Student services — fragmentation deep-dive

How each current-student service is scattered across the 20-domain estate,
and the consolidation map. June 2026.

University of Melbourne • June 2026

The University of Melbourne acknowledges the Traditional Owners of the unceded land on which we work, learn and live, and pays respect to their Elders, past and present, and to Indigenous Australians today.

How each current-student service is spread across the University's 20-domain public web estate, traced through the path-level link graph (21,250 pages). One profile per service: its true footprint, canonical owner, the seams a student hits, the duplication, and the consolidation action. June 2026.

Executive summary

Read service-by-service, the estate's fragmentation has a consistent shape. For most services the **central hub students.unimelb.edu.au is the right owner and is reached** — the problem is rarely "no front door." The problem is what happens **downstream of the front door**: the hub duplicates itself across parallel URL trees, the actual service delivery sits on a *different* host (often branded as something else, or behind login, or off the crawled estate entirely), and every faculty re-hosts its own copy rather than linking the centre. A student looking for one service routes through **three or four hosts with inconsistent labels** to reach the thing they need — and sometimes the most authoritative version is a draft, a deprecated tree, or a prospective-marketing page.

Six structural patterns recur across the services below. They are not fourteen separate problems; they are **six systemic faults expressed fourteen times** — which is what makes them fixable as patterns, not page-by-page.

The six recurring fragmentation patterns

1. The hub duplicates itself — parallel URL trees mid-migration. Almost every service that the hub owns is served under two or three live URL roots at once — /support-and-wellbeing vs legacy /student-support (wellbeing, equity, international, contacts), /course-admin vs /your-course vs /admin (fees, enrolment, graduation, exams). The legacy tree usually carries rel=canonical to the new one yet stays live and internally linked, so the same content competes with itself for inbound links and search rank. *Affects: wellbeing, equity, fees, international, enrolment, graduation, exams, contacts.*

2. The canonical owner exists but is barely reached — or doesn't exist at all. Scholarships has a dedicated 2,124-page scholarships.unimelb but the hub links it ~37×; Student IT's real home studentit.unimelb and HDR's gradresearch.unimelb sit **outside the student estate entirely**; placements/WIL has **no central owner at all** (zero WIL front door on the hub). The owner is an afterthought, off-estate, or absent. *Affects: scholarships, IT, HDR, careers, placements.*

3. The action lives behind login; the public estate only describes it. The thing a student actually does — pay fees, enrol in a subject, book a counselling appointment, apply to graduate, log an IT ticket, RSVP a careers event — happens in my.unimelb, Canvas, ServiceNow or a *.app form, all behind auth and uncrawlable. The public pages narrate the service and link to a login wall, so the find→act seam is invisible from the outside and unverifiable. *Affects: IT, careers, enrolment, graduation, fees, wellbeing.*

4. Delivery sits on a shared or off-brand host. Counselling and the Health Service live on services.unimelb, a multi-service host that is described as "Academic Skills Unit" (614×) and "DELA" (613×) far more than "Counselling" (39×) — so a wellbeing link lands on a page branded as something else. Safer Community and campus safety are separate sites again. The student crosses a host boundary onto an unfamiliar brand mid-task. *Affects: wellbeing, academic skills, safety.*

5. The reverse-funnel — prospective owns the content the enrolled student needs. Fees content is 363 pages on the prospective study.unimelb vs ~17 on the hub; careers' single biggest owner is study.unimelb (440 pages); scholarships' discovery engine is prospective-facing. Enrolled students are bounced *back up the funnel* to marketing pages for answers they need now. *Affects: fees, careers, scholarships.*

6. Faculty re-invention and byte-identical clones. Faculties re-host the central service rather than link it — and often verbatim: 5 Jaccard-1.0 wellbeing clones and the entire HDR candidature lifecycle duplicated byte-for-byte across Education and MDHS; the BCom careers tree double-hosted by FBE and MBS; placements scattered across 8 faculty silos under 4 different names; student-life across 12+ faculty silos. The same content is maintained N times and drifts out of sync. *Affects: HDR, wellbeing, placements, student-life, careers, equity.*

Fragmentation league table

Services ranked by spread (domains × URL trees). Raw page counts include keyword false positives (filtered in each profile); the spread itself is the fragmentation signal.

Service	Raw pages	Domains	URL trees	Central hub	Top owner	Spread score
wellbeing, health & safety	2588	19	115	170	medicine (1073)	2185
scholarships & awards	2798	17	102	37	scholarships (2124)	1734

Per-service deep-dives

wellbeing, health & safety [HIGH]

The central front door exists and is reached (students.unimelb/support-and-wellbeing), but the service is shattered downstream: two parallel trees on the hub itself, the actual counselling/health services live on a separate shared host, and safer-community/safety sit on their own uncrawled domains — so a student routes through 3-4 hosts with inconsistent labels to reach help.

Spread: 19 domains · 115 URL trees · central-hub pages 170 · top owner medicine (1073). **True footprint.** Raw classifier tagged 2,588 pages across 19 domains; filtered TRUE current-student footprint is ~335 rows / ~244 unique query-stripped paths. Filtered OUT: 1,488 medical-school false positives (medicine.unimelb 1,073 = /school-structure/medical-education, surgery, paediatrics, research-groups; mdhs 211 + biomedicalsciences 204 = research/org/news/dept pages, keyword 'health'), and 428 study.unimelb prospective pages (379 = /find/courses catalogue). True footprint = hub 167 (students.unimelb /support-and-wellbeing + legacy /student-support) + delivery 127 (services.unimelb /counsel ~100, /health ~20) + ~41 genuine per-faculty current-student wellbeing stubs (education, law, science, fbe, eng, biomed graduate-research). **Canonical owner.** Canonical owner is students.unimelb.edu.au — and unlike most services it IS reached. The genuine front door /support-and-wellbeing (title 'Support and wellbeing | Current students') fans out to all the real providers. But the hub only ROUTES; it owns none of the actual service delivery, which lives on services.unimelb (counsel/health) and on separate uncrawled domains (safercommunity.unimelb, safety.unimelb) plus the authenticated core (my.unimelb appointments). Ownership is split front-door-vs-delivery, and even the front door is duplicated under two URL roots.

Where it lives

Location	Role	Note
students.unimelb.edu.au/support-and-wellbeing (152 raw / 109 unique paths)	Genuine central front door / router	Title 'Support and wellbeing Current students'. Fans out to services.unimelb (counsel/health), safercommunity, safety, housing, murrupbarak, scholarships. This is the canonical owner and it works as a directory — but holds little service content itself.
students.unimelb.edu.au/student-support (12 raw / 10 unique paths)	Legacy PARALLEL tree (duplicate of the front door)	Same H1 'Support and wellbeing', carries rel=canonical -> /support-and-wellbeing, yet stays live and internally linked. Shares 6 identical leaf paths with the live tree (health-and-wellbeing, faith-and-spirituality, university-health-promotion-program, health-promotion-grants, vape-free-campus).
services.unimelb.edu.au/counsel (~100 pages) and /health (~20 pages)	Actual service DELIVERY site (off the hub)	Counselling & Psychological Services + University Health Service. Public (no login wall), hosts real crisis/mental-health content (/counsel/emergency-and-crisis-support). But sits on a SHARED multi-service host also bundling Academic Skills Unit, DELA, Student Financial Aid — so it is not a wellbeing-branded destination.
safercommunity.unimelb.edu.au + safety.unimelb.edu.au (separate domains, NOT in the 20-domain content crawl)	Safer Community Program + campus safety — the 'safety' half of the service	Hub links out 62x to safercommunity, plus links to safety.unimelb and safezoneapp.com/SafeZone. These live entirely off the hub on their own sites; the real safer-community action is one more hop away and uncrawled.
my.unimelb / Canvas (behind login, uncrawled)	Where appointments/case management actually happen	Booking a counselling/health appointment and ongoing case support sit behind auth; the public estate only describes the service and links to the login wall.
education.unimelb & mdhs.unimelb graduate-research/current-students/student-support-services (+ eng/law/science/fbe/biomed /students/.../wellbeing)	Per-faculty PARALLEL wellbeing trees	5 jaccard=1.0 EXACT clones (counselling, safer-community-program, housing-support, student-services-directory, library) duplicated verbatim across education & mdhs HDR trees. Each faculty re-hosts its own wellbeing stub instead of linking the hub.

The seams a student hits

- Front-door duplication: the hub serves the SAME service under two roots — /support-and-wellbeing (live) and /student-support (legacy, rel=canonical but still crawlable and linked) — sharing 6 identical leaf paths.
- Front-door-to-delivery hop crosses hosts: the advice ('get counselling') lives on students.unimelb but the service lives on services.unimelb/counsel — a domain switch (290 hub->services contextual links) onto a host that mixes 5 unrelated services.
- Label inconsistency at the delivery host: services.unimelb is described as 'Academic Skills Unit' (614), 'DELA' (613), 'Student Financial Aid' (125) FAR more than 'Counselling and Psychological Services' (39+21) or 'Health Service' (18) — a student following a wellbeing link lands on a host branded as something else.
- Safety split onto an off-estate domain: the Safer Community Program is a separate site (safercommunity.unimelb, 62 hub links) with inconsistent anchors ('Safer Community Program', 'Speak Safely Portal', 'The Safer Community Program', 'Bullying') — the safety half of 'wellbeing, health & safety' is one extra hop away and not in the crawled estate.
- Faculty detours: 6 faculties (education, mdhs, eng, law, science, fbe) each host their own wellbeing/student-support page rather than deep-linking the central hub, so an HDR or faculty student may never reach students.unimelb at all.
- Dead ends in the delivery path: dead-pages.csv shows broken counsel links (services.unimelb/counsel/about/meet-our-counsellors, /counsel/resources/mental-health-problems, /counsel/404) and broken legacy hub links (/student-support/student-equity-and-disability-support/..., /support-and-wellbeing/stop-1/categories/more-services) — students hit 404s mid-help-seeking.

Duplication

- TWO parallel wellbeing trees on the hub itself: /support-and-wellbeing (109 paths) and legacy /student-support (10 paths) share 6 identical leaf paths; legacy page is rel=canonical to the live one yet remains live and linked.
- 5 EXACT (jaccard=1.0) clones of HDR student-support pages across education.unimelb and mdhs.unimelb: counselling, safer-community-program, housing-support, student-services-directory, library — byte-for-byte identical (1341/693/767/2073 words).
- Per-faculty wellbeing stubs duplicating the central offer: eng /students/coursework/study-resources/wellbeing, law /students/academic-support-and-wellbeing, science /students/student-life/wellbeing, fbe /students/wellbeing, biomedicalsciences /study/current-student-information.
- OSHC (Overseas Student Health Cover) authored repeatedly: /course-admin/study-overseas/.../health-and-wellbeing, /sandbox/2026-uplifts/student-visas/...oshc, /student-support/international-student-support/visas/...oshc, /support-and-wellbeing/international-student-support/visas/...oshc — same content under 4 path variants on the hub.
- University Health Promotion Program tree fully duplicated under BOTH hub roots (/student-support/health-and-wellbeing/university-health-promotion-program/* and /support-and-wellbeing/health-and-wellbeing/university-health-promotion-program/*), including health-promotion-grants, safer-sex, vape-free-campus.

Consolidation action. Make students.unimelb.edu.au/support-and-wellbeing the single, enforced front door and collapse everything else into it. (1) Retire the legacy /student-support tree — 301-redirect all 10 paths to their /support-and-wellbeing equivalents (the rel=canonical already declares intent) so only one hub tree remains. (2) Re-brand or sub-path the delivery host: surface Counselling & Psychological Services and the Health Service under a wellbeing-branded entry (or move them under students.unimelb/support-and-wellbeing/...) so students don't cross onto services.unimelb where the dominant labels are Academic Skills/DELA/Financial Aid; fix the broken /counsel/* links. (3) Pull the safer-community/safety content into the hub's safety-and-security node with ONE consistent label, deep-linking safercommunity.unimelb rather than scattering 'Speak Safely Portal'/'Safer Community Program' variants. (4) Replace the 5 exact HDR clones and the 6 faculty wellbeing stubs with transcluded links to the central hub, deleting the duplicate authored copies. (5) Consolidate the 4 OSHC variants and the doubled Health Promotion Program subtree to single canonical URLs. Net: one front door, one delivery brand, one safety entry — eliminating the host-hopping and label whiplash a distressed student currently faces.

scholarships & awards [HIGH]

Scholarships is split three ways — a prospective-facing "Find a scholarship" search engine (scholarships.unimelb), a dozen faculty-authored scholarship trees, and a fractured current-students hub section — with no single owner of the current-student "manage my scholarship" experience and the catalogue barely reached from the hub.

Spread: 17 domains · 102 URL trees · central-hub pages 37 · top owner scholarships (2124). **True footprint.** Raw classifier: 2,798 pages across 17 domains. TRUE current-student footprint ≈ 470–490 pages. Filtering: (1) Removed faceted-search URL bloat — 2,063 of 2,798 pages (74%) are Funnelback search-result permutations (/search?collection=...api-m1-scholarships...&start_rank=N&f.Area+of+study=...&query=...); scholarships.unimelb alone is 2,124 pages of which 2,037 are search bloat, leaving only 87 real content pages (~82 /awards/ pages + home/guide/faq). (2) Removed clinical/research false-positives — medicine.unimelb's 141 hits are research-group pages, newsletters, staff bios and "award winner" lists (e.g. /school-structure/general-practice-and-primary-care/newsletter/...), NOT a student scholarship service; keyword matched stray "award"/"scholarship". Genuine remainder: scholarships.unimelb 87 + students.unimelb 37 + faculty genuine-static scholarship trees ≈ 340 (eng 83, arts 62, finearts-music 36, fbe 33, mdhs 26, law 21, biomedicalsciences 21, education 20, science 12, others) + ~3 current-relevant study.unimelb pages. **Canonical owner.** scholarships.unimelb.edu.au is the dedicated central site and de jure canonical owner, but it is reached as an afterthought from the current-students estate. The current-students hub (students.unimelb) sends only 28 contextual links into it, versus 411 from study.unimelb (prospective/marketing) and 325 from medicine — i.e. the prospective funnel and a faculty out-link to it 14× and 11× more than the student hub does. Worse, scholarships.unimelb is itself prospective-shaped: its home page is titled "Find a scholarship" and 96% of it is an applicant-facing faceted search, so even when reached it does not own the current-student "manage your scholarship / payment dates / conditions" job — that lives back in students.unimelb. There is no single owner of the end-to-end current-student scholarship experience.

Where it lives

Location	Role	Note
scholarships.unimelb.edu.au (2,124 raw / ~87 real)	De jure canonical central catalogue + applicant search	96% is faceted-search bloat (2,037 /search? URLs over the Funnelback collection api-m1-scholarships). Real content = ~82 /awards/ pages + /guide + /faq + home. Home is a hub (275 inbound) but titled 'Find a scholarship' — prospective-facing. Out-links lean prospective: study.unimelb 74, go.unimelb 44, futurestudents 38; only students.unimelb 16, gradresearch 17.
students.unimelb.edu.au (37 pages)	De facto current-student owner of 'manage your scholarship' — but fractured	Holds the genuinely current-student jobs (about-your-scholarship, payment-dates, coursework/mobility/travelling scholarship conditions, financial-aid, Australia Awards, international loan programs). BUT the same content is duplicated across 3+ parallel path trees from an un-finished IA migration: /support-and-wellbeing/manage-your-scholarship, /student-support/scholarships-and-financial-support/manage-your-scholarship, and /your-course/course-admin/.../evidence-of-scholarship. Plus an unrelated 'grants' world under /careers/.../fund-your-idea.
Faculty scholarship trees (~340 pages, 12 faculties)	Parallel faculty-authored scholarship/prize/award listings	Real, maintained content: eng /students/scholarships-prizes-and-awards (83), arts /scholarships (62), finearts-music /study-with-us (36), fbe /scholarships (33), mdhs (26), law (21), biomed (21), education (20), science (12). Each duplicates the central catalogue for its discipline. msd, mbs and law additionally embed their OWN faceted-search instances over the SAME Funnelback index (collection api-m1-scholarships: msd 13, law 8, mbs 6 search URLs) — the search is copied, not shared.
study.unimelb.edu.au (14 pages)	Prospective/marketing scholarship content (mostly out of scope)	Access Melbourne scholarships, Narm Scholarship Program, Hansen Program, accommodation bursaries, 'meet our scholars' stories. Applicant-facing; only ~3 pages touch current students. This is the single biggest linker INTO the canonical site (411 contextual links) — the catalogue is wired to the prospective funnel, not the student hub.
gradresearch.unimelb.edu.au (HDR) + my.unimelb (behind login)	HDR scholarship owner + where the real transactional action sits	Research Training Program / Melbourne Research Scholarship are HDR-owned; faculties link to gradresearch heavily (education 1,972, mdhs 1,882) and scholarships.unimelb 17×, so RTP/MRS ownership is split between scholarships.unimelb /awards and gradresearch. The actual 'accept offer / view payments / manage my scholarship' transactions live in my.unimelb /SIS behind auth (uncrawled) — scholarships.unimelb out-links to sis.unimelb and forms.your.unimelb only 1× and 4×.

The seams a student hits

- Hub → canonical catalogue is a near-broken seam: [students.unimelb](https://students.unimelb.edu.au) (current-students hub) → [scholarships.unimelb](https://scholarships.unimelb.edu.au) is only 28 contextual links, vs [study.unimelb](https://study.unimelb.edu.au) → [scholarships.unimelb](https://scholarships.unimelb.edu.au) 411. A current student on the hub is ~15× less likely to be routed to the central catalogue than a prospective applicant on [study.unimelb](https://study.unimelb.edu.au).
- Catalogue → hub return path is thin: [scholarships.unimelb](https://scholarships.unimelb.edu.au) → [students.unimelb](https://students.unimelb.edu.au) only 16 links. Once a student lands in the applicant-shaped search, almost nothing routes them back to the current-student 'manage your scholarship' pages where their actual job lives.
- Catalogue → transactional core is effectively absent: [scholarships.unimelb](https://scholarships.unimelb.edu.au) → [sis.unimelb](https://sis.unimelb.edu.au) 1, → [forms.your.unimelb](https://forms.your.unimelb.edu.au) 4, → [services.unimelb](https://services.unimelb.edu.au) 5. The site that lists awards barely connects to where you accept/manage one ([my.unimelb](https://my.unimelb.edu.au)/SIS behind login).
- Faculty → central is one-way and uneven: faculties link INTO [scholarships.unimelb](https://scholarships.unimelb.edu.au) (medicine 325, finearts-music 221, education 150, eng 129) but the central site links back to faculties almost never (arts 1, mdhs 1) — students get funnelled up but not laterally across the discipline trees.
- HDR scholarships straddle two owners: RTP/MRS appear both on [scholarships.unimelb](https://scholarships.unimelb.edu.au)/awards and on [gradresearch.unimelb](https://gradresearch.unimelb.edu.au), with faculties linking to gradresearch far more than to [scholarships.unimelb](https://scholarships.unimelb.edu.au) — an HDR student must reconcile two central sources.

- Dead/login-walled links inside faculty scholarship trees: arts.unimelb /scholarships/graduate-research and /scholarships/school/* return 404 (4 dead pages), eng has 2 dead Johansen-scholarship URLs, and finearts-music's Majlis Travelling Scholarship page is an orphan behind Sign-In.

Duplication

- Catalogue duplicated across estate: ~82 central /awards/ pages are paralleled by ~340 faculty-authored scholarship/prize pages — the same awards re-listed per discipline (eng 83, arts 62, finearts-music 36, fbe 33, etc.) with no canonical cross-reference.
- The faceted SEARCH itself is duplicated, not shared: the Funnelback collection 'api-m1-scholarships' is re-embedded as separate search-result URL spaces on scholarships.unimelb (2,037), msd (13), law (8) and mbs (6) — 2,063 near-identical search-permutation pages estate-wide instead of one canonical search.
- Current-student 'manage your scholarship' content forked into 3+ parallel URL trees inside students.unimelb (/support-and-wellbeing/manage-your-scholarship, /student-support/scholarships-and-financial-support/manage-your-scholarship, /your-course/course-admin/...evidence-of-scholarship) — same payment-dates / conditions content at multiple live paths from an unfinished IA migration.
- HDR scholarship pages (RTP, Melbourne Research Scholarship) duplicated between scholarships.unimelb/awards and gradresearch.unimelb.
- Anchor-text inconsistency for the SAME destination: scholarships.unimelb is labelled 'Search for scholarships' (111), 'Find a scholarship' (19+22), 'Scholarships' (19), 'Find out' (16), 'Discover more about Melbourne' (22), 'Contact us' (15) — no consistent name, so the canonical owner has no stable identity in navigation.

Consolidation action. Split the service cleanly into DISCOVER vs MANAGE and give each one owner. (1) Make scholarships.unimelb the single canonical DISCOVER catalogue: collapse the 2,063 faceted-search permutations to one canonical /search (canonicalise/noindex the start_rank & facet URLs), retire the msd/law/mbs duplicate search instances and point them at the central index, and convert faculty scholarship trees from re-authored listings into thin discipline-filtered views of the central catalogue. (2) Make students.unimelb the single canonical MANAGE owner: consolidate the 3 parallel 'manage-your-scholarship' path trees into one, and raise the hub→catalogue link density from 28 toward parity with study.unimelb's 411 (add 'Find a scholarship' entry points wherever a current student lands). (3) Wire the catalogue to the transactional core — every /awards page should deep-link to the my.unimelb/SIS accept-and-manage flow. (4) Standardise the anchor label to 'Find a scholarship' everywhere. (5) Fix the dead arts/eng scholarship URLs and the login-walled finearts orphan. This removes ~2,000 bloat pages, halves the genuine page count via faculty de-duplication, and gives a student one place to find an award and one place to manage it.

IT, systems & tools [HIGH]

The student IT service barely exists as crawlable content — the real owner (studentit.unimelb.edu.au) plus every actual system (my.unimelb, the LMS/Canvas, accounts, wifi, ServiceNow) sits OUTSIDE the 20 crawled domains, so the public estate is just a thin, inconsistent scatter of launchpad links pointing off into authenticated/separate sites.

Spread: 17 domains · 82 URL trees · central-hub pages 1 · top owner eng (193). **True footprint.** Raw classifier count: 462 pages across 17 domains. This is ~95%+ false positives. The dominant "owners" are eng.unimelb.edu.au (193) and study.unimelb.edu.au (68) — but eng is the "Faculty of Engineering and Information Technology", so its 193 hits are research news/"ingenium" magazine/defence-tech articles caught purely because "Information Technology" + "technology"/"IT" are in the faculty name and prose (e.g. "Is it OK to leave chargers plugged in", "shadow IT", defence sensor systems). study.unimelb's 68 are the PROSPECTIVE course catalogue (Master of IT, Computer Science degrees). law (35) is "technology & the law" academic content + COVID news. I filtered by dropping study.unimelb (prospective), handbook/www, and faculty research/news/about/study pages, keeping only pages whose URL carries a genuine student-IT token (/lms, canvas, eduroam, wifi, password, student-it, software, microsoft-365) AND sits in a student section. That generous filter yields 22 pages — but on inspection most are STILL false ("Australian Canvas" music events, wifi-IoT white paper, msd/BELT "canvas" pages that are STAFF teaching-prep). The TRUE current-student IT footprint on the crawled estate is roughly 10-15 thin pages: eng.unimelb's 3 orientation "student-it" pages, law's "LMS Community", students.unimelb's single "LMS Classic Quiz user guide" + a stray "Microsoft 365 apps" news item, and a few faculty exam laptop-prep pages — and nearly every one of these is just a redirect to off-estate systems. **Canonical owner.** The true canonical owner is studentit.unimelb.edu.au (Student IT) — branded, consistently

named, with real sub-pages (/software, /mfa, /uniwireless, /support-ticket, /chat, /device-guides). It is NOT one of the 20 crawled domains, so it is unreachable by this audit and effectively invisible from students.unimelb's own page bodies (which only LINK to it). The central current-students hub (students.unimelb.edu.au) is NOT the owner: it holds just 1 stray IT page and has no IT/devices/wifi/software section at all — it scored central_hub_pages=1. The actual service action lives behind login: my.unimelb (the student portal — 187 contextual links from students.unimelb), canvas.lms.unimelb.edu.au (the LMS itself), accounts.unimelb (password/identity), wireless.unimelb (eduroam), and unimelb.service-now.com (the ServiceNow IT ticket catalogue). None of these are crawled.

Where it lives

Location	Role	Note
studentit.unimelb.edu.au	TRUE canonical owner (uncrawled)	The real student IT site — /software, /mfa, /uniwireless, /support-ticket, /chat, /student-print, /device-guides/cookies-cache, /student-offboarding. Receives 55 contextual links from students.unimelb plus 33 from education, 30 from mdhs, 24 from eng, 7 from study (cross-site-flow.csv). Not in the 20 crawled domains, so absent from service-pages.csv entirely.
my.unimelb.edu.au	Authenticated student portal (behind login, uncrawled)	Single biggest IT destination: 187 contextual links from students.unimelb (cross-site-flow.csv); /sone/, /student-admin/fees, /graduation, student email. This is where systems action actually happens.
lms.unimelb.edu.au + canvas.lms.unimelb.edu.au	LMS gateway + the Canvas LMS itself (uncrawled)	lms.unimelb = guides/login gateway (37 links from students.unimelb, 36 from msd, 26 from law); canvas.lms = the authenticated LMS (27 from students, 24 from law). Faculties each link independently.
students.unimelb.edu.au	Expected central hub — but NOT the IT owner	central_hub_pages=1. No IT/devices/wifi/software section exists. Only crawled IT content: /course-admin/exams/.../lms-classic-quiz-user-guide and a /academic-skills/news2/microsoft-365-apps news item. Acts purely as a referrer (links to my.unimelb 187, studentit 55, lms 37, accounts 13, wireless 10).
eng.unimelb.edu.au (students section)	Faculty mini-IT-page (thin, redirect-only)	3 genuine pages under /students/coursework/.../technology-requirements/student-it, student-it-contact, chat-with-student-it — but these just funnel to studentit.unimelb. The other 190 eng hits are research/news false positives (faculty name contains 'Information Technology').
unimelb.service-now.com + accounts/wireless.unimelb	Identity, wifi & IT ticketing back-ends (uncrawled)	ServiceNow student/facilities catalogue (sc_cat_item, kb_article); accounts.unimelb for password/identity (13 links from students); wireless.unimelb/eduroam.html (10 links). The transactional core, all off-estate.

The seams a student hits

- students.unimelb -> my.unimelb: 187 contextual links — the heaviest seam in the whole IT service, and it lands a student straight into a login wall with no preceding orientation page.
- students.unimelb -> studentit.unimelb: 55 links to the real owner, but students.unimelb has no IT landing page of its own, so the student is bounced off the central hub onto a separate site to find basic help (wifi/software/MFA).
- Every faculty re-links the same systems independently rather than via the hub: studentit gets 33 (education) + 30 (mdhs) + 24 (eng) + 7 (study) + 5 (law) + 5 (finearts); lms gets 36 (msd) + 26 (law) + 17 (education); canvas gets 24 (law) + 10 each (mbs, finearts). A student crossing faculties hits N different on-ramps to the same destinations.
- Label drift at the seam: my.unimelb is described 6+ ways in anchor-text.csv — 'my.unimelb' (103), 'my.unimelb admin pages' (26), 'Go to my.unimelb' (24), 'Visit My.unimelb' (12), 'Student portal' (4), 'Re-enrol now' (4). The LMS is 'Log in to the LMS' (16) / 'Login to the LMS' (10) / 'LMS' (5) / 'Learning Management System' (4) / 'LMS Community login' (4). The same door wears many names.
- The entire service is a set of outbound jumps off the crawled estate into authenticated/separate systems (studentit, my.unimelb, canvas.lms, accounts, wireless, service-now) — none of which were crawlable, so a public-web student journey for IT help dead-ends at login walls almost immediately.

Duplication

- Faculty 'student IT' redirect pages duplicate the central pointer: eng.unimelb hosts 3 separate pages (student-it, student-it-contact, chat-with-student-it) that merely restate links to studentit.unimelb; msd/BELT, law (LMS Community), education and mdhs each maintain their own LMS/Canvas/student-IT pointer pages instead of relying on one canonical hub.
- Within eng.unimelb the SAME 'software engineer / academic misconduct AI tool' news article appears at 3 URL paths (/ingenium/..., /ingenium/ai-data/..., /ingenium/research/ai-data/...) — parallel URL-tree duplication inflating the count (82 url_trees for the service).
- 'Canvas' / 'LMS' login guidance is re-authored per faculty (msd BELT canvas-how-to-guides, law lms-community, finearts, mbs) rather than centralised, so the same LMS instructions exist in many faculty silos.
- my.unimelb / LMS are inconsistently labelled across pages (see seams) — effectively duplicate calls-to-action for one destination under different names, which reads as multiple services to a student.

Consolidation action. Make students.unimelb.edu.au the single front door for student IT and stop the scatter. (1) Create a proper 'IT, systems & tools' section on students.unimelb (devices/wifi, software, accounts & MFA, student email, LMS/Canvas, get help) that consolidates and clearly hands off to studentit.unimelb, my.unimelb, the LMS and ServiceNow — so the hub stops being a bare referrer with central_hub_pages=1. (2) Decide and enforce ONE canonical owner: either fold studentit.unimelb content under students.unimelb/it or, if studentit stays standalone, make students.unimelb's IT section the authoritative index that always links to it with consistent labels. (3) Standardise anchor text estate-wide — one name per destination ('my.unimelb (student portal)', 'Log in to the LMS (Canvas)', 'Student IT') — killing the 6-way my.unimelb / 5-way LMS label drift in anchor-text.csv. (4) Replace the ~per-faculty 'student IT' redirect pages (eng x3, msd/BELT, law, education, mdhs) with links to the single hub section, removing duplicate pointer pages and the parallel-URL-tree noise. (5) Explicitly flag for governance that the real service lives behind login (my.unimelb, Canvas, accounts, ServiceNow) — the public estate's job is one clean, consistently-labelled launchpad into those systems, not 17 domains each inventing their own on-ramp.

careers & employability [HIGH]

Careers is split four ways (central students.unimelb hub, faculty career sites, study.unimelb's prospective catalogue, and the alumni/www tree) with the real service action sitting on uncrawled login/app hosts — and the central hub is barely linked to from anywhere.

Spread: 18 domains · 77 URL trees · central-hub pages 42 · top owner study (440). **True footprint.** Raw classifier: 1,051 pages across 18 domains. Filtered TRUE current-student career-service footprint: ~320 pages. The single biggest distortion is the "top owner" study.unimelb (440): 428 of those are under /find/courses/ and 422 are literally /career-outcomes/ tabs — the prospective course CATALOGUE's marketing, not a student service (only ~12 study.unimelb pages are arguably service-relevant, e.g. /study-with-us/career-pathways). I dropped catalogue career-outcomes, plus faculty newsroom/news/ingenium/research-project/snapshot/faces-of-education/video-gallery/meet-our-students items and "careers-at-uni-melb" (staff jobs). What survives: students.unimelb/careers 36–42, fbe /bcom/career 76, mbs /career 72, eng /students/...career 37, education 25, www /alumni/...career 25, law /students/career-services 19, arts /students/employability 15, plus single stray pages on science/biomed/finearts/mdhs/msd. Note the genuine central-owner subtree is only ~36 pages — small relative to the ~148 faculty pages and the duplicated FBE+MBS estate. **Canonical owner.** Canonical owner is students.unimelb.edu.au/careers (title "Careers | Current students | The University of Melbourne") — it exists and is correctly the central hub, fanning out to /get-advice, /get-career-ready, /find-a-job, /careers/employability, mentoring and Smart Resume. BUT the actual transactional service lives on hosts that are NOT in the 20-domain content crawl (behind login/app): careersonline.unimelb.edu.au (Careers Online — the jobs board/appointment booking, the real engine; appears only as anchor text, 11 links), mentoring.unimelb.edu.au (STEM Industry Mentoring), career-checklist.unimelb.edu.au, smart-resume, and a canvas.lms.unimelb.edu.au "Careers and Employability LMS community". The hub is reached weakly: only 20 FBE pages, 7 MBS pages and 4 alumni/www pages contextually link into students.unimelb/careers, versus FBE sending 271 contextual links to study.unimelb. So the canonical owner is under-reached and the real action is off-estate behind auth.

Where it lives

Location	Role	Note
students.unimelb.edu.au/careers (+ /student-life/peer-mentor-program, /academic-mentoring)	Canonical central hub for current students — get-advice, get-career-ready (resumes/cover-letters/interviews),	~36 pages; routes to the real platforms (Careers Online, Smart Resume, Canvas LMS community). 36 internal pages link

Location	Role	Note
	find-a-job, employability, career-mentoring/ask-alumni, peer mentoring	to it but cross-site inbound is thin (FBE 20, MBS 7, alumni 4).
careersonline.unimelb.edu.au / mentoring.unimelb.edu.au / canvas.lms.unimelb.edu.au	The actual service engine — jobs board, appointment booking, STEM Industry Mentoring, Careers & Employability LMS community	NOT crawled (login/app hosts). Visible only via anchor text ('Careers Online' x11, 'STEM Industry Mentoring Program' x15, 'Careers and Employability LMS community'). The real student action sits here, outside the content estate.
study.unimelb.edu.au/find/courses/.../career-outcomes/	Prospective course-catalogue 'career outcomes' marketing tabs — NOT a current-student service	428 of the 'top owner' 440 pages; the frag_score's nominated owner is a classifier false positive. Inflates the footprint and mis-points the centre of gravity to prospective content.
fbe.unimelb.edu.au/bcom/career/** and mbs.unimelb.edu.au/career/**	Faculty (Business & Economics) career service — career-mentoring-program, employability drop-ins, internships, practicums, career discovery	76 + 72 pages running as a near-identical PARALLEL site on two domains; 58 near-duplicate page pairs at avg 0.868 similarity (top pairs 0.98–0.99). The single worst duplication in the service.
www.unimelb.edu.au/alumni/support-resources/career-support/** and /alumni/impact/become-a-mentor/**	Alumni-facing career tools, insights, and the mentor-recruitment side of mentoring programs (incl. faculty-specific STEM / Business mentoring)	25 genuine pages; overlaps the student mentoring offer (ask-alumni, become-a-mentor) but lives on www under /alumni, a 4th parallel tree with only 4 contextual links back to the student hub.
eng /students/coursework/career-resources, law /students/career-services, arts /students/employability-in-arts, education, science	Per-faculty career service trees, each with its own labels and URL shape (career-resources vs career-services vs employability)	~96 pages combined across 5 faculties; no shared template or naming — a student moving between faculties meets a differently-named careers section each time.

The seams a student hits

- Faculty -> prospective, not the student hub: FBE sends 271 contextual links to study.unimelb (course catalogue) but only 20 FBE pages reach students.unimelb/careers; MBS only 7. Students are routed toward marketing 'career outcomes' rather than the careers service.
- Hub -> off-estate handoff: the central Careers landing's key outbound links go to careersonline.unimelb, mentoring.unimelb and canvas.lms.unimelb — all uncrawled login/app hosts. The student crosses from public site to authenticated platform with no continuity, and the platforms are invisible to site search/crawl.
- Student <-> alumni mentoring split: mentoring/ask-alumni content exists both under students.unimelb/careers/get-advice/career-mentoring and under www.unimelb.edu.au/alumni/impact/become-a-mentor, but only 4 alumni pages link back into the student careers hub — the two halves of one mentoring program sit on different domains, weakly connected.
- Label invisibility: in anchor-text the students.unimelb domain is described purely by enrolment/admin labels (Stop 1 x754, Course withdrawal x617, Special consideration, Class timetable) — 'Careers' never surfaces as a cross-site anchor, so the hub is not discoverable by link label from elsewhere in the estate.
- Inconsistent section names across faculties: career-resources (eng) vs career-services (law) vs employability-in-arts (arts) vs /career (mbs) vs /bcom/career (fbe) — no canonical label, so a student hunting 'careers' must re-learn each faculty's wording.

Duplication

- FBE vs MBS BCom career sites are a near-literal clone: 58 near-duplicate page pairs at avg 0.868 similarity, with mentoring/career-mentoring-program, career-discovery, find-a-job, employability drop-ins all at 0.93–0.99 across fbe.unimelb.edu.au/bcom/career and mbs.unimelb.edu.au/career.

- Mentoring is authored in at least three places: students.unimelb.edu.au/careers/get-advice/career-mentoring (+ ask-alumni, find-a-mentor), www.unimelb.edu.au/alumni/impact/become-a-mentor (incl. business-and-economics and STEM programs), and the off-crawl mentoring.unimelb.edu.au STEM Industry Mentoring — same programs, parallel pages.
- Resume/cover-letter/interview 'get-career-ready' guidance is duplicated between the central hub and each faculty's career-ready section (e.g. mbs/career/ready/find-a-job, fbe/bcom/career/ready/*), rather than faculties deep-linking to the central pages.
- 'Career outcomes' narrative is mass-produced 422 times as per-course catalogue tabs on study.unimelb, semantically overlapping the employability message the careers service owns.

Consolidation action. Establish students.unimelb.edu.au/careers as the explicit single front door for the careers & employability service and consolidate around it. (1) Collapse the FBE/MBS duplicate BCom career estate — pick one owner (or move shared content to the central hub) and 301 the 58 near-duplicate pages, eliminating the most severe duplication. (2) Make faculties deep-link their /students/career-* sections into the central /careers hub and into Careers Online instead of routing students to study.unimelb's prospective /career-outcomes catalogue; standardise the faculty section label to 'Careers'. (3) Unify mentoring: one canonical mentoring landing on the student hub that links out to the alumni 'become a mentor' side and the mentoring.unimelb/STEM platform, removing the student/alumni split. (4) Surface the off-estate platforms (Careers Online, Smart Resume, Canvas Careers & Employability community, mentoring.unimelb) as first-class, consistently-labelled entry points from the hub and from my.unimelb, since that is where the real service action lives. (5) Add 'Careers' to the cross-site navigation/anchor vocabulary so the hub is discoverable by label, and fix the confirmed 404s (e.g. eng internship 'preparing-for-and-securing-an-internship', arts WIL-internships2, students.unimelb club-connection-grants).

research candidature (HDR) [HIGH]

HDR candidature is severely fragmented: its true canonical hub (gradresearch.unimelb.edu.au) sits outside this scrape entirely, while ~8 faculty CMSes each re-host the same lifecycle content under different URL trees — including byte-identical Education/MDHS mirrors — with no central students.unimelb ownership.

Spread: 18 domains · 77 URL trees · central-hub pages 15 · top owner msd (176). **True footprint.** Raw classifier tags 850 pages across 18 domains. Filtering: ~155 are graduate-researcher PROFILE/bio pages (student directory, e.g. msd/graduate-research/graduate-researchers/ = 67, arts/profiles/ = 123 of 168); ~79 are news/events/awards/prize/congratulations items (e.g. medicine "Chancellor's Prize", "passes Confirmation" TLL news); 12 are dead 404s; a further ~30-40 are clinical-supervision or research-OPPORTUNITY/applicant false positives (medicine clinical-supervision x6; biomedicalsciences "graduate-research-opportunities"). Filtered TRUE current-student HDR service footprint ~ 560-615 pages, but genuinely DISTINCT authored candidature pages are only ~80-120 — most faculty pages are thin re-wrappers/mirrors of the central hub (the Education "Confirmation" page carries 150 links, 104 pointing straight back into gradresearch.unimelb.edu.au). **Canonical owner.** gradresearch.unimelb.edu.au — the "Graduate Research Hub" — is unambiguously the canonical owner: it is the consistent anchor label (89x) and the dominant cross-site link DESTINATION (education->gradresearch 1972, mdhs->gradresearch 1882 contextual links; a single Education candidature page links to it 104 times at paths like /being-a-candidate/confirmation, /reviewing-my-progress, /key-contacts). BUT it was NOT crawled — it is not among the 20 scraped domains (0 pages in service-pages.csv) and behind it sits the authenticated action in my.unimelb/Themis (milestone submission, candidature variation). So in this estate dataset the canonical owner is reached only as an off-scrape black box that every faculty funnels into. students.unimelb.edu.au, the central current-students hub, owns NONE of candidature management — only 15 tagged pages, and they are Academic-Skills writing support (/academic-skills/graduate-research-services) plus mis-tagged international/exam pages, not candidature admin.

Where it lives

Location	Role	Note
gradresearch.unimelb.edu.au (Graduate Research Hub)	Canonical owner of candidature lifecycle (being-a-candidate/confirmation, reviewing-my-progress, thesis examination, key-contacts)	NOT in the scrape (0 crawled pages) yet the top cross-site link destination — faculties send 1,800-1,970 contextual links each here. The real owner is an off-estate blind spot in this dataset.

Location	Role	Note
msd.unimelb.edu.au/graduate-research	De-facto most-visible HDR landing in the crawled estate	614 inbound links — the single highest-inbound HDR hub found (hubs.csv), a FACULTY page, not a central one. MSD is also the raw top owner (176 tagged pages, 67 of them researcher profiles).
education.unimelb.edu.au/study/graduate-research/current-students/ AND mdhs.unimelb.edu.au/research/research-training/current-students/	Two faculty mirrors of the full candidature lifecycle	near-duplicates.csv cluster 4.1_HDR_education_vs_mdhs: jaccard=1.0 (byte-identical) across pre-confirmation, confirmation, progress-review, at-risk, unsatisfactory-progress, thesisexamination/{writing,submitting,thesis-with-publication}-my-thesis, plus support-services. Same content, two CMSes, two URL paths, neither canonical.
arts.unimelb.edu.au/students/graduate-research/manage-your-research-program/ and law.unimelb.edu.au/students/grd/candidature-management/	Further parallel faculty candidature trees with divergent labels	Arts 'manage-your-research-program' (milestone-reviews, candidature-variation, thesis-requirements); Law 'grd/candidature-management' (PhD/MPhil milestones, supervision, degree-requirements). Same service, 4+ different URL-tree names and labels (77 url_trees total).
students.unimelb.edu.au/academic-skills/graduate-research-services	Central hub's only HDR contribution = writing/skills support	Central students hub hosts thesis WRITING skills (incorporating publications, writing thesis sections, GenAI FAQs) but no candidature ADMIN — reinforcing that admin lives off-site at gradresearch.

The seams a student hits

- The biggest seam: every faculty candidature page hands off to gradresearch.unimelb.edu.au, which is uncrawled/off-estate — education->gradresearch 1,972 and mdhs->gradresearch 1,882 contextual links; one Education 'Confirmation' page alone fires 104 links into gradresearch. The student is bounced from a faculty wrapper to a separate hub domain for the actual process.
- A second hop then drops the student behind login: the real candidature actions (milestone/confirmation submission, candidature variation) live in my.unimelb/Themis, uncrawled and auth-gated — the public pages only describe the process.
- msd.unimelb.edu.au sends 8,069 contextual links to students.unimelb.edu.au — the dominant cross-site flow in the whole estate — yet students.unimelb owns no candidature content, so HDR students arriving at the central hub find only writing-skills pages and must navigate back out to gradresearch or their faculty.
- Inconsistent entry labels fracture wayfinding: the same service is reached via 'manage-your-research-program' (Arts), 'candidature-management' (Law), 'reviewscandidature-variations' (Education/MDHS), and 'research-training' (MDHS/biomed) — no shared vocabulary across 77 URL trees.
- Broken links on the path: mdhs.unimelb.edu.au current-student candidature pages 404 (overseas-student-health-cover, renewing-your-student-visa, building-access/student-card) and arts graduate-research scholarships pages 404 — students hit dead ends mid-journey (dead-pages.csv).

Duplication

- VERBATIM mirror (jaccard=1.0, near-duplicates.csv cluster 4.1_HDR_education_vs_mdhs): Education /study/graduate-research/current-students/ and MDHS /research/research-training/current-students/ host byte-identical pages for pre-confirmation, confirmation, progress-review, at-risk, unsatisfactory-progress, making-changes, AND thesisexamination/{writing-my-thesis, submitting-my-thesis, thesis-with-publication, my-thesis-in-the-library, thesis-prizes}, plus student-support-services/{counselling, library, housing, safer-community} and contact-us/{it-support, ask-unimelb}.
- Both Education and MDHS mirrors are themselves thin wrappers duplicating gradresearch.unimelb.edu.au's canonical content (the Education Confirmation page = 150 links, 104 into gradresearch/being-a-candidate/*) — triple-authored: hub + 2 faculty copies.
- At least 4 parallel faculty candidature-management trees describe the same milestones/thesis/supervision process (Education, MDHS, Arts, Law), each maintained separately under a different path and label.

- ~155 graduate-researcher profile pages and ~79 news/award items are scattered per-faculty (msd, arts, medicine, eng) — directory duplication that inflates the footprint without adding service content.
- Consolidation action.** Make gradresearch.unimelb.edu.au the single, named system of record for candidature management and STOP faculties from re-hosting its content. Concretely: (1) collapse the byte-identical Education and MDHS '/current-students/' candidature mirrors and the Arts/Law parallel trees into canonical redirects to the matching gradresearch.unimelb.edu.au/being-a-candidate/* pages — keep only genuinely faculty-specific deltas (local contacts, school milestones, advisory-committee chairs) as short overlays that deep-link to the hub. (2) Surface gradresearch prominently from students.unimelb.edu.au (today the central hub offers HDR students only Academic-Skills writing pages while 8,069 msd->students links dump them somewhere with no candidature path) so there is one obvious front door. (3) Standardise the entry label to 'Graduate Research / candidature management' estate-wide, retiring the divergent 'manage-your-research-program' / 'candidature-management' / 'reviewscandidature-variations' / 'research-training' variants. (4) Fix the 12 dead candidature links (MDHS international-student + access pages, Arts scholarships). This is the research-paradox in the data: the largest research faculties (MSD, MDHS, Arts) carry the most HDR pages yet none owns the service — consolidation onto the existing hub removes 3x duplication and the faculty->hub->login double-bounce.

student life & community [HIGH]

"Student life" is split across three disconnected universes — a strong central students.unimelb hub, 12+ parallel faculty clubs/orientation silos, and an alumni-run community/mentoring stream — with the actual clubs/societies and union action living entirely OUTSIDE the crawled estate (UMSU/GSA) and never aggregated anywhere.

Spread: 17 domains · 58 URL trees · central-hub pages 65 · top owner study (132). **True footprint.** Raw classifier: 424 pages / 17 domains. Filtered TRUE current-student footprint: ~194 pages, and only ~150-160 distinct service pages once eng.unimelb's self-referential orientation event-calendar is discounted (eng shows 76 but ~46 are /orientation/.../upcoming-events/ and individual event/scholarship detail nodes). How I filtered: (1) dropped ALL 132 study.unimelb pages — they are prospective MARKETING (/student-life/meet-our-students, life-at-melbourne, settling-in, cost-of-living), not current-student service; only 6 weren't even student-life-prefixed. (2) dropped handbook /subjects/ + /components/ (course catalogue), scholarships /awards/-society- (award listings matched on "society"), and research.unimelb institute pages — keyword false positives. (3) dropped faculty /news, /news-and-events, /our-research, /centres/, /school-of-, /sbs-research-groups pages tagged by stray "society"/"civil society"/"community"/"belonging" keywords (heavy in arts, law, medicine, education, biomedical, fbe). Genuine signal = paths under /students/, /current-student(s)/, /student-life, /orientation, /clubs, /enrichment, student-societies. **Canonical owner.** students.unimelb.edu.au/student-life is the correct canonical owner and IS reached (64 true pages, the second-largest footprint; clean /student-life/* tree covering belonging, Melbourne Plus, peer mentoring, volunteering, student voice/surveys, food relief, transport). It is a genuinely good hub — but it is incomplete as the service's owner: it contains ZERO clubs/societies content (string "clubs"/"societ" appears 0 times on the landing page) and links the two peak bodies only weakly (UMSU 2x, GSA 1x). The real centre of gravity for clubs, societies, events and union services is UMSU (umsu.unimelb.edu.au, plus intl.umsu.unimelb and legacy www.union.unimelb) and GSA (gsa.unimelb.edu.au) — and NONE of those are within the 20-domain crawl; they sit outside the estate entirely and are only reachable by outbound link.

Where it lives

Location	Role	Note
students.unimelb.edu.au/student-life (64 pages)	Canonical central hub / owner — belonging, Melbourne Plus, peer & academic mentoring, volunteering, student voice, affordable food, campus facilities, transport	Best-structured location and correctly reached, but omits clubs & societies entirely and only links UMSU 2x / GSA 1x; mentoring here is disconnected from the alumni mentoring stream

Location	Role	Note
umsu.unimelb.edu.au / intl.umsu.unimelb / www.union.unimelb / gsa.unimelb.edu.au (OUTSIDE the crawl)	The actual student-union framing — clubs & societies, events, volunteering, welfare, legal service; GSA for graduate students	Where the real service action sits, yet entirely outside the 20-domain estate. Reached only as outbound cross-site links: ~400+ contextual links to UMSU from 12+ source domains, ~140+ to GSA. Labelled 6+ inconsistent ways (see seams)
Faculty 'clubs & societies' hubs — 12+ parallel pages across eng, law, arts, medicine, msd, fbe, mbs, biomedical, science	Faculty-society framing — each faculty independently authors its own clubs/societies list and orientation	e.g. eng/students/clubs/our-clubs, law/students/orientation, msd/current-students/student-experience/clubs-and-societies (612 inbound), medicine/.../networks/student-societies, biomedical student-societies; fbe and mbs clubs pages are 97.9% near-duplicates of each other
eng.unimelb.edu.au/students/coursework/.../orientation/... (46 orientation pages)	Faculty orientation framing — a deep, self-referential FEIT orientation + eng-and-it-calendar event tree	Inflates the raw count and contains broken links (e.g. /orientation/Melbourne%20Connect%20Building, /Peter%20Hall%20Building -> Page not found); a parallel orientation universe to the central new-students/melbourne-orientation page
www.unimelb.edu.au/alumni (137-page alumni domain)	Alumni-network framing — runs current-student-facing community: 'Welcome to Melbourne' volunteering, alumni mentoring, STEM/faculty-specific mentoring, global-community	Third framing with no connecting thread to students.unimelb; structurally an advancement/alumni site, so current-student mentoring & volunteering are split from the identical-purpose programs on the central hub

The seams a student hits

- The service's core (clubs, societies, union services) lives OUTSIDE the crawled estate on UMSU/GSA, so every path to it is a cross-site hop off the .edu.au estate — the single biggest seam: a student must leave students.unimelb to reach it.
- Inconsistent UMSU labelling fractures wayfinding: anchor text varies across 'University of Melbourne Student Union (U...', 'UMSU', 'UMSU clubs and societies', 'Volunteering with UMSU', 'Legal Service (UMSU)', 'Union Mart' and even '(no text)' / 11 untexted links — plus three host variants (umsu.unimelb, intl.umsu.unimelb, www.union.unimelb).
- No faculty→central or faculty→faculty aggregation: 12+ faculty clubs/societies hubs each link only to their own list; a student in one faculty cannot discover another's societies or the central picture. study.unimelb/student-life/clubs-societies-and-events is prospective-facing, not the current-student aggregator.
- Broken orientation cross-links inside the faculty tree: eng orientation links to /Melbourne%20Connect%20Building and /Peter%20Hall%20Building (404), and an mdhs clubs-and-societies-link-page 404s — students hit dead ends mid-journey.
- Mentoring is doubly authored with no bridge: peer-mentor-program + academic-mentoring on students.unimelb vs alumni mentoring + STEM mentoring on www.unimelb.edu.au/alumni — same intent, two unconnected sites, and the central hub links alumni only 2x.

Duplication

- 12+ parallel faculty 'clubs & societies' hub pages (eng x2 trees, law, arts, medicine, msd, fbe, mbs, biomedical x2, mdhs, science, education) — each a separately maintained list of student societies with no shared source.

- fbe.unimelb/bcom/career/your-community/clubs-and-societies and mbs.unimelb/career/your-community/clubs-and-societies are 97.9% near-duplicates (near-duplicates.csv row 4.2_BCom_careers_FBE_vs_MBS).
- Orientation authored in ~10 places: a central students.unimelb/new-students/melbourne-orientation plus deep faculty orientation trees (eng 46 pages, law /students/orientation + /jd/enrichment/orientation, arts, fbe bcom/orientation, science bsc/bag-orientation, biomedical, education FoE orientation guide).
- Mentoring duplicated across central (peer-mentor-program, academic-mentoring) and alumni (find-mentoring, faculty-specific STEM mentoring) framings.
- Student-life landing concept itself is triplicated: students.unimelb/student-life (current-student), study.unimelb/student-life (prospective marketing), and per-faculty student-life pages (science/students/student-life, eng/ingenium/student-life) — same label, different audiences/owners.

Consolidation action. Make students.unimelb/student-life the undisputed front door and consolidate the three framings behind it. Concretely: (1) Add a clubs & societies + orientation section to the central hub that AGGREGATES — embed/deep-link the 12+ faculty society lists and the UMSU/GSA directories from one canonical index, so no student has to know which faculty silo or external site to hunt. (2) Standardise every UMSU/GSA reference to one label and one host (retire www.union.unimelb / collapse intl.umsu under a single 'UMSU clubs & societies' link pattern), fixing the 6-way anchor inconsistency. (3) Fold the alumni-run current-student programs (Welcome to Melbourne volunteering, alumni/STEM mentoring) into the central mentoring/volunteering pages as one journey rather than a separate alumni-site stream. (4) Retire or redirect duplicate faculty clubs hubs to the central index (start with the 97.9%-identical fbe/mbs pair) and fix the broken eng orientation links. Net: ~150-160 scattered pages across 13 domains + 3-4 external union/alumni hosts collapse toward a single current-student owner with consistent labels and working cross-links.

placements & WIL [HIGH]

Placements/WIL is the estate's most centrally-absent service: ~35-40 genuine pages scattered across 8+ faculty silos with literally zero central WIL front door on students.unimelb, four different names for the same thing, and the real action (SONIA placement system, allocation, host approval) sitting behind login.

Spread: 13 domains · 29 URL trees · central-hub pages 4 · top owner fbe (25). **True footprint.** Raw classifier: 101 pages / 13 domains. Filtered TRUE current-student footprint: ~35-40 pages (~60% false-positive rate). I removed: (1) graduate/academic JOB "placements" — fbe finance/management/marketing PhD-outcome pages ("Recent Academic Placements", "graduate-placement/emma-leyi-li") ~9; (2) "displacement" topical noise (law/arts climate & statelessness events) ~5; (3) person-name "Sonia" — confirmed by reading raw HTML these are alumna Sonia Pranatha (education Faces-of-Education) and researchers Sonia Shaikh/Sonia Bhalotra, NOT the SONIA placement system ~6; (4) "replacement" (student-card replacement, joint-replacement surgery) ~4; (5) medicine research-groups/medical-education-research/work-integrated-learning = WIL RESEARCH not the service ~4, plus clinical surgery research (limb reconstruction, total joint replacement) ~8; (6) faculty newsroom/blog/ingenium practicum TESTIMONIALS (fbe "Amsterdam Awaits", eng "My life as a pinball machine") ~22. Genuine core that remains: education Master-of-Teaching placement admin ~18 pages (allocation, requirements, forms, policies, WWCC, seminars, structure), msd Internships & Vocational Placements (ABPL90434) 5, mdhs /study/current-students/placements + requirements 2, arts /students/wil "Experiential Learning" 1, mbs/fbe Business & Global Business Practicum ~7 (heavily duplicated event notices), handbook PSYC90122 Professional Placement (Clinical) 1, medicine "Going Rural Health student placements" ~3. **Canonical owner.** SHOULD be students.unimelb.edu.au (central current-students hub) — but there is NO central WIL/placements owner and it is NOT reached. Searching every crawled students.unimelb meta.json for placement/wil/internship/practicum/work-integrated returns only: "Students@Work Internship Program" (an internal campus-jobs scheme under /careers/find-a-job/working-on-campus, NOT academic WIL), "Placement Summary Letter (Education students)" (a transcript admin artifact under /course-admin), and "Replacement student card" (a keyword false match). No central "Work-Integrated Learning" or "Placements" landing page exists anywhere. The real owner is de-facto each faculty's placement office, and the true transactional surface (SONIA Online allocation/forms/host approval, referenced across mdhs & education placement pages) sits behind my.unimelb login and is uncrawled. frag_score 377 with top "owner" fbe holding just 25/101 raw pages (and most of those are testimonials) = no dominant owner.

Where it lives

Location	Role	Note
https://education.unimelb.edu.au/study/current-students/employability-in-education/master-of-teaching/placement-requirements (+ /placement-details, /placement-allocation-process and ~15 children)	De-facto canonical owner for Initial Teacher Education placements — the deepest, most complete genuine cluster (~18 pages: allocation, forms, policies, WWCC, seminars, structure, attendance, conduct, unsatisfactory performance)	Self-contained faculty silo: of 35 links on placement-requirements, only 1 points back to students.unimelb and 0 to any central WIL hub. Buried 4 levels deep under a Master-of-Teaching-specific path; undiscoverable from the centre.
https://msd.unimelb.edu.au/current-students/subject-information/internships-vocational-placements (+ ABPL90434 how-to-apply / information-for-hosts / self-sourced)	Built-environment WIL owner — full mini-service: subject info, how-to-apply, host info, self-sourced pathway	Labelled 'Internships and Vocational Placements' — a third distinct name. Lives under /subject-information, so reads as catalogue rather than a service.
https://mbs.unimelb.edu.au/career/apply-your-learning/business-practicum & /global-business-practicum (mirrored at fbe.unimelb.edu.au/bcom/career/...)	Business-school WIL owner — practicum + internship program (workhub, self-sourced, faqs)	Same content authored on TWO domains (fbe + mbs) at 0.83-0.92 similarity; the application calendar is fully duplicated. Labelled 'Business Practicum' — a fourth name.
https://mdhs.unimelb.edu.au/study/current-students/placements (+ /students/requirements)	Health-faculty (MDHS) clinical-placement entry point	Thin: only the hub + a requirements page were captured. Real clinical allocation runs through SONIA behind login. Title field empty in crawl — weak metadata.
https://students.unimelb.edu.au (central hub)	Canonical owner that SHOULD host a central WIL front door — but hosts none	Only placement-adjacent pages are Students@Work (campus jobs), an Education-only Placement Summary Letter, and replacement-card noise. The decisive gap: students cannot discover any faculty placement offering from the centre.
https://handbook.unimelb.edu.au/2026/subjects/psyc90122 (Professional Placement (Clinical) 2)	Catalogue record for a placement SUBJECT — the only handbook touchpoint	Catalogue, not service admin. Illustrates that the only 'central' surface a student finds is a subject entry, with no link onward to how the placement actually works.

The seams a student hits

- **BROKEN FRONT DOOR:** students.unimelb has 0 WIL/placements landing page; outbound contextual links from the centre into faculty WIL trees are negligible and generic (students.unimelb→education 9, →mdhs 8, →msd 5, →mbs 4 total links across the ENTIRE domain pair, none WIL-specific) — a student on the central hub has no path to faculty placements.
- **ONE-WAY linkage:** faculties link UP to students.unimelb (education→students 275, mdhs→175, mbs→26) for generic login/admin chrome, but the centre does not link DOWN to their placement content — the connection exists only in the direction that doesn't help discovery.
- **DEAD WIL entry points:** arts.unimelb /students/undergraduate/.../work-integrated-learning-internships2 returns 404, and eng.unimelb /students/.../preparing-for-and-securing-an-internship returns 'Page not found' — two faculty WIL doors are broken (dead-pages.csv).
- **NO SHARED VOCABULARY:** when these domains are linked, anchor text is generic faculty names ('Faculty of Education', 'Melbourne School of Design', 'Melbourne Business School') or vague CTAs ('Learn more', 'Find out more', 'here') — never

'Placements' or 'WIL' (anchor-text.csv), so even where cross-links exist a student can't recognise them as the placement service.

- AUTH WALL: the actual transactional service (SONIA Online — allocation, timesheets, host approval, referenced across mdhs & education placement pages) is behind my.unimelb login and uncrawled; the public estate only describes placements, it never lets the student DO them, and each faculty wires up its own SONIA instance separately.

Duplication

- FBE ↔ MBS Business/Global Business Practicum: the same practicum + internship service is authored on two domains. near-duplicates.csv shows /career/apply-your-learning/internship/workhub (0.86), /self-sourced (0.83), /faqs (0.59) and the entire fbe-student-calendar/.../mbs-global-business-practicum-* event series all mirrored fbe↔mbs at 0.92 similarity.
- Practicum APPLICATION calendar notices duplicated wholesale: 'MBS Global Business Practicum (January 2027/November) Applications Open' each appear under both fbe.unimelb.edu.au/bcom/career/fbe-student-calendar/... and mbs.unimelb.edu.au/career/fbe-student-calendar/... — identical event, two URLs (and the path literally embeds 'fbe-student-calendar' inside the mbs domain).
- Same SERVICE re-implemented per faculty with no shared template or name: education 'Placement Requirements', msd 'Internships and Vocational Placements', mbs 'Business Practicum', arts 'Experiential Learning', mdhs 'placements' — five faculties each build a parallel WIL site (29 url_trees for the service) covering the same student needs (eligibility, allocation, host, WWCC/safety, assessment).
- education Placement Summary Letter exists at TWO students.unimelb paths (/course-admin/academic-transcripts-and-statements/... and /your-course/manage-your-course/.../academic-transcripts-and-statements/...) — the one genuinely central placement artifact is itself duplicated.

Consolidation action. Create the missing central WIL front door on students.unimelb — a single 'Work-Integrated Learning & Placements' landing page that (a) explains WIL/placements/practicums/clinical placements in one shared vocabulary, (b) routes students to the correct faculty owner via a clearly-labelled directory (Education ITE, MDHS clinical, MSD vocational, Business practicum, Arts experiential), and (c) links straight to the SONIA login as the action surface. Then: standardise the label to 'Placements & WIL' across faculty anchor text; collapse the FBE↔MBS practicum duplication to one canonical owner (MBS) with the other 301-redirecting; and fix the two dead WIL pages (arts work-integrated-learning-internships2, eng preparing-for-and-securing-an-internship). This is the estate's clearest 'no central front door' case — the fix is additive (build the hub that should exist) rather than a teardown, so it is low-risk and high-impact for student discoverability.

international & visa [HIGH]

Australia's highest-consequence student journey is forked across three near-identical live URL trees on the same hub (canonical, deprecated, and a publicly-crawable 2026 sandbox draft), with 11 faculties still wired to the deprecated tree and the highest-risk compliance pages dead-ending at DHA info links instead of the University's own enrolment-variation forms.

Spread: 13 domains · 27 URL trees · central-hub pages 74 · top owner students (74). True footprint. Raw classifier: 132 pages / 13 domains. Filtered TRUE current-student footprint: ~75 pages, almost all on students.unimelb.edu.au (+1 services.unimelb health page). I removed 57 false positives: 24 law.unimelb pages that matched on "coe-adms" = ARC Centre of Excellence for Automated Decision-Making, NOT Confirmation of Enrolment (all /centres/coe-adms research-project pages); 9 HDR research-training visa/OSHC/CoE pages (education/mdhs /research/research-training/, 2 of which are "Page not found"); 18 prospective study.unimelb /how-to-apply + faculty "meet-our-students"/expo/news pages; 2 medicine pages matching a person named "Amy Coe"; 2 alumni stories; 2 dead/404. Within the 75 true pages, the visa CORE is ~35 pages triplicated across three trees (14 canonical + 11 deprecated + 10 sandbox), plus ~25 intl-support landing/checklist pages and ~14 visa-adjacent admin pages.

Canonical owner. Canonical owner IS reached and correct: students.unimelb.edu.au is the top domain with 74 of 74 genuine pages, and the service rightly lives under students.unimelb. The hub has already migrated its own navigation to the /support-and-wellbeing/international-student-support/visas/ tree — students.unimelb internal links point there 275 times vs 66 to the old /student-support/ tree and 89 to /sandbox/, and the /support-and-wellbeing/ landing gets 45 internal links vs just 1 for the /student-support/ landing. The problem is not a missing owner; it is that the two superseded trees were never retired and the real transactional action (CoE in my.unimelb/Stop 1, OSHC purchase, visa lodgement in DHA ImmiAccount) sits off-site behind login/government, so the public pages are advisory shells.

Where it lives

Location	Role	Note
students.unimelb.edu.au/support-and-wellbeing/international-student-support/visas/ (14 pages)	CANONICAL current live tree	The hub's own nav resolves here (275 internal inbound links; landing gets 45). Covers apply, extend, CoE, meet-conditions, manage-enrolment-changes, working, online-study. This is where students should land.
students.unimelb.edu.au/student-support/international-student-support/visas/ (11 pages)	DEPRECATED duplicate tree still public	Near-byte-identical to canonical (same 9 DHA links, same anchor text, same order). Should be 301-redirected but is live and is what 11 external faculty/central domains link to (659 links; msd.unimelb alone fires 614).
students.unimelb.edu.au/sandbox/2026-uplifts/student-visas/ (10 pages)	UNFINISHED 2026 draft, publicly crawlable	A third parallel copy. /renew-your-student-visa is a noindex 'University of Melbourne - Sign In' wall (broken/login-trapped). Even receives a stray inbound link from education.unimelb — a draft leaking into production link graph.
.../visas/meet-your-student-visa-conditions/manage-enrolment-changes-that-affect-your-visa (+ reduced-study-load, working-on-a-student-visa)	Highest-risk compliance pages	Where a student whose enrolment change threatens their visa must ACT. They link 6 DHA info pages and a generic 'Stop 1 / ask.unimelb' link but 0 forms.your.unimelb enrolment-variation forms — the actual action form is unreachable from the moment of risk.
forms.your.unimelb.edu.au/4747166 ('Request withdrawal advice' / 'Request re-enrolment advice' / enrolment enquiry webform)	The action forms that SHOULD be linked	These enrolment-variation webforms demonstrably exist elsewhere in the estate (1,020 forms.your.unimelb links found overall) but are absent from the highest-risk visa pages — proving the gap is a broken seam, not a missing service.
my.unimelb / Stop 1 / DHA ImmiAccount / OSHC providers (Medibank etc.)	Where the real transaction happens (off public web)	CoE requests route to Stop 1/my.unimelb behind login; visa lodgement to immi.homeaffairs.gov.au; OSHC to external insurers. The public pages are advisory only — the consequential actions are all uncrawled/off-site.

The seams a student hits

- **DEPRECATED-TREE SEAM:** 11 distinct external domains (msd, eng, study, education, mdhs, services, arts, research, fbe, mbs, law) send 659 contextual links into the superseded /student-support/ tree instead of the canonical /support-and-wellbeing/ tree — msd.unimelb alone 614. Faculty students are routed to the wrong copy.
- **ACTION-FORM SEAM:** the highest-consequence pages (manage-enrolment-changes-that-affect-your-visa, reduced-study-load, working-on-a-student-visa, meet-your-student-visa-conditions) link 0 forms.your.unimelb action forms — only DHA info pages and a generic Stop 1 link — even though the enrolment-variation forms exist in the estate. A student at the point of immigration risk cannot reach the form to vary enrolment compliantly.
- **REDIRECT/SHORTENER SEAM:** the only cross-domain visa anchor ('Update your visa status' x3) points to go.unimelb.edu.au, a link-shortener, not directly to the visa page — adding an opaque hop and defeating provenance.
- **SANDBOX-LEAK SEAM:** the unfinished /sandbox/2026-uplifts/ draft is publicly crawlable, contains a noindex Sign-In dead page (renew-your-student-visa), and already receives an inbound link from education.unimelb — a third forkable destination a student could land on via search.
- **OFF-SITE TRANSACTION SEAM:** every consequential action (CoE via Stop 1/my.unimelb, OSHC purchase via external insurer, visa lodgement via DHA ImmiAccount) leaves the public site for login-gated or government systems, so the advisory pages and the action systems are only loosely stitched (handoffs via ask.unimelb x444, services.unimelb x290, forms.your.unimelb x260 at hub level).

Duplication

- **TRIPLICATION** of the visa core: the same ~10-14 pages (apply-for-a-student-visa, extend, request-a-new-CoE, meet-conditions, manage-enrolment-changes, OSHC, healthcare-for-other-visa-types, support-with-student-visas) exist in all three trees — /support-and-wellbeing/ (14), /student-support/ (11), and /sandbox/ (10).

- Near-byte-identical content: the three apply-for-a-student-visa pages carry the IDENTICAL 9 immi.homeaffairs.gov.au links (Genuine Student requirement, student-500, attach-docs, bringing-family, check-twice-submit-once, ImmiAccount, change-in-situation, after-you-apply, processing-times) in the same order with the same anchor text — clearly copied, not independently authored.
- Label inconsistency across the forks: 'apply-for-a-student-visa' (canonical/sandbox) vs 'applying-for-a-student-visa' (deprecated); 'meet-your-student-visa-conditions' (canonical) vs 'meet-your-student-visa-and-enrolment-requirements' (sandbox); plus a 4th stray path /student-support/support-for-international-students/visas/ — so the same renewal page exists under at least three different URL labels.
- Faculty-level re-authoring: HDR equivalents (renewing-your-student-visa, OSHC, request-a-CoE, CMT) are independently re-published under education.unimelb and mdhs.unimelb /research/research-training/, two of which are already 'Page not found' — a 4th de-facto copy that has begun to rot.
- 27 url_trees and frag_score 351 (per service-fragmentation.csv) — the highest-consequence service is also among the most structurally forked.

Consolidation action. Treat this as the priority consolidation because the consequence of error is immigration/visa cancellation, not inconvenience. (1) Designate /support-and-wellbeing/international-student-support/visas/ the single source of truth and 301-redirect the entire /student-support/.../visas/ tree (and the stray /support-for-international-students/ path) onto it; the hub nav already points there, so only inbound links need fixing. (2) Reissue the canonical URLs to the 11 faculty/central domains and have them repoint the 659 deprecated-tree links (prioritise msd's 614, almost certainly a shared footer/nav include — fix once, fixes most). (3) Unpublish or noindex+robots-block the /sandbox/2026-uplifts/ draft now and remove the inbound link from education.unimelb; ship its improvements into the canonical tree rather than leaving a third public copy with a broken Sign-In page. (4) Close the action-form seam: add a prominent, correctly-targeted forms.your.unimelb enrolment-variation/'request withdrawal/re-enrolment advice' link (and the Stop 1 CoE path) directly on manage-enrolment-changes-that-affect-your-visa, reduced-study-load and working-on-a-student-visa — the page where the student is at risk must link the form that resolves it. (5) Replace the go.unimelb 'Update your visa status' shortener with a direct canonical link. Net effect: collapse 3 forked trees to 1, repair ~660 misrouted cross-site links, and connect the highest-risk pages to the actual remedy.

fees, finance & census [HIGH]

Fees is reverse-funnelled and alias-bloated: the classifier's 406 pages collapse to ~35 true current-student pages (~10 unique canonical), while 363 "fee" pages actually live on the prospective study.unimelb site and the hub's own answers are outsourced to the dead legacy ask.unimelb FAQ.

Spread: 7 domains · 18 URL trees · central-hub pages 29 · top owner study (363). **True footprint.** Raw classifier: 406 pages / 7 domains. TRUE current-student footprint ~ 35-40 pages, of which only ~10 are unique canonical hub pages. Filtering: (1) removed 348 study.unimelb /find/courses/.../fees/ per-course catalogue tabs (one fee tab per degree = prospective CATALOGUE, not the student service); (2) removed 15 study.unimelb /how-to-apply/fees policy pages (real fee content but applicant-facing funnel source); (3) removed 5 false positives — fbe /newsroom/ scholarship media release, finearts-music /events/ exhibition, 2 law /centres/mccl/ research-centre pages (caught on "financial"/"fee"), and services.unimelb /health/make-an-appointment/fees (GP-clinic appointment fees, not the fee service). What remains: 29 students.unimelb hub rows MINUS 2 "Page not found" = 27 genuine, but these de-dupe to ~10 unique pages once ?in_c=... tracking variants and the /your-course/ + /admin/fees/ alias trees (both canonical to /course-admin/) are merged; PLUS 8 genuine faculty HDR/coursework fee pages (law graduate-research fees, fbe PhD stipend/fee-remission, arts graduate-coursework fees-and-payments + census). Verified against service-pages.csv and raw canonical tags in crawl/students-full. **Canonical owner.** Canonical owner is students.unimelb.edu.au, and within it the /course-admin/ tree is the de-facto authoritative one: /your-course/manage-your-course/fees-and-payments/* and the legacy /admin/fees/pay-my-fees BOTH carry rel=canonical back to /course-admin/paying-your-fees (verified in page.html). So the owner EXISTS and is reached — but it is undermined three ways: (1) it co-exists with two live alias trees students still navigate; (2) its census-dates entry at /admin/census-dates self-canonicalises to /page-not-found (dead); (3) the real fee ACTION (view statement, pay, set up FEE-HELP/CSP) sits behind login on my.unimelb / forms.your.unimelb / the ecommerce gateway, all uncrawled — the public hub only describes fees, then hands off to auth or to the legacy ask.unimelb FAQ for the actual answers.

Where it lives

Location	Role	Note
students.unimelb.edu.au/course-admin/{paying-your-fees, understanding-your-fees, census-dates, fee-remission-in-special-circumstances}	Canonical current-student owner tree	The authoritative pages; sibling /your-course/ and /admin/fees/ trees rel=canonical here. census-dates is a top inbound hub (300 inbound, hubs.csv). But 7 of these pages outsource substance to ask.unimelb (76 FAQ links).
students.unimelb.edu.au/your-course/manage-your-course/fees-and-payments/* AND /admin/fees/*	Duplicate alias trees on the SAME hub	Live, navigable, separately indexed, but every page canonicals back to /course-admin/. Pure parallel-tree fragmentation within one domain; /admin/census-dates is dead (->/page-not-found).
study.unimelb.edu.au/find/courses//fees/ (348 pages) + /how-to-apply/fees (15)	Prospective catalogue + applicant fee policy (reverse-funnel)	363 of 406 classifier hits. Per-course fee tabs for applicants, NOT current students. study->students flow=373 links; students->study=125 (hub bounces current students back into the prospective site for fee info).
ask.unimelb.edu.au/app/answers/detail/a_id/	Legacy RightNow/Oracle FAQ where real fee answers live	OUTSIDE the canonical estate. students->ask = 444 contextual links (the hub's #1 outbound destination); 25 distinct fee answer IDs (Statement of Liability, Fee Account Statement, CSP). A separate un-owned system the student is dumped into.
my.unimelb.edu.au / forms.your.unimelb.edu.au / ecommerce.unimelb.edu.au	Authenticated/transactional core — where fees are actually paid (uncrawled)	students->forms=260, students->my.unimelb=187, students->ecommerce=67. The real fee action (view balance, pay, FEE-HELP/CSP forms) is behind login; public pages only narrate it.
law.unimelb / fbe.unimelb / arts.unimelb graduate-research & coursework fee pages (8)	Faculty-level HDR/coursework fee variants	Genuine but duplicative: e.g. law/study/graduate-research-degrees/fees-and-scholarships, fbe PhD stipend-and-fee-remission, arts graduate-coursework/fees-and-payments + a faculty-local census-dates page — parallel to the central hub's equivalents.

The seams a student hits

- students -> ask.unimelb: 444 contextual links (hub's #1 outbound target) — students are bounced out of the estate into a legacy FAQ for fee answers; 76 such links from just 7 hub fee pages, to 25 distinct answer IDs.
- study <-> students reverse-funnel: study->students=373 and students->study=125 — the hub sends current students BACK into the prospective site (and its 348 per-course fee tabs) to find fee figures, a circular catalogue/admin seam.
- /admin/census-dates -> /page-not-found: a fee/census entry point that is dead (rel=canonical to page-not-found, listed in dead-pages.csv) yet still reachable from navigation.
- Public-hub -> authenticated core: students->forms.your.unimelb=260, students->my.unimelb=187, students->ecommerce=67 — the description-to-action handoff crosses into login-walled systems with no continuity of context.
- Three on-hub trees (/course-admin/, /your-course/, /admin/fees/) for the same content force the student (and search engines) to disambiguate duplicates that only differ by canonical tag.
- Faculty HDR fee pages (law/fbe/arts) sit parallel to the central hub with no clear 'this supersedes' relationship — an HDR student can land on either.

Duplication

- Triple on-hub fee tree: /course-admin/* (canonical) vs /your-course/manage-your-course/fees-and-payments/* vs /admin/fees/* — all live, all resolve to the same canonical content (paying-your-fees, fee-remission, census-dates duplicated across all three).
- ?in_c=sinfo-Navigation... tracking-parameter twins: paying-your-fees, understanding-your-fees, census-dates, fee-remission each crawled twice (clean + ?in_c=) — inflating the 29-row hub count to ~10 real pages.
- Per-course fee duplication at scale: 348 near-identical /find/courses//fees/ tabs on study.unimelb, one per program, none of which is the current-student fee service.
- 'Paying your fees' exists as both /course-admin/paying-your-fees and split domestic-students / international-students children in two different trees.
- Faculty HDR fee/remission pages (law graduate-research fees, fbe PhD stipend-and-fee-remission, arts graduate-coursework fees-and-payments) duplicate the central hub's fee-remission and HELP/CSP content at faculty level.
- A faculty-local census-dates page (arts/students/graduate-coursework/census-dates) duplicates the hub's authoritative census-dates.

Consolidation action. Consolidate to a single canonical fee home at students.unimelb.edu.au/course-admin/ and make it self-sufficient. Concretely: (1) collapse the /your-course/ and /admin/fees/ alias trees into /course-admin/ with 301 redirects (not just rel=canonical) and strip the ?in_c= twins, taking the public footprint from ~27 indexed rows to ~10 authoritative pages; (2) fix the broken census entry — restore /admin/census-dates or 301 it to /course-admin/census-dates so the dead /page-not-found canonical is eliminated; (3) repatriate the 25 legacy ask.unimelb fee answers (Statement of Liability, Fee Account Statement, CSP/FEE-HELP eligibility) INTO the /course-admin/ pages and retire those 444 outbound FAQ links — fee answers should not require leaving the estate; (4) break the reverse-funnel by hosting the authoritative current-student fee-rates/student-contribution content on the hub and linking study.unimelb's /how-to-apply/fees to it, rather than the hub linking out to the prospective site (cut the 125 students->study fee links); (5) keep the per-course /find/courses/.../fees/ tabs as prospective-only and exclude them from current-student search/IA; (6) give the authenticated handoffs (my.unimelb statement, ecommerce payment, FEE-HELP forms) one consistent, well-labelled launch pattern from the canonical pages — replacing the 6+ inconsistent my.unimelb anchor labels — so the description-to-action seam is obvious. Faculty HDR fee pages should defer to (and deep-link) the central hub, retaining only genuinely faculty-specific stipend/remission detail.

equity, disability & Indigenous (Student Equity & Disability Services / Access Melbourne / Murrup Barak) [HIGH]

The estate's single most equity-damaging fragmentation: the actual disability service is forked across three parallel URL trees on its own hub with a self-contradicting registration wizard, while the Indigenous student service (Murrup Barak) has effectively zero presence on students.unimelb and lives entirely on an uncrawled off-hub domain reached only by a stray "related links" card.

True footprint. Raw classifier = 610 pages across 17 domains, but this is dominated by topic-keyword false positives. Filtering (drop /our-research, /news-and-events, /publications, /people, /about, podcast/episode/seminar/oration titles, /print catalogue, research.unimelb portal, and 11 explicit 404s): 431 of 610 are faculty research/news/about (e.g. arts "Gender Equity Initiative" research unit, eng "Return to Country" oration, edu "Indigenous Wisdom" podcast), 33 are research.unimelb portal, 6 are handbook catalogue subjects (INDG10001, sc-crimfd), 11 are dead pages. TRUE current-student-facing footprint ≈ 129 pages, and the genuine CENTRAL SERVICE core is far smaller: only ~19 live SEDS pages on students.unimelb (the real disability/equity service) + ~33 faculty current-student touchpoints (mostly faculty "Indigenous Student Experience" pages) + 6 Indigenous scholarship awards. Access Melbourne (~71 study.unimelb pages) is an admissions/entry scheme on the PROSPECTIVE domain, not a current-student service. Murrup Barak (Indigenous student support) = 0 crawled pages (separate uncrawled domain).

Canonical owner. students.unimelb.edu.au is the correct owner for the disability/equity half and it IS reached — but it owns only ~19 pages and even those are split across 3 parallel trees. The Indigenous half has NO canonical owner inside the crawled hub: it belongs on students.unimelb but is delegated wholesale to murrupbarak.unimelb.edu.au, a dedicated central subdomain that was NOT crawled (not among the 20 domains) and is linked from students.unimelb only 19 times vs 614 from msd — so the central hub barely points to it. Access Melbourne's owner is study.unimelb (prospective), with no current-student equivalent. Net: disability = reached-but-fragmented; Indigenous = canonically homeless on the hub.

Where it lives

Location	Role	Note
students.unimelb.edu.au/support-and-wellbeing/student-equity-and-disability-services (+ /prepare-to-register, /create-your-plan, /action-your-plan, /registration-for-ongoing-support, /accessibility-resources, /seds-privacy-information)	The real central disability/equity SERVICE + 4-step registration wizard (the most complete of the three trees, 10 of the 19 hub pages)	Links Murrup Barak only as one 'related links' card - > https://murrupbarak.unimelb.edu.au/ (off-hub). Registration action is actually 'Submit an enquiry' -> external Salesforce form forms.your.unimelb.edu.au/4747166, not an integrated system.
students.unimelb.edu.au/student-support/student-equity-and-disability-services AND .../student-equity-and-disability-support	Two PARALLEL legacy copies of the same SEDS service + a duplicate registration wizard	The forked wizard: the /student-support/ copy's 'Step 1: Prepare to register' link points BACK into the /support-and-wellbeing/ tree -> a student who enters via one tree is silently bounced to the other mid-flow. 'SEDS' landing title resolves at 7 URLs across 3 trees.
students.unimelb.edu.au/sandbox/content-models/student-equity-and-disability-services	Unpublished staging/sandbox copy of the SEDS page leaked into the public crawl	A 4th tree — a CMS 'sandbox' draft is publicly reachable and was indexed, adding a non-canonical duplicate of the same service.
murrupbarak.unimelb.edu.au	The ACTUAL Indigenous student support service (Murrup Barak)	Entirely off-hub and uncrawled. Inbound contextual links: msd 614, study 79, mdhs 49, students.unimelb only 19. The central current-students hub almost ignores it; the built-environment faculty (msd) is its largest referrer via a templated footer.
study.unimelb.edu.au/how-to-apply/equity-entry-schemes/access-melbourne-undergraduate (+ /how-to-apply/special-entry-access-schemes/access-melbourne-undergraduate)	Access Melbourne low-SES entry scheme — and its OWN internal fork	~71 pages but on the PROSPECTIVE-student domain; two parallel path trees (equity-entry-schemes vs special-entry-access-schemes) host duplicate Access Melbourne + eligibility-calculator pages. No current-student continuation on students.unimelb.
Faculty domains (arts 150, mdhs 78, law 46, fbe 43, medicine 40, eng 40, finearts-music 30, ...)	Overwhelmingly false positives: research units, faculty news, podcasts, faculty-specific Indigenous scholarships/outreach	~431/610 raw hits. A thin minority are genuine faculty current-student pages (e.g. eng 'Indigenous Student Experience'); these duplicate, not consolidate, the central service.

The seams a student hits

- Indigenous service is off-hub: the central students.unimelb hub reaches Murrup Barak only via a single 'related links' card to murrupbarak.unimelb.edu.au (19 links vs msd's 614). The Indigenous student journey leaves the hub entirely and lands on a separate, uncrawled site with no shared IA.
- Forked registration wizard contradicts itself: the /student-support/ tree's 'Step 1: Prepare to register' jumps the student into the /support-and-wellbeing/ tree, so entering the wizard from one tree silently relocates you to a parallel one — and the real 'register' action is an external Salesforce enquiry form (forms.your.unimelb.edu.au/4747166), not a registration system.
- Broken hub page on the equity journey: students.unimelb.edu.au/.../support-for-cultural-or-religious-observance returns 'Page not found' (in dead-pages.csv) — a cultural/religious-observance touchpoint (Indigenous/faith equity) is dead on the central hub itself.
- Label inconsistency for the Indigenous destination: murrupbarak is anchored as 'Indigenous Students' (611, the dominant label, which never names the service), 'Murrup Barak' (47), 'Murrup Barak, the Melbourne Institute for...' (18), 'Visit Murrup Barak website' (5), 'Visit the Murrup Barak webpage' (1) — at least 6 distinct labels for one destination.
- Access Melbourne stranded on the prospective domain: the low-SES scheme sits under study.unimelb /how-to-apply with NO current-student bridge, and itself forks across /equity-entry-schemes/ and /special-entry-access-schemes/ duplicate trees, so a continuing student looking for equity support hits applicant-framed content via two competing URLs.
- Real action sits behind auth/external systems the crawl can't see: hub links push to my.unimelb (187), forms.your.unimelb (260), services.unimelb counsel/health (290) — the disability plan, accessibility software, and registration actually execute

behind login, so the public hub is only a signpost layer over an uncrawled core.

Duplication

- SEDS landing/service duplicated across 3 live URL trees on the SAME hub: /support-and-wellbeing/student-equity-and-disability-services, /student-support/student-equity-and-disability-services, and /student-support/student-equity-and-disability-support — the 'SEDS' landing title resolves at 7 distinct URLs.
- A 4th non-canonical copy: an unpublished /sandbox/content-models/student-equity-and-disability-services CMS draft is publicly crawlable.
- Registration wizard duplicated: 'prepare-to-register' and 'registration-for-ongoing-support' exist in both /student-support/ and /support-and-wellbeing/ trees, with cross-pointing 'Step 1' links.
- Access Melbourne duplicated across two study.unimelb trees (equity-entry-schemes vs special-entry-access-schemes), including duplicate Access Melbourne landing and eligibility-calculator pages.
- Indigenous content fragmented across faculty silos (faculty-specific Murrup Barak references + Indigenous scholarships on scholarships.unimelb, eng, edu) instead of one consolidated Indigenous student hub — plus 11 dead/404 Indigenous-tagged faculty pages (mdhs indigenous-development, medicine asq-trak, biomedical First Nations news).

Consolidation action. Collapse SEDS to ONE canonical tree on students.unimelb (keep /support-and-wellbeing/student-equity-and-disability-services as the single home; 301-redirect both /student-support/ copies and delete the /sandbox/ draft), and repair the registration wizard so all four steps live on and link within that one tree — eliminating the cross-tree bounce — with the external enquiry/registration form clearly framed as the action. Critically, give the Indigenous student service a first-class presence ON the hub: either bring Murrup Barak content into students.unimelb under a named 'Indigenous students' section or, at minimum, surface it as a primary navigation destination (not a single related-links card), standardise its anchor label to 'Murrup Barak (Indigenous student support)', and fix the dead cultural/religious-observance page. Add a current-student bridge from study.unimelb's Access Melbourne into the hub and dedupe its two entry-scheme trees. This is the highest-equity-impact consolidation in the estate: the students who most depend on a single clear path (disability, low-SES, Indigenous) currently face the most forked, off-hub, and broken one.

contacts, Stop 1 & help [MEDIUM]

Stop 1 is a strong, well-labelled canonical front door — but it is mirrored across 3 URL roots on the central site and physically copied into faculty trees, while the actual enquiry engine (ask.unimelb / my.unimelb forms) is invisible behind topic-named links and login, so "who do I ask" still resolves to N look-alike paths.

Spread: 17 domains · 61 URL trees · central-hub pages 68 · top owner students (68). **True footprint.** Raw classifier: 194 pages / 17 domains. Filtered TRUE current-student footprint ~= 76 unique pages (101 genuine rows before deduping query-string and byte-identical copies). I removed 93 look-alikes: research-centre and clinical-school "/contact-us" (medicine /school-structure/* x~20, law /centres/* x12, biomedical /departments//research/services/, fbe /cmd|/cosm|/ifb), alumni contact pages (www.unimelb/alumni/*, fbe/law/education alumni), conference/lab "enquiry" forms (next-lab, media-preparation, AVRU "Ask an Expert", cytometry), and stray keyword hits (law news "bush kids ask", finearts "ask Ellen Grimshaw", science podcast "how to ask good questions", study.unimelb/openday/questions-to-ask). Kept: all students.unimelb (68 raw -> 47 unique paths), services.unimelb health/counsel/childcare contact (4), and genuine faculty current-students/contact-us GR routing hubs (Education 8, MDHS 8) plus faculty generic front-door /contact-us (~10, one per faculty). **Canonical owner.** students.unimelb.edu.au is the canonical owner and IS reached: it is the top domain (47 unique genuine paths; 68 raw rows = 35% of raw, the single largest), the Stop 1 hub is the genuine "who do I ask" front door, and it is the most consistently labelled node in the whole estate ("Stop 1" anchor appears 754 times vs the next contact label in single digits). Faculty copies even carry rel=canonical back to it. The weakness is not ownership but that the owner's own URL space is split into parallel mirrors and the downstream enquiry engine (ask.unimelb / my.unimelb) is unbranded and behind login.

Where it lives

Location	Role	Note
students.unimelb.edu.au/support-and-wellbeing/stop-1 (+ /student-support/advice-and-help/stop-1 + /stop1/contact-stop-1)	Canonical Stop 1 hub — 12 category tiles (enrolment, fees,	All three URL roots serve a BYTE-IDENTICAL 195,569-byte page (verified by wc -c and identical link sets). One canonical hub

Location	Role	Note
	exams, visa, timetable, special consideration...), Parkville + Southbank walk-ins, call-us	published at 3 parallel paths; the page even links to its own mirror in the footer.
students.unimelb.edu.au/support-and-wellbeing/stop-1/call-us	Phone/contact channel for Stop 1	16 raw rows collapse to just 2 unique paths — the rest are pure UTM ?in_c=sinfo-digital-front-door... query variants from the 'I have a different question' button across enrolment/exams/timetable/visa journeys.
ask.unimelb.edu.au	The actual self-service enquiry / knowledge-base engine students are funnelled into	Largest contact destination: 444 contextual links from students.unimelb (plus 37 Education, 28 MDHS, 25 handbook). Crawled as a separate host — the real answers live here, not on the hub.
my.unimelb.edu.au + forms.your.unimelb.edu.au	Authenticated enquiry / student-centre case submission (the real 'ask a question' transaction)	BEHIND LOGIN, uncrawled. students.unimelb -> my.unimelb 187 links, -> forms.your.unimelb 260 links (study.unimelb adds 1,493). The transactional core of 'help' is invisible to this audit and to logged-out students/search.
mdhs.unimelb.edu.au/research/research-training/current-students/contact-us/{stop1,ask-unimelb,gras,it-support} and education.unimelb.edu.au/study/graduate-research/current-students/contact-us/{stop-1,ask-unimelb,it-support,gr-administrators}	Faculty HDR contact-routing hubs that re-wrap central services under faculty URLs	The MDHS /contact-us/stop1 page is a 195,279-byte near-copy of the central Stop 1 page with rel=canonical to students.unimelb, yet has ZERO crawlable outbound links to ask.unimelb/Stop 1 — a faculty-branded dead-end duplicate. Genuine HDR-specific value (GR administrators, examinations teams) is mixed in with these copies.
services.unimelb.edu.au/{health,counsel,childcare}/contact-us and www.unimelb.edu.au/contact	Separate central contact points for specialist services and the university-wide switchboard	Parallel 'contact' surfaces outside the Stop 1 frame — a student looking for 'who do I ask' can land on the university switchboard or a service-specific contact-us with no link back into Stop 1.

The seams a student hits

- ask.unimelb is the #1 enquiry destination (444 links from central) but is almost NEVER labelled as a contact channel — the only kept anchor labels are topic strings: 'Statement of Liability' (11), 'Fee Account Statement' (9), 'check your enrolment' (8), 'Commonwealth Supported Place' (8), '100 points of identification' (7), "'at risk' status" (7). A student cannot tell these links all lead to the same 'ask a question' system.
- Faculty 'Stop 1' / 'ask.unimelb' wrapper pages (MDHS, Education GR trees) are full content copies with canonical pointing home but ZERO crawlable handoff link — verified 0 non-faculty outlinks on MDHS /contact-us/stop1, /ask-unimelb, /mdhs-gr. The handoff relies on a client-side iframe the crawler (and arguably the student's click) cannot follow.
- A live 404 sits INSIDE the canonical hub: students.unimelb.edu.au/support-and-wellbeing/stop-1/categories/more-services returns 'Page not found' (in dead-pages.csv) — a broken tile on the main contact page.
- The real transactional 'help' (case/enquiry submission) is behind login: my.unimelb (187 links) and forms.your.unimelb (260 links) are uncrawled, so the logged-out estate dead-ends at a login wall with no public preview of what asking actually involves.
- Cross-site inbound is lopsided and UTM-polluted: faculties point students at the hub (Education 275, Eng 224, Arts 191, MDHS 175 links into students.unimelb) but the hub's own footer cross-links its mirror tree, and 21 of 68 central rows are duplicate ? in_c= UTM variants — search engines and analytics see many URLs for one page.

Duplication

- Stop 1 hub published at 3 byte-identical URL roots on the central site: /support-and-wellbeing/stop-1 (18 paths), /student-support/advice-and-help/stop-1 (9 paths, an exact mirror — 8 shared sub-paths incl /call-us and every /categories/* tile), and /stop1/contact-stop-1 — all serving the same 195,569-byte file.
- Faculties physically copy the central Stop 1 page into their own trees: MDHS /research/.../contact-us/stop1 and Education /study/.../contact-us/stop-1 are ~195KB near-duplicates of the central page with rel=canonical back to students.unimelb (i.e. the CMS replicates the whole page rather than linking).
- Stop 1 AI Assistant duplicated across two parallel governance paths: /student-life/how-we-listen/our-commitment-to-transforming-student-services/stop-1-AI-assistant and /student-life/student-voice/our-commitment-to-transforming-student-services/stop-1-AI-assistant.
- Study-overseas help-and-support duplicated across two central trees — /your-course/study-overseas/* (5) and /course-admin/study-overseas/* (10) share leaf pages administrative-support, funding-options, plan-your-budget, scholarships.
- 61 url_trees / frag_score 1037 (per service-fragmentation.csv) is inflated by ~21 UTM ?in_c= query-string variants of the same /stop-1 and /call-us pages counted as distinct URLs.

Consolidation action. Keep students.unimelb Stop 1 as the single canonical hub, then consolidate the wrappers: (1) collapse the parallel central URL roots — pick /support-and-wellbeing/stop-1 and 301-redirect /student-support/advice-and-help/stop-1, /stop1/*, and the duplicate study-overseas + AI-assistant trees into it (kill the /categories/more-services 404); (2) replace faculty Stop 1 / ask.unimelb page COPIES (MDHS, Education GR trees) with thin redirect/link cards to the canonical hub, retaining only genuinely faculty-specific HDR contacts (GR administrators, examinations teams) as a short 'faculty contacts' panel that links up to Stop 1; (3) brand the enquiry engine — give every link to ask.unimelb a consistent recognisable label ('Ask the University / ask.unimelb') instead of topic strings, and surface the my.unimelb enquiry/case channel with a public 'how asking works' preview so the path from 'who do I ask' -> Stop 1 -> ask.unimelb -> logged-in enquiry is one labelled spine, not 17 domains of look-alikes.

exams, results & progress [MEDIUM]

The central students.unimelb hub genuinely owns coursework exams/results and every faculty links into it, but the service is fractured by the hub running its OWN content under two parallel URL trees, special consideration scattered across three hub paths plus six faculty trees, and HDR thesis-examination authored byte-identically in two faculties while the real HDR owner (gradresearch) sits unreached behind the split.

Spread: 16 domains · 62 URL trees · central-hub pages 93 · top owner handbook (145). **True footprint.** Raw classifier: 472 pages across 16 domains (frag_score 992). After stripping ?in_c tracking-param duplicate URLs the real estate is ~397 unique URLs; filtering false positives yields a TRUE current-student footprint of ~110-115 genuine pages. Removed: 145 handbook.unimelb /2026/subjects pages (course CATALOGUE assessment blurbs, not exam admin); 133 research-centre look-alikes (arts Language Testing Research Centre, medicine/mdhs medical-education RESEARCH groups, education AERC/Melbourne-Metrics/REEaCh, msd BELT teaching-quality, fbe WCLA academic-language) caught on stray 'assessment'/'exam'/'results' keywords; 7 study.unimelb prospective how-to-apply pages. Of the genuine ~114: students.unimelb 78, education 13, eng/finearts 4 each, mdhs/medicine 3, fbe/law/research 2, the rest 1. **Canonical owner.** students.unimelb.edu.au is the correct canonical owner and IS reached — it holds the dominant footprint (78 of ~114 genuine pages) and is the gravitational centre of the estate: every faculty links inbound (msd 8069, handbook 1193, study 373, education 275, eng 224, arts 191 contextual links). The real transactional core, however, lives BEHIND LOGIN and is uncrawled: the hub routes outward to my.unimelb (results/grades, labelled 'my.unimelb'/'Student portal', 187 links), forms.your.unimelb (special-consideration application + enquiry forms, 260 links) and ask.unimelb (academic-progress/'at risk' and statement-of-results FAQs, 444 links). So the canonical owner is reached but is a signposting layer in front of the authenticated action.

Where it lives

Location	Role	Note
students.unimelb.edu.au/course-admin/exams (+ /results, /wam, /academic-progress, /special-	Legacy canonical exams/results/progress hub	20 genuine pages on this tree. Contains the substantive content: exam types (on-campus written/digital, off-campus open-book, Cadmus/LMS

Location	Role	Note
consideration, /academic-transcripts-and-statements)	tree — the flat course-admin IA	guides), exam dates/timetable, rules, WAM, results, grading schemes, special & supplementary exams.
students.unimelb.edu.au/your-course/manage-your-course/exams-assessments-and-results/...	Parallel NEW canonical tree mirroring the same service under a deeper nested IA	28 genuine pages. /exams here is the SAME page as /course-admin/exams — identical title and identical outbound link set. The estate is mid-migration with both IAs live simultaneously: pure internal duplication a student can land in either via search.
students.unimelb.edu.au/support-and-wellbeing/stop-1/categories/special-consideration	Third hub home for special consideration, under the Stop 1 service-desk tree	Special consideration is authored in THREE distinct students.unimelb paths (course-admin, manage-your-course, and stop-1/categories) — same service framed as admin, as course-management, and as a wellbeing/service-desk category.
forms.your.unimelb.edu.au / my.unimelb.edu.au / ask.unimelb.edu.au	The real action layer behind login (uncrawled)	Where students actually DO the task: submit special consideration (forms.your, 260 links from hub), view results/grades (my.unimelb, 187), resolve academic-progress/'at risk' and order statements (ask.unimelb, 444). The public pages are wrappers around these.
education.unimelb.edu.au/study/current-students/extension-assessment-information-and-policies/* and finearts-music/current-students/assessment-and-exams/*	Faculty-authored parallel exam/assessment/special-consideration content	Faculties re-author rather than defer: education has its own special-consideration, reassessment, attendance-hurdles, FoE penalties/extensions pages (13 genuine); FFAM authors Conservatorium performance examinations + assessment forms (4). Local rules layered on top of, and competing with, the central hub.
education.unimelb.edu.au/study/graduate-research/.../thesisexamination/* and mdhs.unimelb.edu.au/research/research-training/.../thesisexamination/*	HDR thesis-examination content duplicated verbatim across two faculties	near-duplicates.csv cluster 4.1_HDR_education_vs_mdhs: 5 thesisexamination pages are byte-identical (jaccard 1.0, word counts match exactly) between education and mdhs. The genuine central HDR owner gradresearch.unimelb has ZERO crawled exam pages — HDR examination is fragmented into faculty copies instead of the dedicated HDR site.

The seams a student hits

- Dual-IA seam on the hub itself: /course-admin/exams and /your-course/manage-your-course/exams-assessments-and-results/exams are the same content at two live URLs — a student arriving from search or an old bookmark sees a different path/breadcrumb for the identical page, and link equity is split between the two trees.
- Special-consideration seam: three different hub entry points (course-admin admin tree, manage-your-course tree, stop-1 wellbeing-category tree) plus six faculty special-con pages (education, msd, law, eng + study/prospective). The 'how do I apply' answer depends on which door the student came through; only the deepest hop reaches the forms.your.unimelb application.
- Academic-progress / unsatisfactory ('at risk') seam: the hub page leans on ask.unimelb (9 contextual links to the FAQ knowledge base) and hands HDR cases sideways to gradresearch (3) and services.unimelb (3) — coursework progress, HDR progress, and the policy/appeal route fan out to three different destinations with no single landing page.
- Public-to-authenticated seam: the actual exam timetable, results release and special-con submission all live behind my.unimelb / forms.your.unimelb / ask.unimelb. The crawlable pages are signposts; the student crosses a login boundary mid-journey, and the public anchor text for the form layer is generic ('Enquire', 'Register for updates', 'Submit an enquiry') rather than 'Apply for special consideration'.
- HDR examination seam: a research candidate is routed into education OR mdhs faculty trees for thesis-examination guidance (identical text in both) rather than to the canonical gradresearch.unimelb HDR site, which the crawl shows holds no exam pages — the owner that SHOULD consolidate HDR exams is bypassed.

Duplication

- Hub internal dual-tree: legacy /course-admin/exams|results|wam|special-consideration|academic-progress fully mirrored by /your-course/manage-your-course/exams-assessments-and-results/* — verified identical page (same title, identical outbound link set) for /exams; ~20 vs ~28 pages, both live.
- Special consideration authored 3x within students.unimelb (course-admin, manage-your-course, stop-1/categories) — same service, three IAs.
- HDR thesis-examination byte-identical across education.unimelb and mdhs.unimelb: 5 thesisexamination/* pages at jaccard 1.0 (near-duplicates.csv cluster 4.1_HDR_education_vs_mdhs), word counts matching to the digit.
- Faculty-local re-authoring of coursework assessment rules (education extension/reassessment/penalties/special-con; FFAM Conservatorium exams; fbe/law local assessment pages) layered over the central hub rather than deep-linking to it — ~25 genuine faculty pages duplicating service framing.
- Tracking-param URL bloat: 472 raw rows collapse to ~397 unique URLs; ~75 are ?in_c= analytics variants of the same hub pages (e.g. /course-admin/exams appears 3+ times), inflating the apparent footprint.

Consolidation action. Keep students.unimelb.edu.au as the single canonical owner and collapse the redundancy rather than rebuild — the centre already holds and faculties already point in. (1) Finish the IA migration and retire ONE of the two parallel trees (course-admin vs manage-your-course), 301-redirecting the deprecated paths so there is exactly one URL per exam/results/WAM/progress page. (2) Designate one canonical special-consideration page and redirect the other two hub copies into it; convert the six faculty special-con pages and education's extension/reassessment pages into thin 'faculty-specific rules' stubs that deep-link to the central page and the forms.your application, not standalone re-authored content. (3) Move HDR thesis-examination to gradresearch.unimelb as the single source of truth and replace the byte-identical education/mdhs copies with links to it (kills near-dup cluster 4.1 at the root). (4) Make the public→authenticated seam explicit: label the action links as their task ('Apply for special consideration', 'View your results in my.unimelb') instead of generic 'Enquire'/'Register'. (5) Strip ? in_c tracking variants from canonical/sitemap URLs. Net effect: ~114 genuine pages consolidate toward a single hub tree with faculties as deep-linking satellites.

graduation & transition [MEDIUM]

Graduation has a clean, single-owner apply-to-graduate spine on students.unimelb, but it is split into two parallel URL trees, hands its live transactions to login/forms/vendor systems, and severs the graduate→alumni transition entirely — 0 contextual links from any completion page into the alumni estate.

Spread: 16 domains · 53 URL trees · central-hub pages 36 · top owner www (137). True footprint. Raw classifier: 803 pages across 16 domains. TRUE current-student footprint: ~35 pages, ALL on students.unimelb.edu.au. Filtering (bucketed all 803 by URL): 137 are the www.unimelb.edu.au/alumni estate (post-graduation, not the service); 569 are faculty false-positives — alumni magazines (medicine/Chiron 128, dental/Dent-AL 83), "faces-of-[faculty]" alumni profiles (education 85, law 63, biomedsci 51), and "PhD completion seminar" / "Accounting Hall of Fame awards ceremony" news (fbe 101) matched on stray "graduat*/ceremony/alumni" keywords; 6 are prospective/accommodation pages (study.unimelb VCE-equivalent "graduation certificates", residence "alumni" pages); 2 scholarships.unimelb are "alumni scholarship" awards. After stripping all of that, the genuine service = 23 pages under students.unimelb/course-admin/graduation/* + 5 duplicate pages under the legacy your-course/manage-your-course/graduation/* tree + testamur/AHEGS/third-party-forms (6) + 1 Stop 1 category page = ~35. No faculty domain authors any real apply-to-graduate content. **Canonical owner.** students.unimelb.edu.au is the canonical owner and IS reached — it holds 100% of the true service. The live ceremony/apply transactions sit BEHIND LOGIN at my.unimelb.edu.au (uncrawled): the hub links out to my.unimelb 18 times (apply/defer conferral via my.unimelb/student-admin/graduation, STUDYPLN), document fulfilment goes to ecommerce.unimelb (AHEGS hardcopy/digital) and an eStudent.aspx qualification-verification app, and all enquiries funnel to one Salesforce form (forms.your.unimelb/4747166, 47 links). So the public estate is the shop-window; the real action is auth-gated. The downstream owner of the *transition* — the alumni estate — is NOT reached from the spine.

Where it lives

Location	Role	Note
students.unimelb.edu.au/course-admin/graduation/* (hub 7750e75f, 60 links, 268KB)	Live canonical apply-to-graduate spine: ceremony-dates, conferral-dates, graduation-day (Bachelor/master + separate PhD/higher-doctoral), fees-tickets-and-gown-hire, ceremony-recordings, photos-and-merchandise	23 pages. The real owner. ceremony-dates & conferral-dates render as login walls ('University of Melbourne - Sign In').
students.unimelb.edu.au/your-course/manage-your-course/graduation/*	Parallel DUPLICATE of the same hub (9efc8fa2, 60 links, 268,512 bytes vs the course-admin hub's 268,796) plus duplicate testamur/AHEGS/third-party-forms under a second transcripts path	5 graduation pages + 3 transcript pages. Two complete URL trees for identical content — students reach the service via two different IA paths.
my.unimelb.edu.au/student-admin/graduation + /sone/STUDYPLN (BEHIND LOGIN, uncrawled)	Where graduates actually apply to graduate, defer conferral, and manage the ceremony booking	18 outbound links from the spine point here; this is the transactional core the public pages merely describe.
www.unimelb.edu.au/alumni/ * (137 pages) + www.alumni.unimelb.edu.au + secure.alumni.unimelb.edu.au	The destination of the graduate→alumni transition: welcome-new-alumni, support-resources, career-support, stay-connected; events/registration on secure.alumni	Three separate hosts for the alumni estate. Receives 6,404 contextual cross-site links total into www.unimelb.edu.au , but only 64 originate from the ENTIRE students.unimelb site and 0 from the graduation spine.
forms.your.unimelb.edu.au/4747166 (Salesforce) + ecommerce.unimelb.edu.au + Reed Graduations (createsend external) + ask.unimelb.edu.au FAQs	Satellite transaction/enquiry endpoints: single graduation enquiry form (47 links), AHEGS/testamur fulfilment, gown-hire vendor, FAQ deflection (11 links)	The spine is a router to 4+ external systems on different hosts; no single integrated graduation journey.

The seams a student hits

- GRADUATE→ALUMNI HANDOFF IS STRUCTURALLY ABSENT: across all 33 graduation/completion spine pages, 0 contextual links to /alumni (verified over raw links.json). The only path 'graduate to alumnus' is the global footer 'Alumni' nav link — chrome, identical to 'Giving' (both anchor-text count 835). students.unimelb→www.unimelb.edu.au is just 64 contextual links total, none from completion pages.
- PUBLIC→AUTH WALL mid-journey: ceremony-dates and conferral-dates resolve to a Sign-In page (6 spine URLs titled 'University of Melbourne - Sign In'); the apply/defer transaction lives at my.unimelb. A student researching graduation hits a login wall inside the public spine with no preview of what's behind it.
- PUBLIC→VENDOR/FORM hops: gown hire bounces to an external Reed Graduations email-campaign URL (createsend1.com); AHEGS/testamur bounce to ecommerce.unimelb; every enquiry bounces to one Salesforce form host (forms.your.unimelb). Four different off-site systems with no unified status view.
- TWO-PATH IA: the same graduation content is reachable via /course-admin/graduation AND /your-course/manage-your-course/graduation, so inbound links, search results, and bookmarks fragment across two equivalent trees.
- HDR completion has the same break: the PhD/higher-doctoral graduation-day page links only to the enquiry form and the gowns vendor — no link to the alumni estate and no contextual link back to gradresearch.unimelb (students→gradresearch is 60 links estate-wide, none from the graduation spine).

Duplication

- Parallel graduation hubs: students.unimelb/course-admin/graduation (23 pages) vs students.unimelb/your-course/manage-your-course/graduation (5 pages) — the two hub pages are 268,796 vs 268,512 bytes with identical 60-link counts, i.e. the same page served at two URLs.
- Duplicate testamur / AHEGS / third-party-forms pages exist under BOTH /course-admin/academic-transcripts-and-statements/ and /your-course/manage-your-course/exams-assessments-and-results/results-and-academic-statements/academic-transcripts-and-statements/ — same documents, two deep paths.

- Alumni-welcome content fragmented across three hosts (www.unimelb.edu.au/alumni, www.alumni.unimelb.edu.au, secure.alumni.unimelb.edu.au), so the 'you are now an alumnus' destination has no single canonical URL.
- Faculty-level 'graduation/alumni' duplication of intent (alumni magazines, awards ceremonies, alumni profiles across medicine/dental/fbe/law/education) — not the admin service, but it dilutes search and means 'graduation' as a concept is authored in dozens of disconnected faculty silos.

Consolidation action. Keep students.unimelb.edu.au/course-admin/graduation as the single canonical owner and (1) collapse the duplicate your-course/manage-your-course/graduation + duplicate transcripts trees into 301 redirects to it, eliminating the two-path IA; (2) close the alumni seam — add an explicit, contextual 'You're about to become an alumnus' module on the conferral/graduation-day/AHEGS completion pages linking to www.unimelb.edu.au/alumni/support-resources/welcome-new-alumni (turning the current 0 contextual links into a deliberate handoff), and add the same on the PhD graduation-day page; (3) consolidate the three alumni hosts behind one canonical alumni URL; (4) surface what's behind the [my.unimelb](http://my.unimelb.edu.au) login wall with a clear 'sign in to apply/defer' affordance and status preview rather than an unexplained Sign-In page mid-journey. This is medium (not high) severity because authorship is already single-owner and clean — the fragmentation is in the duplicate URL trees and the missing forward handoff, both low-effort to fix — but it is the estate's clearest example of a structurally severed lifecycle transition.

enrolment & subjects [MEDIUM]

The enrolment-admin service has a clear canonical owner (students.unimelb.edu.au) and a clean handoff to the [my.unimelb](http://my.unimelb.edu.au) action, but it is fragmented INTERNALLY by two parallel URL trees holding duplicate copies of every leaf page, a dead canonical re-enrol link, and inconsistent labelling of the one place students actually transact.

Spread: 13 domains · 28 URL trees · central-hub pages 86 · top owner handbook (2560). **True footprint.** Raw classifier count is 3,710 pages across 13 domains, but only ~130-150 are genuine current-student enrolment ADMIN. The bulk is catalogue: [handbook.unimelb](http://handbook.unimelb.edu.au) 2,560 (1,940 under [/2026/subjects/](http://2026/subjects/) + 620 under [/subjects/](http://subjects/) = the subject/course CATALOGUE, excluded per brief) and MSD 970, of which 938 are [/current-students/subject-information/](http://current-students/subject-information/)* (architecture studio/quota/travel subject listings = catalogue-like, excluded) leaving only ~28 MSD admin pages ([/enrolment/](http://enrolment/), [/course-planning/](http://course-planning/)). [study.unimelb](http://study.unimelb.edu.au)'s 11 are PROSPECTIVE ([/how-to-apply/](http://how-to-apply/)...offers-and-enrolments, extension-program), excluded. Filter method: dropped any URL under [/subjects/](http://subjects/), [/2026/](http://2026/), [handbook.*](http://handbook.unimelb.edu.au) wholesale, MSD [/subject-information/](http://subject-information/), and [study.unimelb /how-to-apply/](http://study.unimelb.edu.au/how-to-apply/); kept [students.unimelb /course-admin/](http://students.unimelb.edu.au/course-admin/) + [/your-course/manage-your-course/](http://your-course/manage-your-course/)*-enrolment + faculty [/students/.../enrolment|studies](http://students.unimelb.edu.au/.../enrolment|studies) pages. TRUE footprint ≈ [students.unimelb](http://students.unimelb.edu.au) 86 (itself ~2x inflated by dual trees → ~45 unique admin pages) + faculty enrolment/course-planning landing pages: law ~10 (the rest are [/subjects/](http://subjects/) catalogue), MSD ~28, education ~6, arts/eng/fbe/biomed/mdhs ~2-5 each. **Canonical owner.** students.unimelb.edu.au is the unambiguous canonical owner and IS reached — it is the #1 cross-site link destination from every faculty (MSD 8,069 contextual links, handbook 1,193, study 373, education 275, eng 224, arts 191, mdhs 175, fbe 131, biomed 130, law 99 — cross-site-flow.csv), and its enrolment pages are among the highest-inbound in the whole estate (hubs.csv: enrolling-in-subjects 647, leave-of-absence 636, course-withdrawal 630, overloading 616). The actual TRANSACTION, however, lives behind login at my.unimelb.edu.au ("Go to [my.unimelb](http://my.unimelb.edu.au) to enrol" is the call-to-action on [students.unimelb/course-admin/enrolling-in-subjects](http://students.unimelb.edu.au/course-admin/enrolling-in-subjects)) and is uncrawled; the public estate is signposting only.

Where it lives

Location	Role	Note
students.unimelb.edu.au/your-course/manage-your-course/course-enrolment + subject-enrolment + planning-your-course-and-subjects/study-load	De-facto canonical content tree (high-inbound; faculties link here)	Holds enrolling-in-subjects (647 inbound), leave-of-absence (636), course-withdrawal (630), overloading (616), subject-withdrawal. This is where the estate actually points.
students.unimelb.edu.au/course-admin/ * (and /admin/re-enrol)	Parallel SHORT-alias tree of the same content	Duplicate copies of the identical leaf pages (leave-of-absence, course-withdrawal, overloading, subject-withdrawal) under a shorter path; used by the hub's own nav/popular-pages. /admin/re-enrol returns Page not found (dead-pages.csv).
my.unimelb.edu.au	The actual enrolment ACTION (re-enrol,	Every admin page funnels here. Labelled inconsistently in anchors: 'my.unimelb' (103), 'Go to

Location	Role	Note
	add/drop subjects) — behind login, uncrawled	my.unimelb' (24), 'Visit My.unimelb' (12), 'Student portal' (4), 'Re-enrol now' (4) — anchor-text.csv.
handbook.unimelb.edu.au/2026/subjects/* and /subjects/*	Subject/course CATALOGUE (2,560) — NOT enrolment admin	Topic-keyword false positive; correctly the catalogue. Admin pages link to it as 'Handbook' for subject lookup, but you cannot enrol here.
Faculty enrolment landings: msd/current-students/enrolment, law/students/{jd,masters}/studies/enrolment, education/current-students	Per-faculty signpost pages that re-list the central service	MSD's /current-students/enrolment links out to ~13 students.unimelb /your-course/... pages (enrolling, leave-of-absence, overloading, withdrawal, Stop 1) — a faithful relay, but adds a faculty-specific hop and its own /subject-information catalogue (938 pages).

The seams a student hits

- INTERNAL dual-tree split on the owner site: the SAME leaf pages exist at both /course-admin/leave-of-absence and /your-course/manage-your-course/course-enrolment/leave-of-absence (verified identical for leave-of-absence, course-withdrawal, overloading, subject-withdrawal). Faculties link to the /your-course/ tree; the hub's own popular-pages link to /course-admin/ — a student following two routes lands on two different URLs for one service.
- BROKEN canonical link: students.unimelb.edu.au/admin/re-enrol returns 'Page not found' (dead-pages.csv), plus /your-course/.../requisite-waivers/_nocache and /eligibility-for-commonwealth-supported-places.../_nocache are dead — the re-enrol entry point a student bookmarks can 404.
- AUTH WALL hop: every public admin page ends at my.unimelb behind login, but it is labelled six different ways across the estate (my.unimelb / Go to my.unimelb / Visit My.unimelb / Student portal / Re-enrol now), so the single most important action has no consistent name.
- FACULTY relay hop: a student starting in their faculty (MSD/Law/Education) gets a faculty 'enrolment' page that simply re-points to students.unimelb — an extra navigation layer before reaching the real instructions, and Law/MSD interleave true admin with /subjects/ catalogue under the same /students/ tree.

Duplication

- students.unimelb hosts two full copies of the enrolment-admin content under /course-admin/* and /your-course/manage-your-course/* — confirmed duplicate leaf pages for leave-of-absence, course-withdrawal, overloading, subject-withdrawal (and enrolling-in-subjects exists in both as /course-admin/enrolling-in-subjects and /your-course/manage-your-course/subject-enrolment/enrolling-in-subjects). This ~doubles the 86 students.unimelb page count to ~45 unique.
- Each faculty re-publishes an enrolment landing page (MSD, Law JD + Masters, Education, Arts, Eng, FBE, Biomed, MDHS) that restates the central service rather than redirecting — 28 such facade/relay pages on MSD alone.
- 28 distinct URL-trees across 13 domains for one service (service-fragmentation.csv frag_score 364), the highest-volume of which is pure catalogue noise (handbook 2,560 + MSD subject-information 938).

Consolidation action. Consolidate to a SINGLE canonical enrolment-admin tree on students.unimelb and let the catalogue/auth-core stay where they belong. Concretely: (1) Pick ONE path tree — keep /your-course/manage-your-course/* (it carries the inbound links: 647/636/630/616) and 301-redirect the entire /course-admin/* alias to it, eliminating the duplicate copies. (2) Fix the dead /admin/re-enrol and the two dead _nocache pages so the re-enrol entry point resolves. (3) Standardise the my.unimelb call-to-action to one label ('Re-enrol / manage subjects in my.unimelb') everywhere it appears, since that auth core — not the public estate — is where the action actually happens. (4) Convert the faculty enrolment landing pages (MSD/Law/Education/etc.) from re-published copies into thin redirects or single-link signposts to the canonical students.unimelb pages, and keep /subject-information catalogue content clearly separated from admin. Do NOT touch handbook (correct catalogue owner). This collapses ~130 scattered admin/relay pages plus 1 dead link and 6 inconsistent labels into one owned, singly-named tree.

The consolidation map

Each pattern has one systemic fix; together they are the service-level expression of the central-and-spoke model.

Pattern	Systemic fix	Owner
1 · Hub duplicates itself	Finish the hub URL migration: pick one canonical root per service, 301 the legacy/duplicate trees, enforce a "no live inbound on two trees" check	Central platform
2 · Canonical owner unreachable / absent	For each service name ONE system of record (scholarships.unimelb, studentit.unimelb, gradresearch.unimelb, a new central WIL page) and make the hub deep-link it from the relevant task pages	Central + service owners
3 · Action behind login	Map the public→authenticated seam per service; expose the <i>action</i> (deep-link the my.unimelb/Canvas/form entry) from the public page, and confirm the logged-in side isn't already doing the linking	Central + my.unimelb
4 · Off-brand delivery host	Re-brand or sub-path shared hosts (surface Counselling/Health under a wellbeing-branded entry); use consistent destination labels	Service owners
5 · Reverse-funnel	Give enrolled students their own fees/careers/scholarships home on the hub; stop routing them back to study.unimelb	Central
6 · Faculty re-invention / clones	Mandate "link, don't re-host" in the standardised student overlay; 301 the byte-identical clones to the canonical page	Governance + faculties

The through-line: the centre mostly already holds — every faculty links into `students.unimelb`, and the hub is the right owner for most services. The work is not to *build* a centre; it is to **finish the hub's own migration, name the off-estate owners, and stop the faculties (and the hub itself) from duplicating what the centre already has.**

Source: per-service link-graph profiles in `analysis/student-services-profiles.json`; classifier + metrics in `analysis/full-scrape/service_fragmentation.py`, `service-fragmentation.csv`, `service-pages.csv`. The authenticated core (my.unimelb, Canvas) and off-estate service sites (studentit, gradresearch, services, safercommunity) were not crawled — claims about them are inferred from inbound links and noted per profile.
