of forms" hubs** — a thin index page pointing to the actual web-forms (most of which are SSO-gated and crawl as `@w` redirects). *ABP/MSD* "List of Forms" + "Application for Extension" (+ the gated "Extension Application Form", "Travelling Studio application", "Peer Mentoring register"); *FFAM* "Conservatorium Subject Enrolment Forms", "Conservatorium Ensemble

Enrolment & Participation Forms", "Conservatorium Special Permission Forms", "Assessment and Program Approval forms", "Fine Arts and Music Enrolment Assistance"; *Dental* "Forms". Every faculty has reinvented this index with a different label and location.

- 3. Accept-your-offer / commencement / get-started** — the front door of administrative enrolment, restated per faculty even though the canonical "Get Started at Melbourne" lives on the hub (and the faculty pages explicitly say so). *Law* "Accept Your Offer & Get Started | JD", "...| Masters"; *Arts* "Commencement form checklist" (×2, duplicated across `/commencement/` and `/plan-your-program2/`); *Biomedical* "Orientation" variants.
- 4. Enrolment & re-enrolment mechanics** — faculty restatements of a hub-owned process. *Law* "Enrolment and Re-Enrolment | JD", "...| Masters", "Subject delivery", "Acceleration Guidelines"; *ABP* "Enrolment"; *FFAM* "Enrolment for research students". The Law pages openly defer to the University's re-enrolment process, then add a few discipline-specific lines.
- 5. Live subject / quota / waiver listings** — daily-updated enrolment data and the rules around it. *Law* "JD subjects" (2,103w, plus a `_recache` twin), "MLM subjects" (1,901w + twin), "Subject Prerequisite Waiver", "Legal Research" capstone application. These are real faculty data, but the duplicate `_recache` URLs inflate the count and signal a caching/crawl artefact, not extra content.
- 6. Assessment admin — extensions, special consideration, penalties** — the most obvious hub overlap. *Law* "Extensions", "Special consideration", "Registration for ongoing support"; *ABP* "Application for Extension"; *Education* "FoE Assessment Penalties"; *FFAM* "Assessment and Program Approval forms". Special consideration and extensions are a University-wide policy with a central application — every faculty version is a partial restatement.
- 7. Graduate-research candidature admin & milestones** — process bound to the research degree: commencement checklists, candidature variations, milestone reviews, supervision. *Law* "PhD (Law) Milestones" (2,912w), "MPhil (Law) Milestones", "Graduate Research Coordinators" (plus a large set of low-word GRD *student-profile* pages mis-swept into this topic); *Arts* "Candidature variations", "Commencement form checklist", "Manage your candidature". Discipline-specific milestone *requirements* are faculty-owned; the surrounding "how candidature works" framing is hub/Chancellery territory.
- 8. Conduct, policy & standalone-rule pages** — administrative rules that aren't forms but govern admin. *Law* "Professional Behaviour Guidelines" (3,169w — the single largest page), "Class Recording Policy"; *FEIT* "Calculator Policy". Where the rule is professional/disciplinary (Law conduct) it is faculty-owned; where it is generic (a calculator policy) it is a candidate for a central exam-rules page.
- 9. Internships, global programs & enrichment admin** — application-and-approval-heavy content tagged here for its transactional nature. *Law*'s large "degree-partnerships" block (Oxford, Cambridge, NYU, NUS, Peking, Leiden, etc. — ~16 pages), "Study Overseas program", "Non-partner programs", "MLS Clinics"; *Arts* "Job Ready Program", "Journalism Internship", "EMA Internship Subject", internship/mobility grants; *ABP* "ABPL90434 internship" (self-sourced / how-to-apply / info-for-hosts). This is bespoke, discipline-bound programme content — clearly faculty-owned.

A cross-cutting observation: a meaningful share of this topic is **noise rather than content** — `_recache` URL twins (Law JD/MLM subjects), `ow` SSO/redirect form-targets (ABP, Biomedical), and low-word `link-farm` index stubs and GRD student-profile pages (Law). Stripping those, the *substantive* forms-admin estate is closer to ~150 pages.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Faculty "list of forms" hubs + the discipline-specific forms themselves (ABP, FFAM, Dental)	"Accept your offer / get started" restatements (Law JD+Masters, Biomedical)
Discipline-specific GRD milestone <i>requirements</i> (Law PhD/MPhil milestones)	Enrolment & re-enrolment mechanics (Law, ABP)
Conservatorium enrolment/ensemble/permission forms (FFAM)	Extensions & special consideration (Law, ABP, Education)
Course-specific placement checks (AHPRA, course-specific) (MDHS)	Generic check <i>definitions</i> — what a WWCC / police check is (MDHS, Education)
Professional/disciplinary conduct rules (Law)	Cross-institutional study & overloading (already hub-hosted, tagged via Arts)

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Bespoke global-program & internship admin (Law partnerships, Arts/ABP internships)	Generic policy pages (FEIT Calculator Policy); candidature "how it works" framing

The balance tips further toward "overlap" than course-planning did. The genuinely faculty-owned material is real (forms hubs, discipline milestones, placement and conduct rules, global programmes) — but the transactional front-of-house (offer, enrolment, extensions, special consideration, the *definition* of a compliance check) is restated faculty-by-faculty against processes the hub already owns, and two pages in this set already live on the hub.

Recommendation

- **Hub owns the transactional spine:** "Get Started / accept your offer", enrolment & re-enrolment, overloading, cross-institutional study, extensions and special consideration — as the single source of truth. Two such pages (`/course-admin/cross-institutional-study` , `/course-admin/.../overloading`) are *already* central; faculties should link to them, not re-author them.
- **Hub owns generic check definitions; MDHS owns the course mapping.** Publish one canonical "what a WWCC / police check / immunisation evidence is" set centrally; let MDHS keep only the *course-specific* "which checks does my degree need" layer (AHPRA, course-specific checks, the Sonia tracker). This alone retires most of the 36-page compliance sprawl.
- **Faculties keep their forms hub, discipline milestones, conduct rules and bespoke programmes** — but to a **standard "Forms & admin" page pattern** (consistent label, consistent location, links out to gated forms) so ABP, FFAM, Dental and Law stop each inventing their own.
- **Add one hub gateway:** `students.unimelb.edu.au/admin/faculty-forms` — a thin index linking to every faculty's forms hub, so faculty-specific forms are discoverable from the centre (they currently aren't).
- **Highest-value fix:** clean and consolidate the compliance + transactional layer — collapse MDHS's per-check definition pages to a central reference, retire faculty restatements of offer/enrolment/extensions, and strip the `_recache` twins and `@w` form-target redirects. That removes the largest block of near-duplicate, high-maintenance pages in the topic while leaving every faculty's genuinely unique admin intact.

Topic Deep-Dive: Course Planning

Cross-faculty analysis from the full crawl (supersedes the earlier partial-crawl version). June 2026.

207 course-planning-tagged pages sit across the faculty estate — the third-largest content topic after subjects/timetabling and research candidature. The volume is dominated by the genuinely degree-specific material (per-program sample plans and per-major subject-selection guides), **not** generic "how to plan" advice. The central hub provides the *tools* (My Course Planner, the Handbook) and general advice; the faculties provide the degree-specific *plans*.

Distribution — who holds it

Unit	Pages	What dominates
Melbourne Business School (school · FBE)	58	One sample course plan per master's program + variants
Biomedical Sciences (school · MDHS)	37	First-year subject planning, majors, breadth, honours
Architecture, Building & Planning (MSD)	29	Per-degree + double-masters sample course plans
Science	26	Per-major "getting started" guides + course guides
Education	20	Placement-bound program planning (ITE)
Law	11	JD/MLM course structure, advising, acceleration
Business & Economics (FBE)	8	Honours planning
Arts	6	Course-structure overview, Diploma in Languages
Fine Arts & Music	6	Subject enrolment, music performance planning
Medicine, Dentistry & Health Sciences	4	Registration-bound (AHPRA, psychology streams)
Engineering & IT (FEIT)	2	Re-hosts My Course Planner + resources
Total	207	

Two schools (MBS, Biomedical) alone account for **46%** of all course-planning content — a direct consequence of the school-level fragmentation seen elsewhere in the audit.

The nine types of course-planning content

- Degree-specific sample course plans / course maps** — subject-by-semester plans for a named program. The largest category by far. *MBS* (one per master's program — Management, Finance, International Business, 150/200-point, research pathways); *ABP/MSD* (per-degree and double-masters combinations — Architecture/Construction, Landscape/Urban Planning, etc.).
- "Getting started" subject-selection guides by major/discipline** — which subjects, in what order, for a major. *Science* ("Mathematics & Statistics / Physical Sciences / Geography / Earth Sciences / Chemical Sciences / Psychological Sciences... starting in the Bachelor of Science"); *Biomedical* ("Plan your First Year Subjects", "Majors").
- Course-structure overviews / course guides** — high-level "how the degree is structured." *Science* course guides (Bachelor of Science / Agriculture / Graduate coursework); *Arts* "Overview of course structure"; *Law* "JD course structure and plans"; *Biomedical* "Bachelor of Biomedicine at-a-glance".
- Breadth, electives, concurrent diplomas & enrichment** — broadening options. *Biomedical* "Breadth" / "Concurrent Diplomas" / "Study Abroad & Exchange"; *Arts & Law* "Diploma in Languages" / "Concurrent Diploma with the JD".
- Prerequisites, requisites & quota subjects** — enrolment rules. *Science* "Quota subjects" (1,774w); *Law* "Prerequisites and Recommended Requirements".
- Faculty-specific enrolment, timetabling & load planning** — distinct from the hub's generic enrolment. *Law* "Enrolment & Re-Enrolment | JD", "Time Commitment and Timetabling", "Acceleration Guidelines"; *Education* "Student Timetabling", "Subject Enrolment"; *MBS* "Enrolment and Timetabling"; *FFAM* "Conservatorium Subject Enrolment Forms".

7. **Honours planning** — a category in its own right at *FBE* (most of its course-planning pages): "What is Honours?", "Honours Entry & Application", "Bachelor of Commerce (Honours)", "Honours Convenors". Also *Biomedical* "Deans' Honours List".
8. **Research-project / thesis planning** — *Science* "Research Project Subjects", "Master of Science research projects", "Research Project Topic Areas"; *Law* "Minor Thesis option"; *Biomedical* "UROP".
9. **Professional-registration-bound planning** — for accredited degrees, planning is tied to placement/registration. *Education* "Early Childhood and Primary / Primary / Secondary", "Placement Allocation Process", "LANTITE"; *MDHS* "AHPRA Registration", "Clinical/Professional Psychology".

A cross-cutting tenth pattern: several faculties **re-surface the central tool** — *FEIT*'s top two pages are literally "My Course Planner" and "Faculty Course Planning Resources" — and most carry a generic **course-planning advice/advising** page (Law "JD course planning and advice", Biomedical "Course Planning").

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidates)
Sample course plans per degree (MBS, ABP)	Generic "how to plan your course" advice
Per-major subject-selection guides (Science, Biomedical)	Re-hosted "My Course Planner" (FEIT)
Honours pathways (FBE)	Faculty restatements of enrolment mechanics the hub owns
Research-project / thesis planning (Science, Law)	Handbook-derived content already canonical centrally
Registration-bound planning (Education, MDHS)	

Most course-planning content is **legitimately faculty-owned** — it's degree-specific and discipline-bound. The duplication is the thinner top layer: generic planning advice, re-hosted tools, and enrolment-mechanics restatements.

Recommendation (course-planning under hub-and-spoke)

- **Hub owns:** My Course Planner, the Handbook, and general "how to plan / enrol / take breadth" advice (single source of truth).
- **Faculty owns:** degree-specific sample plans, major subject-selection guides, honours, research-project and registration-bound planning.
- **Add one hub gateway:** students.unimelb.edu.au/your-course/faculty-course-planning — a thin page linking to every faculty's sample plans and course guides, so degree-specific planning is discoverable from the centre (it currently isn't).
- **Stop re-hosting the tool:** faculties should link to My Course Planner, not reproduce it.
- **Standardise the entry pattern:** each faculty exposes a "Plan your course" page → links to (a) its degree sample plans and (b) the hub planner — consistent label and location across faculties.

Topic Deep-Dive: Placements & Work-Integrated Learning

Cross-faculty analysis from the full crawl. June 2026.

206 placements/WIL-tagged pages sit across the faculty estate — a mid-sized topic, but the single most lopsided one in the audit: nearly half (96 pages) is held by **one faculty, MDHS**, and the central hub holds almost none. This is overwhelmingly **faculty-owned and legitimately so** — placements are bound to professional accreditation, host-organisation relationships, and named credit-bearing subjects, none of which can be centralised. The duplication that exists is *intra*-faculty (URL-migration churn within FEIT, repeated before/during/conclusion templates within MDHS), not hub overlap.

Distribution — who holds it

Unit	Pages	What dominates
Medicine, Dentistry & Health Sciences	96	Clinical-placement compliance spine: pre-placement checks, per-department before/during/conclude guides
Law	36	MLS Clinics, legal internships, global/partner programs, admission to practice
Education	24	ITE professional-experience machinery: allocation, structure, conduct, hurdles
Engineering & IT (FEIT)	17	Internship subjects (self-sourced / university-sourced / international) + Practice Hurdle
Arts	13	Experiential-learning internship subjects (Journalism, EMA, SCC, Social Impact)
Architecture, Building & Planning (MSD)	9	ABPL90434 construction-management internship + vocational placements
Fine Arts & Music	5	Ignite LAB industry incubator + research-student opportunities
Biomedical Sciences (school · MDHS)	4	Redirects to study.unimelb major pages (no real WIL content)
Science	2	Internship subjects + industry projects
Total	206	

MDHS alone holds **47%** of the topic — and almost all of it is the clinical-placement *compliance* apparatus (immunisation, police/WWCC/NDIS checks, the Sonia tracking system, fitness-to-practice), which no other faculty needs at this depth. Placements are the most faculty-concentrated topic in the entire estate.

Types of Placements & Work-Integrated Learning content

- 1. Pre-placement compliance & clearance** — the immunisation/screening gate students must clear before any clinical placement. *MDHS* dominates: "MDHS Pre-Placement Requirements", "Summary of checks", "Working with Children Check", "NDIS Worker Screening Check", "Australian/Overseas Police Check", and a full infection series ("Hepatitis B", "Tuberculosis", "MMR", "Varicella", "Pertussis", "Influenza", "COVID-19", "Mask Fit Testing"). *Education* carries a thin equivalent ("Working with Children Check"). This is the largest single cluster and is wholly accreditation-driven.
- 2. Placement lifecycle guides (before / during / conclusion / day one)** — a templated per-department walkthrough of the placement itself. *MDHS* repeats this structure across every clinical school: "Before placement / During placement / Conclusion of placement / Day one" for Melbourne Dental School, Department of Nursing, Clinical Audiology, Speech Pathology, MSPGH, and the psychology streams (clinical / professional / neuropsychology). The repetition is structural, not redundant — each department's content differs.
- 3. Credit-bearing internship & WIL subjects** — named, assessed subjects where the placement *is* the curriculum. *FEIT* "Self-sourced / University-sourced / International internships", "Internship subjects", "Not-for-Credit Internships"; *Arts* "Journalism Internship", "EMA Internship Subject", "SCC Graduate Internship Subjects", "Internship: Personal & Career Growth"; *ABP* "ABPL90434 Construction Management Internship" (+ "Self-sourced" / "How to apply" / "Information for hosts"); *Science* "Internships in the Faculty of Science", "Industry projects for graduate students".

4. **Clinical & legal clinics (live-client practice)** — supervised real-client work delivered as subjects. *Law* is the centre of gravity: "Melbourne Law School Clinics", "Legal Internship", "Public Interest Law Clinic", "Sustainability Business Clinic", "Tax Clinic", "Stateless Legal Clinic", "Street Law", "NDIS and Disability Benefits Clinic", "Indigenous Legal Advocacy Clinic", "Disability Human Rights Clinic", "Law Apps".
5. **Initial Teacher Education professional experience** — the placement machinery for a registration-bound degree. *Education*: "Placement Allocation Process", "Placement structure", "Professional Conduct", "Unsatisfactory performance", "Health and safety", "Attendance Hurdles", "Permission to Teach (PTT) Information", "Initial Teacher Education Assessment (ITEA)", "Placement seminars", plus the 5,447-word "FAQs". Placement *is* the spine of the M.Teach.
6. **Host-organisation & partnership content** — pages aimed at the employer/host, not the student. *MDHS* "Information for current host organisations", "Information for Prospective Host Organisations", "Why should your organisation place students?", "How is the placement arranged?"; *Arts* "Invitation to host an intern"; *ABP* "Information for hosts | ABPL90434". A distinct audience the hub does not serve.
7. **Global, partner & interstate placement programs** — placements done elsewhere or with another institution. *Law* "Degree Partnerships", "NUS Master of Laws (LLM)", "Global and interstate subjects", "International Legal Internship", "British Institute of International and Comparative Law Internship", "Non-partner programs"; *MDHS* "Overseas Placements".
8. **Placement logistics, rights & support** — the practical and pastoral wrapper around a placement. *MDHS* "Travel", "Insurance", "Visas", "Obligations, Rights & Responsibilities", "Personal information & Intellectual Property", "Getting help", "Sonia" (the placement-tracking system), "Key Contacts", "Student Testimonials"; *Education* "Roles and responsibilities", "Attendance and absences".
9. **Fitness / conduct to practise** — the professional-standards regime that governs students on placement. *MDHS* "Student Fitness to Practice", "MDHS Fitness to Practice Process", "Examples of Concerns"; *Education* "Professional Conduct"; *Law* "Admission to Practice". Tied directly to registration and the right to be in a clinical/professional setting.

A cross-cutting note on noise: FEIT's 17 pages collapse to ~9 unique once the `progress-your-career` → `student-experience` URL migration and its redirects are de-duplicated, and several MDHS entries are 404/redirect stubs ("DDS3 Year Level Coordinator"). The *real* placements footprint is tighter than 206 — the inflation is migration churn, not genuine content.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
MDHS clinical compliance spine — immunisation, checks, Sonia	Generic "what is WIL / experiential learning" framing (Arts intro)
Per-department placement lifecycle guides (MDHS)	Generic insurance / travel / visa statements the hub could own once
Credit-bearing internship subjects (FEIT, Arts, ABP, Science)	"Obligations, rights & responsibilities" boilerplate restating University policy
Live-client clinics & legal internships (Law)	Student fitness/conduct pages that cite central policy (MPF13...)
ITE professional experience (Education)	—
Host-organisation content (MDHS, Arts, ABP)	—
Global / partner placement programs (Law, MDHS)	—

The balance tips harder toward "faculty-owned" than any other topic in the audit. Almost everything here is bound to a named subject, a host relationship, or a professional-registration requirement. The only true hub overlap is a thin layer of generic framing (what WIL is) and University-wide policy restatements (insurance, IP, conduct) that each faculty re-expresses locally.

Recommendation

- **Hub owns very little — by design.** It should own only the cross-cutting wrappers: one canonical statement each on placement **insurance, travel/visas, and intellectual-property/rights**, plus a single "What is Work-Integrated Learning at Melbourne?" explainer. Faculties link to these rather than restating University policy.

- **Faculties keep everything discipline-bound:** compliance gates (MDHS), credit-bearing internship subjects, clinics, ITE professional experience, and all host-organisation content. None of this can or should move to the centre.
- **Add one hub gateway:** `students.unimelb.edu.au/your-course/work-integrated-learning` — a thin directory routing students to each faculty's placement/internship landing page (MDHS Student Placements, FEIT Internships, Arts Experiential Learning, Education professional experience, Law clinics). WIL is currently invisible from the centre; a student cannot discover their faculty's offering from the hub.
- **Set a placement-page standard** so every faculty's WIL hub exposes the same shape: (a) is it credit-bearing, (b) eligibility, (c) how to apply / get allocated, (d) compliance / pre-requisites, (e) host info. MDHS and Education already approximate this; FEIT / Arts / ABP are inconsistent.
- **Single highest-value fix:** clean up FEIT's internship URL migration (the `progress-your-career` → `student-experience` redirect chain and duplicate FAQ) and prune MDHS's 404/stub pages — then publish the hub WIL gateway above. The content is sound; **discoverability and migration hygiene** are the gap, not duplication.

Topic Deep-Dive: Contacts & Support

Cross-faculty analysis from the full crawl. June 2026.

177 contacts-support-tagged pages sit across the faculty estate — a mid-sized topic, but the most *diffuse* one in the audit. Unlike course-planning, almost none of it is genuinely discipline-specific: it is the long tail of faculty-flavoured restatements of cross-cutting services the hub already owns — wellbeing, equity/disability, IT support, careers, mentoring, clubs, and "who do I contact" directories. Ownership is split and heavily duplicated: Arts and Law alone hold **86 of 177 pages (49%)**, much of it link-farm shells and `_nocache`/duplicate URLs rather than substantive content.

Distribution — who holds it

Unit	Pages	What dominates
Arts	50	Mentoring/peer programs, GR support shells, AV/facilities, many duplicate <code>_nocache</code> URLs
Law	36	The "Academic Support & Wellbeing" tree, careers, mentor program, academic-skills centre
Medicine, Dentistry & Health Sciences	35	Placement-bound "getting help"/key-contacts, student enrichment, clubs
Architecture, Building & Planning (MSD)	19	IT support, studio/facilities, clubs & societies, newsletters
Engineering & IT (FEIT)	14	FAQ pages (internship, scholarship), IT contact, international support
Fine Arts & Music	9	Tech support & facilities, grants, research-student services
Science	5	Support-and-contacts directory, GR contacts, scholarship FAQ
Education	4	ITE assessment + three "contact us"/placement link-farm stubs
Dental (school · MDHS)	2	Student resources hub + forms
Business & Economics (FBE)	1	PhD resources & support
Melbourne Business School (school · FBE)	1	Key Dates and Contacts
Biomedical Sciences (school · MDHS)	1	Health-hub redirect (0w)
Total	177	

No faculty *owns* this topic the way MBS owns course-planning — it is spread thin. The two largest holders (Arts, Law) inflate their counts with low-value pages: of Arts' 50, roughly a third are `_link-farm` stubs or duplicate `_nocache`/path-variant URLs of the same page.

Types of Contacts & Support content

- Faculty IT & tech support / facilities** — the most substantive, genuinely faculty-owned cluster, because it documents *physical* discipline kit. *ABP* "IT Support" (3,247w — Affinity Suite licensing, BDes/MSD lab software); *FFAM* "Tech Support and Facilities" (3,501w — equipment loans, storerooms, digital printing for VCA & MCM); *FEIT* "Student IT Contact"; *Arts* "Audio/Visual loan equipment", "Video edit suites". Studio-bound disciplines need this; a generic central IT page can't replace it.
- Wellbeing, equity & disability support** — *Law* runs a whole sub-tree: "Wellbeing", "Student Equity and Disability Support", "Extensions", "Special consideration", "Registration for ongoing support". Note the wording leads with University-wide emergency/Security numbers and Counselling and Psychological Services — i.e. it re-states central services with a faculty contact bolted on. *Education* "Wellbeing and Support"; *MDHS* "Getting help" (incidents, harassment, insurance, legal advice during placement).
- Contact directories / "key contacts"** — the literal "who do I email" pages. *Science* "Support and contacts for students", "Important contacts for graduate researchers"; *MDHS* "Key Contacts" (placement coordinator as first point of contact + 24/7

- Security), "Feedback, Reporting Concerns & Complaints"; *MBS* "Key Dates and Contacts"; *Education / Law* "Contact us" stubs.
4. **Mentoring & peer programs** — discipline-cohort mentoring, legitimately faculty-run. *Arts* "Melbourne Peer Mentor Program", "Academic Mentoring", "Peer Assisted Study Sessions"; *Law* "Mentor Program", *MDHS* Chancellor's Scholars mentoring (incl. individual mentor profile pages — Garry Zhu, Zahra Ataie).
 5. **Student life, clubs & societies, student voice** — *Law* "Student Life and Societies", "MLS Feedback"; *MDHS* "Student Clubs and Societies", "Student Leadership", "Student Advisory Council", "Chat Fest"; *ABP* "Clubs and Societies", "Student Newsletters", "MSD Student Curator Group"; *Arts* "Arts Student Advisory Council".
 6. **Careers & employability support** — *Law* "Career Services", "Employability in Law", "1:1 Career Consultations", "Career Support for Graduate Researchers"; *Arts* "Arts Career Mentoring", "Job Ready Program"; *FFAM* "Employability in Fine Arts and Music". (Careers overlaps the central Careers Online / hub careers service heavily.)
 7. **Academic-skills support** — *Law* "Ian Malkin Centre for Legal Academic Skills" (+ "Writing for law", "Academic skills resources", "About the Centre and facilities"); *Arts* "Academic resources", "GSHSS Academic Culture and English Tutorials", "Language placement tests". The discipline-specific framing (legal writing, language tutorials) is real; the generic "academic skills" framing duplicates the central Academic Skills unit.
 8. **FAQ pages** — a recurring genre, mostly *FEIT*: "Frequently Asked Questions" (internship, 3,148w — and a duplicate redirect of the same page), "Scholarship FAQ", "Community Awards FAQs", "Dean's Honours Award FAQs"; *Science* "FAQs about scholarships". These bundle support + process Q&A by service area.
 9. **Forms hubs & catch-all "resources & support" shells** — *Dental* "Student Resources", "Forms"; *MSD* "List of Forms"; *FBE* "Resources and Support"; *Arts* "Resources and support" / "Facilities and resources". Often thin link-farms pointing back to faculty or central tools.

A cross-cutting tenth pattern is **duplication and stubs**: Arts carries multiple identical "Overview of course structure", "Graduate Research Orientation", and "Commence your candidature" pages under both `.../commencement/...` and `.../plan-your-program2/...` paths (plus `_nocache` twins), and several units tag *individual people* (researcher and mentor profile pages) into this topic — neither is real "contacts & support" content.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
IT / tech support tied to discipline kit & labs (ABP, FFAM, FEIT)	Generic wellbeing / counselling / emergency text (every faculty restates it)
Studio facilities, AV loan equipment, edit suites (ABP, Arts)	Generic "academic skills" framing (duplicates central Academic Skills)
Discipline mentoring & peer programs (Arts, Law, MDHS)	Generic careers/employability (duplicates Careers Online)
Placement-specific "getting help"/key contacts (MDHS)	Equity & disability <i>policy</i> (central Student Equity owns this)
Faculty-specific clubs, societies, student voice (all)	"Contact us" / "Resources & support" link-farm stubs
Faculty forms hubs (Dental, MSD)	Duplicate <code>_nocache</code> /path-variant pages; individual-person pages

The balance tips toward **hub-overlapping**: the substantive, defensibly-local material is the IT/facilities cluster, discipline mentoring, clubs, and placement-specific help. Wellbeing, equity, careers and generic academic-skills text — a large share of Law's and Arts' counts — are faculty restatements of services the hub already owns, and the topic is further bloated by duplicate and stub pages.

Recommendation

- **Hub owns** the cross-cutting safety net as single source of truth: wellbeing & counselling, equity & disability, emergency/Security contacts, central Academic Skills, and Careers Online. Faculties should link to these, not re-state them (Law's wellbeing sub-tree is the clearest consolidation target).
- **Faculties keep** what is physically or socially local: IT/tech support tied to discipline software and labs, studio facilities and AV/equipment loans, discipline mentoring and peer programs, clubs/societies and student voice, and placement-specific "getting help"/key-contacts (MDHS).

- **Add one hub standard — a "Get help / key contacts" page pattern:** every faculty CS section exposes a single, consistently-labelled contacts page (faculty first points of contact + a link to the hub's central support services), instead of today's scatter of "Contact us" stubs, "Support and contacts", "Key Contacts" and "Getting help".
- **Stop tagging individual people and duplicate URLs** into this topic, and collapse Arts' `_nocache` /path-variant twins — this alone removes ~20–25 low-value pages and de-noises the estate.
- **Highest-value fix:** retire faculty restatements of wellbeing/equity/careers in favour of hub links, and replace them with one standard faculty "key contacts" page — turning the estate's most diffuse, duplicated topic into a thin, consistent spoke over a single hub-owned safety net.

Topic Deep-Dive: Careers & Employability

Cross-faculty analysis from the full crawl (supersedes the earlier partial-crawl version). June 2026.

141 careers-employability-tagged pages sit across the faculty estate — a mid-sized topic, but the most *evenly distributed* one in the audit: no single school dominates the way MBS owns course-planning. The headline pattern is **split and structurally duplicated** — every faculty independently maintains an "Employability in X" landing page and its own career-mentoring program, while the genuinely faculty-owned content is the discipline-specific stuff: regulated career pathways (becoming a barrister, teacher registration) and credit-bearing internship subjects.

Deeper ESI analysis is held separately in the employability workspace.

Distribution — who holds it

Unit	Pages	What dominates
Law	24	Regulated legal-career pathways + ELLIS/mentoring
Education	23	Teaching placement/registration as employability
Arts	22	Experiential-learning & internship subjects + mentoring
Engineering & IT (FEIT)	19	Career resources, ICMP, professional-skills series
Biomedical Sciences (school · MDHS)	17	One "Your career" page + 16 redirects to study.unimelb.edu.au
Architecture, Building & Planning (MSD)	13	Industry mentoring + internship/vocational placement subjects
Medicine, Dentistry & Health Sciences	13	Employability hub + mentoring programs + scholar profiles
Science	4	Internship subjects + employability hub
Fine Arts & Music	4	Ignite LAB + career mentoring + employability hub
Business & Economics (FBE)	2	Two SSO-redirect stubs (no real content)
Total	141	

Unlike course-planning, careers content is **spread almost flat across the top four faculties** (Law, Education, Arts, FEIT hold 88 of 141 pages between them). The tail is misleading: Biomedical's 17 are almost entirely thin redirects to study.unimelb.edu.au major pages, and FBE's "2 pages" are login stubs — so the *real* careers estate is smaller and more concentrated than the raw count suggests.

Types of Careers & Employability content

- The "Employability in X" faculty landing page** — the clearest duplication pattern in the topic. Almost every faculty has one, structurally identical and often near-identical in copy: *Law* "Employability in Law", *Arts* "Employability in Arts", *Science* "Employability in Science", *FEIT* "Employability in Engineering and Information Technology", *MDHS* "Employability in MDHS" ("every experience and skill you build becomes part of your growing professional portfolio"), *FFAM* "Employability in Fine Arts and Music", *Education* "Employability in Education". Seven faculties, one template.
- Regulated / discipline-specific career pathways** — genuinely faculty-owned because they're bound to a profession's accreditation. *Law* is the deepest: "Steps to Practising Law" (1,556w — admission to practice, practising certificates), "Becoming a Barrister", "Admission to Practice", and a "Career Pathways" set (Public Interest & Government, Private Sector, Business, Judiciary, Research & Academia). *Education* treats the entire teaching-registration apparatus as employability — "Permission to Teach (PTT) Information", "Working with Children Check", placement requirements.
- Credit-bearing experiential learning & internship subjects** — coded subjects with a Handbook code, owned by the faculty that teaches them. *Arts* "Experiential Learning" ("learning by doing... applying knowledge in workplaces"), "Industry Project

(ARTS30001)", "Internship: Personal & Career Growth", "Job Ready Program" (a 6-week series); *Science* "Internships in the Faculty of Science" (2,666w), "Industry projects for graduate students"; *ABP* "Internships and Vocational Placements", "ABPL90434 Construction Management Internship".

4. **Mentoring programs** — present in nearly every faculty, each branded and run locally: *Law* "MLS Mentor Program"; *Arts* "Arts Career Mentoring" (matches grad students with alumni industry experts); *FEIT* "Intercultural Career Mentoring Program (ICMP)" and "Peer Connect Program" (1,614w); *ABP* "ABP Industry Mentoring" (1,858w); *MDHS* "Mentoring Programs" (Academic, Chancellor's Scholars, Honours Alumni, Nursing, Peer); *FFAM* "Fine Arts and Music Career Mentoring"; *Education* "Career Mentoring" + "Peer Mentoring". The *kind* of program differs by discipline; the existence of one is universal.
5. **Student ambassador & leadership programs** — a recurring enrichment-as-employability category. *Arts* "Arts Student Ambassadors"; *FEIT* "Student Ambassador Leadership Program (SALP)"; *ABP* "Student Ambassador & Leadership Program" + "Construction Ambassador Program"; *Education* "Student Ambassador program"; *MDHS* "Student Leadership" + "Student Advisory Council".
6. **1:1 career consultations & practitioner-led services** — the transactional "book a careers appointment" layer. *Law* "1:1 Career Consultations" ("resume and cover letter review, job-searching strategies, key selection criteria review") and "Career Support for Graduate Researchers"; *FEIT* "Career resources" + "Professional Associations"; *Science* "Career Enrichment Program". This is the most hub-overlapping service type — the central Careers & Employability team runs the same offer.
7. **Professional-skills / industry-readiness series** — short structured programs distinct from credit subjects. *FEIT* "Professional Skills Series" (appears four times across different URL paths — three redirects, one live); *FFAM* "Ignite LAB" (1,439w, indexed twice); *Law* "ELLIS Program" (Experiential Learning for Law International Students) with per-year "2023"/"2024" sub-pages.
8. **Student & alumni career profiles** — testimonial content used as employability evidence. *Law* graduate-researcher profiles (Fia Hamid-Walker, Alumita Lekenaua, Jasmine Ali); *MDHS* Chancellor's Scholars profiles (Garry Zhu, Emily Sun, Zahra Ataie). Low-volume, high-page-count padding — each profile is its own URL.

A cross-cutting pattern worth flagging: **URL churn inflates this topic badly**. FEIT's "Intercultural Career Mentoring Program" exists at five different URLs and "Professional Skills Series" at four (mostly redirects); Arts indexes "Arts Student Ambassadors" twice and FFAM "Ignite LAB" twice. A meaningful share of the 141 is the same content under multiple paths, plus Biomedical's 16 redirect stubs and FBE's 2 login redirects.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Regulated career pathways (Law: barrister/admission; Education: PTT, registration)	The "Employability in X" landing page (7 near-identical copies)
Credit-bearing internship/experiential subjects (Arts, Science, ABP)	1:1 career consultations / resume & cover-letter advice
Discipline-specific industry mentoring (ABP, FEIT ICMP, Law MLS)	Generic "career resources" / job-search-strategy pages
Profession-bound professional bodies (FEIT "Professional Associations")	Student-ambassador & general career-mentoring boilerplate
Faculty-run programs with their own brand (ELLIS, Ignite LAB, Job Ready)	Redirect/login stubs & duplicate-URL content (Biomedical, FBE, FEIT)

The balance tilts more toward **hub-overlap than course-planning did**. The discipline-bound core (regulated pathways, coded internship subjects, industry mentoring) is legitimately faculty-owned — but the repeated "Employability in X" pages, generic consultation/resume services, and ambassador boilerplate are the same offer restated 7–10 times, on top of substantial URL-churn and redirect noise.

Recommendation

- Hub owns:** the canonical Careers & Employability service — appointment booking, resume/cover-letter/selection-criteria advice, job-search strategy, and the generic "what employability means at Melbourne" framing. This is one offer; it should have one home.

- **Faculty keeps:** regulated career pathways (Law, Education, MDHS), credit-bearing internship/experiential subjects (Arts, Science, ABP), and discipline-specific industry-mentoring programs with their own brands (ELLIS, Ignite LAB, ICMP, ABP Industry Mentoring).
- **Collapse the template:** the seven "Employability in X" pages should become *one* hub page + a thin per-faculty stub that links to the discipline-specific subjects and mentoring only — not a full restatement of the central service.
- **Add one hub gateway:** `students.unimelb.edu.au/careers/faculty-employability` — a directory linking to each faculty's internship subjects, mentoring, and regulated-pathway content, so discipline-specific careers material is discoverable from the centre.
- **Highest-value fix:** kill the URL churn and redirect stubs (FEIT's 5×/4× duplicate programs, Biomedical's 16 redirect pages, FBE's 2 login stubs). This alone removes a large fraction of the 141 without losing any real content, and makes the legitimate split legible.

Topic Deep-Dive: Scholarships

Cross-faculty analysis from the full crawl. June 2026.

141 scholarships-tagged pages sit across the faculty estate — a mid-sized topic, but a revealing one. Unlike course planning (degree-specific by nature), most of this content is **generically structured** — application rounds, terms & conditions, FAQs, recipient honour-rolls, Dean's Honours Lists — and yet **the central hub holds none of it in the crawl**. The pattern is heavily faculty-owned by *default rather than design*, dominated by a single faculty (FEIT alone is 50%), and shot through with the kind of process scaffolding (rounds, eligibility, T&Cs, winners' galleries) that is the textbook profile of a consolidation candidate.

Distribution — who holds it

Unit	Pages	What dominates
Engineering & IT (FEIT)	71	Named scholarships, application rounds, T&Cs, Dean's Honours Lists, Community Awards, recipient galleries
Law	20	Graduate-researcher (GRD) scholarship/funding/prize pages + researcher profiles
Science	13	Scholarship catalogue, FAQ, prizes, Dean's Honours List + medal winners
Arts	11	Travel/internship/conference grants + mobility & language scholarships (via <code>scholarships.unimelb.edu.au</code>)
Fine Arts & Music	6	Research-student grants, internal funding, writing-up awards
Medicine, Dentistry & Health Sciences	6	Chancellor's Scholars profiles + Indigenous student success
Business & Economics (FBE)	5	PhD stipends, fee remissions, research training & graduate-researcher prizes
Education	5	Faculty scholarships page + ambassador/international-study funding
Dental (school · MDHS)	3	Internal research grants
Architecture, Building & Planning (MSD)	1	Stray studio-archive page (mis-tag)
Total	141	

One faculty — FEIT — holds **71 of 141 pages (50%)**. This is not because engineering has more scholarships than the rest of the university; it is because FEIT has built a full sub-site (`/scholarships-prizes-and-awards/...`) with a page for every round, every named award, every year's Dean's Honours List and Community Awards gallery — much of it duplicated across two URL trees (the old `/coursework/orientation/...` path and the new `/scholarships-prizes-and-awards/...` path).

Types of Scholarships content

- 1. Named donor / sponsored scholarship pages** — one page per individual award. *FEIT* is saturated with these: "Lens Stevens Scholarship", "Ian Alexander Scholarship Round 2", "John Balfour Memorial Scholarship", "Stephen Ho Accelerator Grant", "Acusensus Scholarship for Women in STEM". *Law* GRD adds "James and Valerie McNiff Scholarship". This is the genuinely faculty-specific layer — the awards exist because a faculty/donor created them.
- 2. Application-round / cycle pages** — the same scholarship process sliced by intake. *FEIT* "Round 1 / Round 2 / Round 3 / Round 4 Scholarships", "Summer Round, 2026", "Winter Round, 2026". A scheduling artefact: each round is a near-identical page that differs mainly in dates, and several are re-hosted under the events calendar as well.
- 3. Terms & conditions / eligibility / FAQ scaffolding** — the rulebook around the money. *FEIT* "Engineering & IT Coursework Scholarship Terms and Conditions" (present twice, on two paths), "Eligibility and selection criteria", "Scholarship FAQ", "Frequently Asked Questions"; *Science* "Frequently asked questions about scholarships" (1,962w — the single longest page on the topic). This is generic process content, not discipline knowledge.

4. **Scholarship catalogues / landing pages** — the "here's what's available" index. *Science* "Awards, prizes and scholarships", "Scholarships", "Open scholarships", "Industry, external and other research scholarships"; *FEIT* "Scholarships, Prizes and Awards", "Undergraduate Students", "Coursework Students", "Graduate Researchers"; *Education* "Faculty of Education Scholarships". Several Arts entries point directly at the **central scholarships.unimelb.edu.au** catalogue ("Faculty of Arts Internship Grants", "Conference Grants") — evidence a central award system already exists but isn't surfaced as the hub's own.
5. **Dean's Honours Lists & academic-merit recognition** — annual high-achiever lists. *FEIT* "2022 / 2023 / 2024 Dean's Honours List" + "Honour roll" + "Eligibility and selection criteria"; *Science* "Dean's Honours List", "Dean's Honours List 2023", "2023 Medal Winners", "2024 Medal Winners". A recurring, near-templated content type that accretes one new page per year.
6. **Recipient profiles & winners' galleries** — recognition/marketing content. *FEIT* "Scholarships, Prizes and Awards Recipients", "Community Awards" + "2022–2025 winners" + four years of "Spotlight Celebration Image Gallery"; *MDHS* "Chancellor's Scholars" profiles (Garry Zhu, Emily Sun, Zahra Ataie); *Law* GRD researcher profiles (Renuka Balasubramaniam, Janelle Koh, etc.). More celebration than transaction — arguably not "current student services" at all.
7. **Prizes & awards (distinct from scholarships)** — merit prizes rather than funding. *FEIT* "Coursework Prizes", "Undergraduate Prizes", "Graduate Research Prizes", "Stephen Ho Innovation Awards"; *Science* "Prizes for top performing students"; *FBE* "Graduate researcher prizes and awards"; *Law* "Student Published Research Prize". Frequently bundled into the same "Scholarships, Prizes and Awards" trees.
8. **Travel, conference, mobility & internship grants** — funding tied to an activity. *Arts* "Faculty of Arts Travel Grant", "Conference Grants", "Internship Grants", "Melbourne Mobility Awards", "Arts Global Languages Scholarship"; *FEIT* "Conference Travel Grant", "Student Exchange Funding and Scholarships"; *FFAM* "Grants and internal funding". Overlaps heavily with the *overseas/exchange* and *research-candidature* topics.
9. **Graduate-researcher (HDR) scholarships & funding** — stipends, fee remissions, write-up awards. *FBE* "FBE Doctoral Program Stipend and Tuition (Fee Remission) Scholarships", "Stipends and fee remissions", "Research training and development scholarships"; *FFAM* "Scholarships & Studentships", "MCM Director's Writing Up Award"; *Science* "Graduate research scholarships"; *Dental* "Melbourne Dental School Internal Grants"; *FEIT* "PhD Write Up Award". A distinct audience (HDR) whose funding is partly governed centrally by the Graduate Research school.

A cross-cutting observation: at least **a third of the FEIT corpus is duplication or churn** — the same scholarship/T&C/round page reachable from two URL trees, plus one new page per year for each Honours List and Spotlight gallery. The topic's page-count is inflated by structure, not substance.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Named donor/sponsored awards specific to a faculty (FEIT, Law GRD)	Generic scholarship FAQs, eligibility and "how to apply" process content
Discipline-specific HDR stipends & internal research grants (FBE, FFAM, Dental)	Application-round pages (Round 1–4, Summer/Winter) — date-driven, near-identical
Faculty-specific prizes tied to named subjects/competitions	Terms & conditions templates (FEIT carries the same T&C on two paths)
Activity grants bound to faculty programs (Arts mobility, FFAM funding)	Dean's Honours Lists & recipient/winner galleries (recognition, not service)
	Faculty catalogues that merely re-list awards already in <code>scholarships.unimelb.edu.au</code>

The balance here is the **inverse of course planning**. There, most content was legitimately degree-specific. Here, the genuinely faculty-owned layer is thin (the specific *awards* and HDR funding), while a large majority of pages — rounds, T&Cs, FAQs, Honours Lists, recipient galleries, catalogue restatements — is generic process and recognition content that a central scholarships system could own or template.

Recommendation

- **Hub owns the spine:** the University already runs `scholarships.unimelb.edu.au` (Arts links straight into it). Promote it to the canonical, hub-surfaced catalogue + application engine — one place for eligibility, application rounds, T&Cs and FAQs, parameterised per award. Faculties stop hand-maintaining round/T&C/FAQ pages.
- **Faculties keep the awards, not the plumbing:** each faculty retains a thin page describing *its* named/donor scholarships and discipline-specific HDR funding, deep-linking to the central system for the apply-and-rules mechanics.
- **Add one hub gateway:** `students.unimelb.edu.au/your-finances/scholarships` (or under support/finance) — a single entry point listing every faculty's awards and the central catalogue. The hub currently holds **zero** scholarship pages, so students have no central starting point at all.
- **Set a recognition standard:** Dean's Honours Lists, winners' galleries and recipient profiles are marketing/recognition, not current-student services — move them out of the services IA (to faculty news/alumni) or template them so they stop accreting one new orphan page per year.
- **Highest-value fix:** de-duplicate FEIT. Collapsing the two parallel URL trees and the year-by-year Honours/Spotlight churn would remove roughly a third of this topic's pages and fix its single worst maintenance liability — before any cross-faculty consolidation even begins.

Topic Deep-Dive: International Student Support

Cross-faculty analysis from the full crawl. June 2026.

135 international-tagged pages sit across the faculty estate — a mid-sized topic. The headline is a label mismatch: despite the "international student support" name, the content is overwhelmingly **outbound global mobility** (study abroad, exchange, overseas study, degree partnerships, travelling studios, international internships), not inbound support for international students. It is **legitimately faculty-owned** (the partnerships and programs are discipline-specific), but the genuine welfare/compliance content an international student actually needs — visas, OSHC, ESOS/CoE, work rights — is essentially **absent from the faculties and belongs to the hub**. Law's headline count is inflated by GRD researcher profiles and link-farm stubs.

Distribution — who holds it

Unit	Pages	What dominates
Law	55	Degree partnerships + Study Overseas + GRD researcher profiles
Architecture, Building & Planning (MSD)	28	Travelling Studios archive + subjects with a travel component
Engineering & IT (FEIT)	25	Study-abroad/exchange, international research, mobility funding
Arts	10	Overseas experience + mobility funding (mostly URL duplicates)
Medicine, Dentistry & Health Sciences (MDHS)	7	Overseas-placement logistics (travel, visas, insurance, police checks)
Melbourne Business School (school · FBE)	7	Master of International Business dual degrees + research pathways
Fine Arts & Music	2	International ensemble/touring & support scheme
Biomedical Sciences (school · MDHS)	1	Study Abroad and Exchange
Total	135	

Three units — Law, ABP and FEIT — hold **80%** of the topic, and all three are dominated by *mobility* content (sending Melbourne students out), not *international-student* content (supporting students who came in). No faculty owns a substantive inbound-support presence; that gap is structural, not accidental.

Types of International Student Support content

- 1. Outbound exchange & study-overseas programs** — the single largest theme: semester-for-credit study at partner institutions. *Law* "Study Overseas program", "Exchange Partners", "Non-partner programs"; *FEIT* "Study abroad and exchange", "Global Experience"; *Arts* "Overseas experience"; *Biomedical* "Study Abroad and Exchange". This is the canonical "global mobility" pattern, replicated per-faculty.
- 2. Named degree partnerships & dual degrees** — bilateral arrangements with specific overseas universities, each its own page. *Law* runs the deepest set — "Degree Partnerships", "New York University JD-LLM", "University of Oxford BCL or MLF", "University of Cambridge LLM/MCL", "NUS Master of Laws", "Peking University", "Leiden University", "Shanghai Jiao Tong University". *FBE/MBS* "Master of International Business Dual Degrees" (Inbound/Outbound). Inherently discipline-specific and uncentralisable.
- 3. International research placements & summer programs** — short-term overseas research for coursework/research students. *FEIT* dominates: "International Research Opportunities", "KAIST Visiting Student Researcher Program", "POSTECH", "Kyoto University KU-STAR", "University of Twente Summer Research Program", "Catholic University of Louvain Summer Research Program".
- 4. Travelling studios & subjects with a travel component** — discipline-specific subjects delivered overseas, plus a deep year-by-year archive. *ABP/MSD* almost entirely: "Travelling Studios", "Southeast Asia Travelling Studio", "Subjects with a Travel Component", and a long "Past Studios" run (2008–2025). Legitimate but heavily archival.

5. **International internships & intercultural career programs** — work-integrated and career content with a global frame. *FEIT* "International internships" (the topic's largest single page, 4,609w), "Intercultural Career Mentoring Program", "Global Skills Series", "Global Skills Series"; *Law* "International Legal Internship", "British Institute of International and Comparative Law Internship", "ELLIS Program".
6. **Mobility funding, scholarships & travel grants** — money attached to going overseas. *FEIT* "FEIT Student Exchange Funding and Scholarships"; *Arts* "Faculty of Arts Travel Grant", "Melbourne Mobility Awards", "Arts Global Languages Scholarship"; *Law* "Scholarships, Funding and Prizes → International".
7. **Genuine inbound international-student support** — the thin slice that actually matches the topic label, and it sits in exactly one faculty. *FEIT* only: "International Student Support", "International Student Resources", "New Student Checklist (International Students)", "Welcome to Melbourne: International Student Webinars", "Graduate Coursework Students (International)". These are largely *re-surfacing hub services* for FEIT's intake, not original welfare content.
8. **Overseas-placement compliance (professional degrees)** — for accredited programs, going abroad triggers regulatory logistics. *MDHS* only: "Travel", "Visas", "Insurance", "Overseas Police Record", "Overseas Placements" — placement-bound and genuinely faculty-specific.
9. **GRD researcher profiles & link-farm stubs (noise)** — a large share of Law's 55 is individual PhD-candidate profiles ("Wilson Lui", "Andrea Furger", "Daria Vasilevskaia", and ~20 more) and thin link-farm pages ("Careers in Judiciary", "International"). Tagged international by association, not because they are international-student content.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Named degree partnerships (Law NYU/Oxford/Cambridge/NUS)	"International Student Support" / "Resources" (FEIT re-surfaces hub services)
Discipline-specific exchange partner lists (Law, FEIT)	Generic "Welcome to Melbourne" / new-student onboarding for internationals
Travelling studios & travel-component subjects (ABP)	Visa / OSHC / ESOS / work-rights guidance (hub's regulatory remit — and largely missing here)
International research placements (FEIT KAIST/POSTECH/Kyoto)	Generic mobility "how exchange works" framing duplicated per-faculty
Overseas-placement compliance for accredited degrees (MDHS)	Mobility scholarship <i>concepts</i> (vs faculty-specific award rules)
Master of International Business dual degrees (MBS/FBE)	GRD profiles & link-farm stubs (not this topic at all)

The balance is **strongly faculty-owned but mislabelled**: the bulk is legitimate *outbound mobility* that no central team could write. The true hub-overlap is small (FEIT's onboarding pages) — but the bigger finding is an **absence**: the inbound-support and compliance content the topic name implies is not in the faculties at all, confirming the hub already owns it.

Recommendation

- **Hub owns inbound international-student support outright**: visas, OSHC, ESOS/CoE, work rights, arrival/orientation, and the international student welfare service. The faculty estate already defers here — keep it that way and resist faculties re-creating it (FEIT's "International Student Support"/"Resources" pages should link, not duplicate).
- **Faculties keep global mobility**: degree partnerships, exchange partner lists, international research placements, travelling studios, and dual degrees are discipline-specific and stay local.
- **Re-label and split the topic**: "International" currently fuses two unrelated journeys — *outbound mobility* (faculty) and *inbound support* (hub). Treat them as separate IA topics so neither hides the other.
- **Add one hub gateway**: students.unimelb.edu.au/study-and-exchange/global-opportunities — a thin index linking to every faculty's exchange, partnership, travelling-studio and international-research programs, since outbound mobility is currently undiscoverable from the centre.

- **Highest-value fix:** clean Law's tag — strip the ~25 GRD researcher profiles and link-farm stubs from this topic. They roughly double Law's apparent footprint and distort the whole distribution; once removed, the real shape (mobility-dominated, ~110 substantive pages) is clear.

Topic Deep-Dive: Graduation

Cross-faculty analysis from the full crawl. June 2026.

125 graduation-tagged pages sit across the faculty estate — a mid-sized topic, but the tag is a near-total misnomer. Almost none of it is about the graduation *ceremony* or the transactional spine of *completing* a degree (apply to graduate, eligibility, eStudent, the ceremony itself) — that material lives on the central hub and is barely tagged here. What the tag actually captures is the **end-of-degree lifecycle as faculties experience it**: research-candidature milestones and thesis submission, honours and Dean's-award recognition, graduate-research prizes and travel grants, and graduate-cohort enrichment. It is overwhelmingly **faculty-owned and discipline-bound**, dominated by a single faculty (Arts), with a thin layer of hub-overlapping orientation/enrolment restatements.

Distribution — who holds it

Unit	Pages	What dominates
Arts	61	Graduate-research candidature lifecycle (milestones → thesis → conversion) + UG/PG enrichment
Engineering & IT (FEIT)	21	Graduate-research scholarships, prizes, travel grants + graduate orientation
Architecture, Building & Planning (MSD)	20	Dean's Honours Awards, mentoring, sample course plans
Medicine, Dentistry & Health Sciences	11	Placement conclusion + student-enrichment / mentoring
Fine Arts & Music	8	Research-student progress reviews, grants, enrolment
Business & Economics (FBE)	2	Graduate-researcher prizes + Dean's Honours List
Education	1	Master of Teaching (Early Childhood)
Biomedical Sciences (school · MDHS)	1	Biomedicine Graduate Pathways
Total	125	

Arts alone holds **49%** of the topic — almost all of it the graduate-research candidature pathway (/students/graduate-research/ . . .). Together Arts and FEIT account for **66%**: this tag is really "graduate-research lifecycle + recognition," concentrated in the two faculties with the deepest research-candidature content.

Types of Graduation content

- Graduate-research candidature lifecycle** — the spine of the topic: commencing, progressing, and completing a higher-degree-by-research. *Arts* is the whole story here — "Milestone reviews" (1,517w), "Candidature variations" (1,254w), "Thesis submission" / "Thesis requirements", "Course conversion" (MA↔PhD), "Manage your candidature", "Commence your candidature". Excerpts confirm these are progression-to-completion pages ("converting from a MA to a PhD and PhD to MA"), not ceremony pages.
- Honours & Dean's-list recognition** — completion-with-distinction content. *MSD* "Dean's Honours Awards 2024 / 2023" (1,924w / 1,877w) and "Dean's Honours Awards & Prizes"; *FBE* "Dean's Honours List 2024"; the cross-listed *Arts* "Bachelor of Arts (Degree with Honours)" study-site redirect. This is genuinely end-of-degree, genuinely faculty-specific.
- Graduate-research prizes, awards & travel grants** — recognition and funding tied to research completion. *FEIT* dominates: "Graduate Research Prizes", "PhD Write Up Award", "Engineering and IT Conference Travel Grant" (1,739w), "Scholarships for Graduate Researchers", Summer/Winter/Other scholarship rounds; *FBE* "Graduate researcher prizes and awards"; *FFAM* "Grants and internal funding", "Scholarships & Studentships".
- Graduate orientation & getting-started** — the bookend at the *other* end of candidature, tagged here because it's graduate-cohort content. *Arts* "Graduate Research Orientation" (appears 3× across path variants), "Graduate Research", "Graduate

coursework students"; *FEIT* "Graduate Orientation" (live + a redirect duplicate), "Building access and ID cards — Graduate Researchers", "Graduate research resources".

5. **Research-student progress & supervision** — discipline-specific candidature management. *FFAM* "Progress reviews for research students", "Graduate research seminar (Melbourne Conservatorium of Music)", "Information for research students"; *Arts* "Enriching your graduate research", "Research support", "Facilities and resources".
6. **Placement conclusion (professional degrees)** — for accredited MDHS programs, "completion" means closing out clinical placement, not a ceremony. *MDHS* "Conclusion of placement" (recurs across Social Work, Clinical Neuropsychology, MSPGH), "During placement", "Student Placements", "Chancellor's Scholars".
7. **Enrichment, mentoring & cohort programs** — graduate/UG experience content that swept into the tag. *Arts* "Arts Career Mentoring", "Melbourne Peer Mentor Program", "Peer Assisted Study Sessions", "Arts Student Ambassadors", "Job Ready Program"; *MSD* "ABP Industry Mentoring" (1,858w), "MSD Peer Mentoring", "Student Ambassador & Leadership Program".
8. **Mis-tagged course-planning / structural pages** — overlap with the course-planning topic: *MSD* double-masters "Sample Course Plans" and per-degree plans appear here too; *Arts* "Overview of course structure", "Diploma in Languages". These are tagging bleed, not graduation content.

A structural observation across all eight types: the topic is heavy with **link-farms, redirects and path-variant duplicates** (*Arts* especially — "Graduate Research Orientation" three times, `_nocache` and `plan-your-program2` mirrors, an `eStudent login` 404). The signal-to-noise is low and the genuinely-graduation content (types 1–3) is a minority of the 125.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Research-candidature milestones, thesis submission, conversion (<i>Arts</i>)	Generic graduate orientation / "getting started" (<i>Arts</i> , <i>FEIT</i>)
Dean's Honours Awards lists by year (<i>MSD</i> , <i>FBE</i>)	Re-hosted enrolment / class-registration mechanics (<i>FEIT</i> , <i>Arts</i>)
Graduate-research prizes, write-up & travel awards (<i>FEIT</i> , <i>FFAM</i>)	Path-variant & <code>_nocache</code> duplicates, redirects, link-farms
Placement-conclusion for accredited degrees (<i>MDHS</i>)	The actual <i>graduation ceremony</i> / <i>apply-to-graduate</i> spine (hub-owned; barely present here)
Discipline-specific progress reviews & supervision (<i>FFAM</i>)	Cross-tagged course-structure / sample-plan pages (<i>MSD</i> , <i>Arts</i>)

The balance tips clearly to **faculty-owned** — candidature lifecycle, honours, and research prizes are intrinsically discipline-bound. But the topic's defining feature is an *absence*: the transactional graduation spine that students most need (eligibility, apply-to-graduate, ceremony logistics, parchment/AHEGS) is a hub responsibility and is almost entirely missing from this tag, while a fog of duplicates and enrichment pages inflate the count.

Recommendation

- **Hub owns the graduation spine outright:** eligibility to graduate, apply-to-graduate in eStudent, ceremony dates/logistics, parchments and the AHEGS/testamur. This is pure transactional cross-cutting service — it belongs at `students.unimelb.edu.au` as the single source of truth, and the crawl shows faculties are *not* duplicating it (good) but also not linking to it consistently.
- **Faculties keep the discipline-bound completion content:** research-candidature milestones and thesis submission (*Arts*), Dean's Honours Awards and graduate-research prizes (*MSD*, *FEIT*, *FBE*), placement-conclusion for accredited degrees (*MDHS*), and progress reviews (*FFAM*).
- **Split the tag — it conflates two journeys.** "Graduation/completion of a coursework degree" (ceremony, parchment) and "research-candidature lifecycle" (milestones → thesis → examination) are different journeys with different owners. The single `graduation` tag hides both; retag to separate *coursework completion* from *HDR candidature*.

- **Add one hub gateway:** a "Graduating from your course" page that links out to (a) the central apply-to-graduate transaction and (b) each faculty's honours/awards and HDR-completion pages — so the end-of-degree journey is discoverable from the centre, which it currently is not.
- **Highest-value fix:** clean the Arts/FEIT noise. Roughly a third of the 125 are link-farms, redirects, or path-variant duplicates ("Graduate Research Orientation" ×3, `_nocache` mirrors, dead `eStudent login` links). Deduplicating and pruning these would shrink the topic to its real ~80 substantive pages and make the genuine completion content findable.

Topic Deep-Dive: Clubs & Events

Cross-faculty analysis from the full crawl. June 2026.

104 clubs-events-tagged pages sit across the faculty estate — a mid-sized topic, but one of the most clearly *faculty-owned* in the whole audit. Almost none of it is transactional: it's discipline-specific student community (engineering clubs, music ensembles, law mooting, design exhibitions) plus the local events, mentoring and ambassador programs faculties run themselves. The duplication is thin and concentrated in one place — the operational scaffolding around club administration (room bookings, event funding, "promote your event"), which the hub already provides centrally.

Distribution — who holds it

Unit	Pages	What dominates
FEIT	34	Discipline clubs + a full club-admin toolkit + an events calendar
Law	15	Student societies, mooting, and graduate-researcher community profiles
Architecture, Building & Planning (MSD)	15	Design clubs + the MSDx student exhibition apparatus
Fine Arts & Music	9	Conservatorium ensembles (Big Band, Symphonic, Chamber)
Arts	7	Student Ambassadors + graduate-research enrichment
Education	7	Mentoring (peer/career) + ambassador program
MDHS	7	Faculty clubs, Chat Fest, the MDHS Student Hub
Science	5	Clubs-and-societies hub page + signature events
Biomedical Sciences (school · MDHS)	5	Student societies (UG + Master's)
Total	104	

FEIT alone holds **a third** of the topic — not because it has more clubs than other faculties, but because it has documented the *administration* of clubs (committee guidance, funding, room booking, newsletter promotion) far more thoroughly than anyone else, and bolted on a multi-page events calendar.

Types of Clubs & Events content

- 1. Discipline-specific club & society directories** — the spine of the topic, and irreducibly faculty-owned. Each faculty lists the clubs tied to its disciplines: *FEIT* "Our Clubs" (Mechanical Engineering Student Society, Drone Aviation and Racing Engineering Society, Melbourne University Civil and Structural Society, Geomatics Society); *ABP/MSD* "Clubs and Societies" (Construction Students Association); *MDHS*, *Science* and *Biomedical* "Student Clubs and Societies". These name real, named student bodies a central directory could never enumerate.
- 2. Performance ensembles & participation groups** — Fine Arts & Music's entire share, and a genuinely distinct content type: not "clubs" in the social sense but credit-adjacent participation requiring audition and registration. *FFAM* "Big Band", "Symphonic Ensembles application and registration", "Chamber Music", "Percussion Ensemble". Eligibility, audition and registration mechanics make these closer to subject content than to social clubs.
- 3. Competitions & signature flagship events** — recurring, branded events that are the faculty's own. *FEIT* "FEIT Hackathon Festival" (its single largest page, 2,177w) and the "Diversity & Inclusion Case Competition" (with its own how-it-works / eligibility / prizes sub-pages); *Law* "Mooting and Competitions"; *Science* "Agriculture Discovery Week"; *MDHS* "Chat Fest". Discipline-bound by definition.
- 4. Club-administration toolkits (the operational layer)** — guidance *for running* a club: booking, money, promotion. This is where the hub-overlap concentrates. *FEIT* "Information for committee members", "Event Funding and Invoicing", "Book a room for your event", "Promote an Upcoming Event"; *ABP/MSD* "Information for clubs" (which hard-codes a `abp-`

clubs@unimelb.edu.au room-booking process). The *subject* (named clubs) is faculty-owned; the *process* (how to book a room, claim funding) is generic university machinery restated locally.

5. **Event calendars & listings** — *FEIT* runs a sprawling "FEIT Student Event Calendar" → "Upcoming events" tree, with individual scholarship-round and skills-series events tagged as "events". Notably, this calendar exists at **two parallel URL paths** (`/students/eng-and-it-calendar/...` and `/students/coursework/student-experience/orientation/.../eng-and-it-calendar/...`), so most calendar entries appear twice — a self-duplication inside a single faculty.
6. **Mentoring & ambassador programs** — student-community programs that aren't clubs but recruit students into the life of the faculty. *Education* "Peer Mentoring", "Career Mentoring", "Student Ambassador program"; *Arts* "Arts Student Ambassadors" (which appears twice, under both the undergraduate and graduate-coursework trees). Recruitment copy ("expand your network, strengthen your resume") tuned to each cohort.
7. **Graduate-researcher community** — a distinct sub-stream for HDR students, separate from coursework student life. *Law* runs an entire set of graduate-researcher profile pages (Bongkot Napaumporn, Fia Hamid-Walker, Emma Finlay, etc.) plus the "MLS Graduate Researchers Association (GRA)"; *Arts* "Enriching your graduate research"; *Science* "Events for graduate researchers". The PhD community is socially separate, and faculties model it that way.
8. **Student-life landing & enrichment hubs** — the faculty-level "front door" to all of the above. *MDHS* "MDHS Student Hub" and "Student Enrichment and Support"; *Law* "Student Life and Societies"; *Arts/Education* "Enrichment" / "Enrich your studies". These are legitimate faculty index pages, though several are thin link-farms (*Arts* "ArtsModules", "Manage your candidature" at <100w).

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Named discipline clubs & societies (FEIT, MDHS, ABP, Science, Biomedical)	Generic club-admin process — room booking, event funding, committee guidance
Conservatorium ensembles + audition/registration (FFAM)	"Promote your event" / newsletter mechanics
Flagship competitions & events — Hackathon, Chat Fest, Mooting, Ag Discovery Week	Duplicate calendar trees (FEIT's two parallel paths)
Faculty mentoring & ambassador programs (Education, Arts)	Duplicate ambassador/enrichment pages (Arts ×2, FEIT calendar entries ×2)
Graduate-researcher community & profiles (Law, Arts, Science)	Thin enrichment link-farms re-pointing to material the hub holds

The balance tilts heavily toward **legitimate faculty ownership** — the clubs, ensembles, competitions and HDR community are discipline-bound and could not live centrally. The consolidation opportunity is narrow but real: the *administrative wrapper* around clubs (book a room, claim funding, promote an event) is generic, and the self-duplication (FEIT's twin calendar paths, Arts's doubled ambassador pages) is pure noise.

Recommendation

- **Hub owns** the generic club-administration spine — one canonical "running a club: book a room, claim funding, promote an event" page set under the central student hub, plus the university-wide UMSU/club-registration entry point. Faculties link to it instead of restating the process (FEIT and ABP both currently re-document it).
- **Faculties keep** everything identity-bearing: named clubs and societies, ensembles, flagship competitions, mentoring/ambassador programs, and graduate-researcher community — this is 80%+ of the topic and is the point of a faculty student-life presence.
- **Add one hub gateway:** `students.unimelb.edu.au/your-community/faculty-clubs-and-events` — a thin directory linking out to each faculty's clubs-and-societies and student-life landing page, so discipline community is discoverable from the centre (it currently isn't).
- **Standardise the entry pattern:** every faculty exposes a single "Clubs & student life" page → (a) its named clubs/ensembles and (b) the hub's club-admin spine — consistent label and one canonical URL per faculty.

- **Highest-value fix:** kill the in-faculty duplication first — collapse FEIT's two parallel event-calendar trees into one path and de-duplicate the doubled Arts ambassador pages. It removes the largest block of redundant URLs in this topic with zero loss of unique content.

Topic Deep-Dive: Wellbeing & Health

Cross-faculty analysis from the full crawl. June 2026.

87 wellbeing-health-tagged pages sit across the faculty estate — a mid-sized topic, but a deceptive one. More than half of it (MDHS, 44 pages) is **placement-clearance and fitness-to-practice machinery** — immunisations, police/WWCC/NDIS checks, AHPRA registration — which is "health" only in the regulatory sense and is genuinely faculty-owned. The genuinely *pastoral* wellbeing content is thin, and where it exists (FEIT, Science, FBE, MBS, Law) it is a near-identical "Wellbeing + Ambassadors" landing pattern that funnels students to the same central services — the clearest consolidation candidate in the topic.

Distribution — who holds it

Unit	Pages	What dominates
Medicine, Dentistry & Health Sciences	44	Placement immunisations, screening checks, fitness-to-practice
Law	15	Wellbeing landing + special consideration/extensions + GRD profiles
Biomedical Sciences (school · MDHS)	9	Redirects to the central course/health hub (near-empty)
Engineering & IT (FEIT)	3	Pastoral "Health and Wellbeing Resources" + wellbeing series
Science	3	Pastoral "Student wellbeing" + Q-fever vaccination + an event
Architecture, Building & Planning (MSD)	3	Grievances + studio-archive false positives
Education	3	Wellbeing-and-support landing + special consideration
Arts	2	Arts West disability access (duplicated URL)
Business & Economics (FBE)	2	"Wellbeing" + "Ambassadors"
Melbourne Business School (school · FBE)	2	"Wellbeing" + "Ambassadors"
Fine Arts & Music	1	Quiet spaces at Southbank
Total	87	

MDHS alone holds **51%** of the topic — but it is not pastoral wellbeing content; it is the clinical-placement compliance estate. Strip that out and the genuine student-wellbeing footprint across the other ten units is roughly two dozen pages, most of it duplicated landing material.

Types of Wellbeing & Health content

- Placement immunisation & infection-control records** — the largest single block, all MDHS: "Hepatitis B", "Measles, Mumps and Rubella (MMR)", "Tuberculosis", "Varicella", "Pertussis", "Influenza", "COVID-19", "Hand Hygiene", "Mask Fit Testing". These are health *requirements* tied to clinical placement, with per-disease evidence rules. Faculty-owned by necessity. *MDHS only*.
- Pre-placement screening & background checks** — adjacent to the above and equally MDHS-bound: "Working with Children Check", "Australian Police Check", "Overseas Police Record", "NDIS Worker Screening Check", "CPR and First Aid", "Summary of checks", "Non-Immunisation Checks". Regulatory gatekeeping, not wellbeing support. *MDHS only*.
- Fitness-to-practice / professional-conduct health** — a discrete MDHS sub-estate: "Student Fitness to Practice", "Examples of Concerns", "MDHS Student Fitness to Practice Process", "Frequently Asked Questions", "Links and Resources". Governed by University policy (MPF1345) but operationalised at faculty level for placement-bearing courses. *MDHS only*.
- Pastoral wellbeing landing pages** — the genuine "student wellbeing" content, and the most duplicated type. Near-identical thin pages: FEIT "Health and Wellbeing Resources", Science "Student wellbeing", FBE "Wellbeing", MBS "Wellbeing", Law "Wellbeing", Education "Wellbeing and Support". Each restates the same central services (counselling, Safer Community, crisis lines). *FEIT, Science, FBE, MBS, Law, Education*.
- Wellbeing ambassador / peer programs** — a recurring twin of the landing page: FBE "Ambassadors", MBS "Ambassadors", FEIT "Wellbeing Series" and its "Student Clubs and Societies", Science "SWOT Vac Wellbeing Brunch". Peer-led activity that is

legitimately local. *FBE, MBS, FEIT, Science*.

6. **Special consideration & extensions (health-driven)** — the academic-relief side of wellbeing, all anchored to central policy MPF1326: Law "Special consideration", "Extensions", "Registration for ongoing support"; Education "Special Consideration". Faculty pages restate a centrally-owned process. *Law, Education*.
7. **Disability, equity & access support** — Law "Student Equity and Disability Support"; Arts "Arts West building disability access" (appearing twice under different URLs). A central service (Student Equity and Disability Support / SEDS) restated or localised to a building. *Law, Arts*.
8. **Quiet / wellbeing physical spaces** — facility-bound and legitimately local: FFAM "Quiet spaces at the Southbank Campus". *FFAM*.
9. **Topic noise — false positives & redirects** — worth flagging because it inflates the count: ABP studio-archive pages ("Studio 9", "Semester 2 2017 Studio 30") and MSD "Student Feedback, Complaints and Grievances"; Biomedical's nine entries are almost all `study.unimelb.edu.au` major redirects plus a 0-word "University Health Hub" stub that redirects to MDHS Contact; Law GRD researcher profiles (Grace Chaw, Lydie Schmidt) caught by the "academic-support-and-wellbeing" path. *ABP, Biomedical, Law*.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Placement immunisation/infection records (MDHS)	Pastoral "Wellbeing" landing pages (FEIT, Science, FBE, MBS, Law, Education)
Pre-placement screening & background checks (MDHS)	Restatements of special consideration / extensions (Law, Education — policy MPF1326)
Fitness-to-practice process for placement courses (MDHS)	Disability/equity support restating central SEDS (Law)
Wellbeing ambassadors & peer events (FBE, MBS, FEIT, Science)	Biomedical "University Health Hub" stub + major redirects
Quiet/wellbeing physical spaces (FFAM)	Duplicate disability-access URLs (Arts)

The balance is lopsided but in an unusual way: the **majority of pages are legitimately faculty-owned** because MDHS's compliance estate dominates the count. Among the *pastoral* wellbeing pages — the content students actually mean by "wellbeing" — almost everything overlaps the hub: six faculties each maintain a thin landing page pointing at the same central counselling, crisis and Safer Community services.

Recommendation

- **Hub owns the pastoral spine:** counselling, crisis/Safer Community, Student Equity & Disability Support, mental-health resources, and the special-consideration/extensions process (already governed centrally by MPF1326) live once on `students.unimelb.edu.au` as the single source of truth.
- **Faculties keep two things only:** (a) peer/ambassador activity and local wellbeing events (FBE, MBS, FEIT, Science), and (b) physical spaces (FFAM quiet spaces, Arts West access) — these are genuinely local and cannot be centralised.
- **MDHS retains its compliance estate entirely** — immunisations, screening checks, fitness-to-practice — but it should be **re-tagged out of "wellbeing"** into a placement/clinical-compliance topic; lumping AHPRA and Hepatitis-B evidence rules under "wellbeing" mis-describes 44 of the 87 pages.
- **Add one hub gateway** — `students.unimelb.edu.au/health-and-wellbeing` as the canonical entry — and reduce each faculty "Wellbeing" landing page to a thin signpost (local events + a link to the hub), rather than re-stating central services.
- **Single highest-value fix:** collapse the six near-duplicate pastoral "Wellbeing" landing pages into links to one authoritative hub page, and kill the dead Biomedical "University Health Hub" stub. This removes the topic's only real duplication while leaving every genuinely faculty-owned page (the MDHS compliance estate, peer programs, physical spaces) untouched.

Topic Deep-Dive: Inclusion & Equity

Cross-faculty analysis from the full crawl. June 2026.

49 inclusion-equity-tagged pages sit across the faculty estate — one of the *smallest* topics in the audit, and the headline finding is that the tag is heavily inflated by false positives. Genuine inclusion/equity content (Indigenous student support, disability/equity support, diversity programs) numbers barely a dozen pages and is **faculty-owned but thin**; the rest is keyword-match noise — Law's GRD student bio pages and MSD's design-studio archives that happen to mention "community," "Indigenous" or "housing." The real equity *spine* (the central Student Equity & Disability Support service) lives at the hub, and faculties hold only discipline-flavoured satellites around it.

Distribution — who holds it

Unit	Pages	What dominates
Law	15	GRD student-profile bios (false positives) + 4 equity/disability clinics
ABP/MSD	11	Design-studio archive pages (all false positives)
MDHS	8	Placement NDIS/fitness-to-practice checks + 1 Indigenous success page
FEIT	6	One Diversity & Inclusion Case Competition (5 pages) + Indigenous experience
Arts	6	Arts West disability access (duplicated) + enrichment/employability
Science	1	Current Indigenous students
FFAM	1	Practical-music timetable (link-farm false positive)
MBS (school)	1	Master of Indigenous Business Leadership
Total	49	

Law and ABP together hold **53%** of the tag, but almost none of it is real: Law's 15 are mostly graduate-researcher bios (Aashish Yadav, Ishika Chatterjee...), and all 11 ABP pages are studio archives. Strip the noise and only **~13 pages** are genuinely about inclusion or equity.

Types of Inclusion & Equity content

- Indigenous student support & success** — the single most legitimate category, and it appears once per faculty rather than once centrally. *Science* "Current Indigenous students" (1,161w, opens with a Country acknowledgement); *MDHS* "MDHS Indigenous Student Success" ("Wominjeka!..."); *FEIT* "Indigenous Student Experience"; *MBS* "Master of Indigenous Business Leadership." Each is bespoke to its discipline — none links to a common hub anchor.
- Disability & equity support (faculty front-doors to a central service)** — *Law* "Student Equity and Disability Support" (names the Associate Dean (Diversity & Inclusion) and Equal Opportunity Liaison Officers); *Arts* "Arts West building disability access." These are local restatements/entry points to what is centrally the Student Equity and Disability Support (SEDS) function.
- Physical-access / building accessibility** — a genuinely faculty-owned slice because buildings are local. *Arts* "Arts West building disability access" ("Getting into Arts West... the pathway") — and it appears **twice** (two URLs, same content), the only true intra-faculty duplicate in the topic.
- Equity-themed clinical & experiential subjects** — discipline-specific curriculum, not a service. *Law* MLS clinics: "Disability Human Rights Clinic" + "DHRC Research Outcomes," "Indigenous Legal Advocacy Clinic," "Stateless Legal Clinic" ("Citizenship to me means protection and certainty for my children..."). Legitimately Law-only.
- Diversity & inclusion co-curricular programs** — *FEIT*'s "Diversity & Inclusion Case Competition" spread across 5 thin pages (landing / How Does It Work / Eligibility / Prizes), the classic one-event-fragmented-into-many-pages pattern.

6. **Compliance "equity" (mis-tagged)** — *MDHS* placement pages — "NDIS Worker Screening Check," "student-fitness-to-practice / Examples of Concerns," "Handbook," "Key Contacts" — tagged on "NDIS"/"disability" keywords but are really placement-compliance content belonging to the placements topic.
7. **Keyword-match noise (not inclusion content at all)** — *Law* GRD researcher bios (11 pages); *ABP/MSD* studio archives ("Studio H: Housing," "Bower Studio," "Five Mile Creek"); *FFAM* practical-music timetable link-farm. ~22 pages — nearly half the tag — are false positives.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Building accessibility (Arts West access)	Generic "student equity & disability support" framing (Law's page restates the central SEDS service)
Equity-themed clinics/subjects (Law DHRC, Indigenous Advocacy, Stateless)	Indigenous-student-support landing pages (4 near-identical faculty versions of one hub concept)
Discipline-specific Indigenous programs (MBS Indigenous Business Leadership)	"Diversity & inclusion" general statements
Faculty-run D&I events (FEIT case competition)	MDHS placement-compliance pages (belong to <i>placements</i> , not equity)

The balance tips the other way from most topics: outside the clinics and building-access pages, very little here is irreducibly faculty-specific. The Indigenous-support and equity/disability-support pages are **parallel reinventions of a central service**, and ~45% of the tag is noise — so the consolidation opportunity is unusually large relative to the page count.

Recommendation

- **Hub owns** the inclusion/equity spine: one authoritative Student Equity & Disability Support page and one Indigenous student support hub (Murrup Barak), as the single source of truth. Faculties should link to these, not paraphrase them.
- **Faculties keep** only the irreducibly local: building accessibility (Arts West), equity-themed *subjects/clinics* (Law), faculty-run D&I events (FEIT), and discipline-specific Indigenous programs (MBS) — content that is curriculum or place, not service.
- **Add one hub gateway:** `students.unimelb.edu.au/.../equity-and-inclusion` listing each faculty's Indigenous-support contact and equity liaison, so a student starting at the centre can reach their faculty's named officer (Law's Equal Opportunity Liaison model is the pattern to surface).
- **Fix the tag, not just the IA:** ~22 of 49 pages are false positives (GRD bios, MSD studios, music timetable) and the MDHS placement pages belong to *placements* — re-tagging is the highest-value, lowest-cost fix and would shrink the topic to its real ~13-page footprint.
- **Single highest-value fix:** consolidate the four faculty "Indigenous student" pages behind one hub Indigenous-support anchor with faculty-specific contact blocks — it removes the most duplication and gives Indigenous students one reliable front door instead of four discoverable-by-luck ones.

Topic Deep-Dive: Academic Skills

Cross-faculty analysis from the full crawl. June 2026.

37 academic-skills-tagged pages sit across the faculty estate — a small topic, well down the table, but a revealing one. The pattern is *split and thin*: the genuinely discipline-bound material (legal research, academic English for science, thesis writing) is legitimate faculty content, but the rest is a scatter of near-identical "Academic Skills" landing pages, peer-mentoring re-runs and link-farm stubs — most of which restate or point at a service the central hub (Academic Skills / Stop 1) already owns. Law alone holds 11 of the 37, almost entirely its own Ian Malkin Centre micro-site.

Distribution — who holds it

Unit	Pages	What dominates
Law	11	Ian Malkin Centre for Legal Academic Skills + legal research/writing
ABP/MSD	5	Studio archive + student-experience pages (loosely tagged)
Engineering & IT (FEIT)	4	Generic "Academic Skills" + study resources + thesis writing
Education	4	Academic Skills module + peer mentoring
Arts	3	Peer mentoring / PASS / academic mentoring
Science	3	"Build your academic skills" + academic English tutorials
Business & Economics (FBE)	2	Academic Success + quantitative requirement
Fine Arts & Music (FFAM)	2	Research-student ethics/integrity + student services
Biomedical Sciences (school · MDHS)	2	Two parallel "Academic Skills" pages (UG + master's)
Medicine, Dentistry & Health Sciences	1	Placement-bound skills page
Total	37	

Law holds **30%** of the topic single-handed — but unlike the program-driven volume elsewhere in the audit, that bulk is a self-contained legal-skills centre (the Ian Malkin Centre) rather than per-degree pages. Most other faculties carry only 2–4 pages, several of them generic restatements of the same idea.

Types of Academic Skills content

- 1. Discipline-specific academic-skills centres / programs** — the legitimate, irreducible core. *Law*'s "Ian Malkin Centre for Legal Academic Skills" with "Early Academic Guidance for Legal Education", the "Legal Academic Skills LMS Community", "Writing for law" and "About the Centre and facilities"; this is a named teaching service with its own staff and LMS, not generic advice.
- 2. Discipline-specific writing & research skills** — skills taught *through* the discipline. *Law* "Legal Research" (5,424w — by far the deepest page in the topic) and "Student Achievement and Grading"; *FEIT* "Thesis writing events"; *FFAM* "Research Ethics & Integrity". These can't be centralised because the worked examples are the discipline.
- 3. Academic English / language support tutorials** — for cohorts with EAL needs, tuned to the discipline's register. *Science* "Science Academic English Tutorials"; *FEIT*'s orientation-stream "Academic Skills" page (filed under "improve your English, communication and academic skills").
- 4. Peer mentoring / peer-assisted study (PASS)** — a recurring, near-identical pattern across faculties. *Arts* "Melbourne Peer Mentor Program", "Peer Assisted Study Sessions", "Academic Mentoring"; *Education* "Peer Mentoring". Same model, separately documented per faculty.
- 5. Generic "Academic Skills" / "Academic Success" landing pages** — the clearest duplication signal. The literal page title "Academic Skills" recurs at *FEIT* (twice), *Biomedical* (twice — one for the bachelor, one for the master's), and *Education* ("Academic Skills module"); *FBE* runs the same idea as "Academic Success". These are thin restatements of the central service.

6. **Discipline numeracy / quantitative requirements** — degree-specific skill gates. *FBE* "Compulsory Quantitative Requirement"; *Education* "Assessment, Results and Academic Integrity". Legitimately faculty-owned where tied to a program rule.
7. **"Enrich your studies" enrichment hubs** — faculty wrappers that bundle skills, mentoring and language under one parent. *Science* and *Education* both run an "Enrich your studies" page; *Arts* nests its skills content under "enrich-your-bachelor-of-arts". A consistent shape, inconsistently located.
8. **Loosely-tagged / mis-filed pages** — topic noise. *ABP/MSD*'s five pages are studio archives (2014–2017) and a "Student Experience" page; *MDHS* "During Placement"; *FFAM* "Student Services". These surface under the tag without being academic-skills content in any useful sense.
9. **Link-farm gateways** — sub-100-word stubs that only route onward. *Law* "Academic skills resources" (69w), "Writing for law" (109w), "Academic Support and Wellbeing" (19w) and the Ian Malkin Centre index (149w). Navigational scaffolding, not content.

Legitimate vs hub-overlapping

Faculty-owned (cannot be centralised)	Overlaps the hub (consolidation candidate)
Ian Malkin Centre for Legal Academic Skills (Law)	Generic "Academic Skills" landing pages (FEIT ×2, Biomedical ×2, Education)
Legal Research; legal writing & grading (Law)	"Academic Success" as a generic restatement (FBE)
Discipline academic-English tutorials (Science, FEIT)	Peer-mentoring / PASS descriptions (Arts, Education) — same model, repeated
Thesis-writing events; research integrity (FEIT, FFAM)	Link-farm stubs pointing at the central service (Law)
Compulsory Quantitative Requirement (FBE)	Mis-tagged studio archives / placement pages (ABP, MDHS, FFAM)

The balance tips toward **hub-overlap** here, unlike most topics in the audit. Only Law's Malkin Centre and a handful of discipline-language/research pages are genuinely irreducible; the larger share is duplicated landing pages, repeated peer-mentoring write-ups and stubs that exist mainly because each faculty felt it needed an "Academic Skills" entry of its own.

Recommendation

- **Hub owns the canonical service:** the central Academic Skills offering (workshops, drop-ins, the academic-skills site) is a textbook cross-cutting service — it should be the single source of truth for generic study-skills, academic-writing and time-management content. Faculties should link to it, not re-describe it.
- **Faculties keep the discipline-bound layer:** Law's Ian Malkin Centre, legal research/writing, discipline-specific academic-English tutorials (Science, FEIT), thesis-writing and research-integrity sessions, and program-tied numeracy requirements (FBE) — all stay where the worked examples live.
- **Consolidate the generic "Academic Skills" pages:** collapse the five-plus near-identical landing pages (FEIT ×2, Biomedical ×2, Education, FBE "Academic Success") into a single linked reference to the hub; retire the link-farm stubs in Law.
- **Standardise peer mentoring / PASS:** treat peer-assisted study as one university program with a hub page; faculties add only their local session times and contacts, not a fresh description each.
- **Highest-value fix:** publish one hub gateway — `students.unimelb.edu.au/academic-skills/by-faculty` — that owns generic skills content and links out to each faculty's *genuinely discipline-specific* skills service (Malkin Centre, Science academic English, etc.). That single page would absorb the duplicated landings and make the legitimate faculty content discoverable from the centre, where it currently isn't.
